## PREFACE.

The following announcement in the First Number of this work, in August, 1844, denotes its origin :
"More than thirty years have passed since, by a change of residence from Central to Western New York, the writer was first placed in a position to observe the Red Race of this continent. The public are apprised, that he had devoted several years of this period in exploratory journeys, in the valleys of the Mississippi and the Missouri, before he entered the service of the U. S. Government, as an Agent for these tribes. Two and twenty years of his life, he may add, have been passed in the various capacities of an Executive Agent, a Commissioner, and a Superintendant of Indian Affairs, for the Northern Department.
"Having received numerous letters of inquiry from various quarters on this head, since his return from the Eastern Hemisphere to his native State, it is supposed that a general interest may be felt to know something more fully of the results of his experience, observation and adventurous positions, in so wide a field. It is, in truth, to test this opinion, which is not, perhaps, well founded or general, that the following extracts and memoranda, selected from his notes and papers, are published. The design is to continue them for a few numbers, at convenient intervals, to enable the reader to form his own opinion on the subject.
"In making this essay, it was thought appropriate that a title for it should be selected from the language of the people, whose history and traits are brought into discussion. The term Oneóta is the name of one of these abonginal tribes (the Oneidas). It signifies, in the Mohawk dialect, the people who are sprung from a Rock. It is a term which will do as well as any for the entire race, until we obtain better lights."

In giving to these detached issues a consolidated form, the author has thought that some further notice of his plan and details would not be inappropriate.

Some readers have expressed to him strong objections to the retention of the title Onzóta, as a synonym for the volume; others have been equally candid in their disapproval of the plan of a miscellany; but while he respects the opinions of friends, he has not been able to yield to the force of these objections. No one has so complete a view of the materials at his command, as the author himself. It still appears to him that a term derived from one of the languages of the people who are the subject of remark, is best suited to give individuality to the work; while the materials themselves, being chiefly membra disjecta of his researches and studies in the American forest, naturally assume a miscellaneous aspect. The work is, indeed, essentially a miscellany; its papers are, to a great extent, independent of each other, often diverse in their subject, and owing their character to witnesses living at, or traditions gleaned from, remote places; and no attempt has been made, or was originally designed, to digest them into a compact whole.

In the courge of many years of seclusion in scenes and wituations very favorabla for making observations on the Race, whose traits and charecter constitute the chief topics of remark, his portfoliog had become crowded with materials and notes, sometimes hastily accumulated, which, it was boped, there would be a suitable occasion, at some future period, to prepare for the press. But these accumulations in the various departments of oral legends, customs, language, history, picture-writing, antiquities, geographical names, \&ce, assumed such a shape as to require oluch leisure for their consideration, und rendered it less and less probable, every year, that this amount of leisure could be had. Beaides, he douhted in the end, and as years advanced, whether he should not be doing better to print the rough materiais of this part of his collection, than to attempt to give a polish and elementary completeness to them, which, after all his best efforts, it might be found more appropriately the vocation of another to execute.
Some exceptions to this remark there were, arising from several causes:

1. That branch of the inquiry consisting of the geograpbical names of the native tribes for the local divisions and features of the continent, in all its length and breadth, it had been a long cherished object with him to make as full and complete as possihle, and the results have been, to a great extent, prepared under the title of a Cyclopedia, or Ethnographical Gazetteer and Geographical and Historical Dictionary.
2. The topic of Pbilology had also appeared to him a suitable one, with his means of original inquiry, and study of the various dialects of the Algonquin, for a separate treatise.
3. Very few persons have been much abroad in the Indian territories, without observing evidences of the skill of the native tribes in picture-writing-a subject, which, on inquiry, revealed an ar of mnemonics, chiefly cultinted by the Indian metais and prophets, while it opened a curious avenue to their religious views and opinions.
4. To these topics thus suggested from his materials, the writer has added, $\sim$ or rether, it was one of the earliest themes which arrested his attention, their curious oral fictitious legends, tales and fables, which are told for the amusement of the ledge circle, and thus banded down by tradition, from generation to generation. A part only of his observations in each of these departments has been published.*

Abstracting the consideration of these four Lopics, from his MS. materials, 1here still remained a large amount of miscellaneous matter, which he deemed it best to preserve, and yet felt but lit'le disposition to re-compose and classify. It is to this residuary portion of his materials, that he refers as the origin of the publication of Oneota. The papers inserted in this work often bring out traits of the peopie, with a freshness which they could hardly retain in more elaborate essaya. Above all, they are deemed to abound in "characteristict" of the Rare, and this secondary title has, therefore, been adopted. The amount of this species of miscellaneous matter, in bis hands, is still unexhausted. How far the volume, now put forth, may be approved, it is for the public to judge.

HENRY R. SCHOOLCRAFT.

## TALES OF A WIGWAN.

## TALE FIRST.

## THE WHITE STONE CANOE.

Theere was once a very beautiful young girl, who died saddenly on the day she was to have been married to a handeome young man. He was also brave, but his heart was not proof against this loses. From the hoor she was buried, there was no more joy or peace for him. He went ofien to visit the spot where the women had buried her, end sat musing there, when, it was thought, by some of his frienda, he would have done betier to try to amuse bimself in the chase, or by divering his thoughts in the war-path. But war and bunting had both lost their charns for him. His heart was already dend within bim. He pushed saide both bis war-club and his bow and arrows.

He had benrd the old people say, that there was a path, that led to the land of souls, and he determined to follow it. He accordingly set out, one morning, after having completed his preparations for the journey. At first he hardly koew which way to go. He was only guided by the tradition that he must go south. For a while, he could see no change in the face of the country. Foreste, and hills, and vallies, and streams had the same looks, which they wore in his native place. There was boow on the ground, when he eet oub, and it was sometimes seen to be piled and matted on the thick trees and bushes. At length, it began to diminish, and finally disappeared. The forest assumed a more cheerful appearance, the leaves put forth their buds, and before he wat awate of the completeness of the change, he found himself surrounded by spring. He had left bebind him the land of snow and ice. The air became mild, the dark clouds of winter bad rolled away from the sky; a pure fied of hlue was above him, and as be went he saw flowers beside hia path, and beard the songs of birds. By these signs be knew that he wat going the right way, for they agreed with the traditions of his tribe At length he spied a parb. It led him through a grove, then up a long and elevated ridge, on the yery top of which he came to a lodge. At the door stood an old man, with white hair, whose eyes, though deeply sunk, had a fiery brilliancy. He had a long robe of skins thrown looedy around his shouldert, and a staff in his hands.

The young Cbippewayan began to tell his story; but the venerable chiaf arrested him, before he had proceeded to speak ten words. I have expected you, he replied, and had just risen to bid you welcome to my abode. Sbe, whom you seek, passed herc but a few days since, and being fatigued with her journcy, rested herself here. Enter my lodge and be seatod, and I will then eatisfy your enquiries, and give you directions for your journey from this point Having done this, they both issued forth to the lodge door. "You see yonder gulf, eaid he, and the wide stretching blue plains beyond. It is the land of souls. You stand upon its borders, and my lodge is the gate of entrance. But you cannot take your body along. Leave it here with your bow and arrows, your bundle and your dog. You will fiod them safe on your return." So saying, he re-entered the lodge, and the freed traveller bounded forward, as if his feet had suddenly been endowed with the power of wings. But all things retained their natnral colours and shapes. The woods and leaves, and streams and lakes, were only more bright and comely than he had ever witnessed. Animals bounded ecross bis path, with a freedom and a confidence which seomed to tell him, there was no blood shed here. Birds of benutiful plumage inhabied the groves, and sported in the waters. There was but one thing, in which he saw a very unusual effect. He noticed that his passege was not atopped by trees or oher objects. He appeared to walk diroctly throogh them. They were, in fuct, but the soule or abadows of material trees. He became sensible that he war in a land of shadows. When he had travelled half a day's journey, through a country which was contipually becoming more attractive, he came to the banke of a broad lake, in the centre of which was a harge and beautiful island. He found a canoe of shining whise sone, tied to the shore. He was now sure that he had come the right path, for the aged man had told bim of this. There were also shining paddles. He immediately entered the cance, and took the paddles in his hands, when whis joy and surprise, on turning round, he beheld the object of his search in another canoe, exactly its counterpart in cyery thing. She had exactly imitated his motions, and they were side by side. They at once pushed out from shore and began to croso the lakic. lts waves seemed to be rising and at a distance looked ready to awallow them up; but just as they entered the whitened edgo of thern they seemed to melt away, as if they were but the images of waves. But no sooner whe one wreath of foam passed, than another, more threatening still, rose up. Thus they were in perpetual fear; and what added to it, was the clearness of the water, through which they could see henpe of beings who had perished before, and whose boncs laid strewed on the bottom of the lake. The Master of Life had, however, decreed to let them pass, for the actions of neither of them had been bad. But they saw many othera struggling and sinking in the waves. Old meu and young men, males and feraales of all ages and ranks, were there; some passed, and
some sank. It was only the little children whose canoes seemed to meet no waves. At length, every difficulty was gone, as in a moment, and they both leapt out on the happy island. They felt that the very air was food. It strengthened and nourished them. They waadered together over the blissful fields, where every thing was formed to please the eye and the ear. There were no tempests-there was no ice, no chilly winds-no one shivered for the want of warm clothes: no one suffered for hunger-no one mourned for the dead. They saw no graves. They heard of no wars. There was no hunting of animals; for the air itself was their food. Gladly would the young warrior have remained there forever, but he was obliged to go back for his body. He did not see the Master of Life, but he heard his voice in a soft breeze: "Go back, said this voice, to the land from whence you came. Your time has not yet come. The duties for which I made you, and which you are to perform, are not yet finished. Return to your people, and accomplish the duties of a good man. You will be the ruler of your tribe for many days. The rules you must observe, will be told you by my messenger, who keeps the gate. When he surrenders back your body, he will tell you what to do. Listen to him, and you shall afterwards rejoin the spirit, which you must now leave behind. She is accepted and will be ever here, as young and as happy as she was when I first called her from the land of snows." When this voice ceased, the narrator awoke. It was the fancy work of a dream, and he was still in the bitter land of snows, and hunger and tears.

## THE

## LYNX AND THE HARE.

## A FABLE FROM THE OJIBWA-ALGONQUIN.

A lynx almost famished, met a hare one day in the woods, in the wint season, but the hare was separated from its enemy by a rock, upon which it stood. The lynx began to speak to it in a very kind manner. "Wabose! Wabose!" " said he, "come here my little white one, I wish to talk to you." "O no," said the hare, "I am afraid of you, and my mother told me never to go and talk with strangers." "You are very pretty," replied the lynx, "and a very obedient child to your parents; but you must know that I am a relative of yours; I wish to send some word to your lodge ; come down and see me." The hare was pleased to be called pretty, and when she heard that it was a relative, she jumped down from the place where she stood, and immediately the lynx pounced upon her and tore her to pieces.

[^1]
## TALE SECOND.

## THE WORSHIP OF THE SUN.

AN OTYOWA TRADIIION,

A long time aga, there lived an aged Odjibwa and his wife, on the shoree of Lake Huron. They had an only son, a very beautiful boy, whose name was O-na-wut-a-qut-0, or he that catches the clouds. The family were of the totem of the beaver. The parents were very proad of him, and thought to make him a celebrated man, but when he reached the proper age, he would not submit to the We-koonde-win, or fast When this time arrived, they gave him charcoal, inetead of his brealfass, but he would not blacken bis face. If they denied him food, he would seek for birds' eggs, along the shore, or pick up the heads of fish that had been cast away, and broil them. One day, they took away violently the food he bad thus prepared, and cast him some coals in place of it. This ect brought him to a decision. He took the coals and blackened his face, and went out of the lodge He did not return, but slept without; and during the night, he had a dream. He dreamed that he anw a very beautiful female come down from the clouds and stand by his side. "O-no-wut-a-qut-0," said she, "I am come for you-step in my tracks." The young man did so, and presently felt bimself ascending above the tops of the trees-he mounted up, step by step, into the air, and through the clouds. His guide, at length, passed through an orifice, and he, following her, found bimself standing on a beautiful plain.

A path led to a splendid lodge. He followed ber into it. It was large, and dividod into two parts. On one end he san bowe and arrows, clubs and spears, and various warlike implements tipped with silver. On the nther end, were things exclusively belonging to females. This was the home of his fair guide, and he saw that she had, on the frame, a broad rich bett, of many colours, which sho was weaving. She said to him: "My brother is coming and I must bide you." Puting him in one corner, she spread the belt over him. Presently the brother came in, very richly dressed, and shining as if he had had points of silver all over him. He took down from the wall a splendid pipe, together with his sack of a-pa-ko-ze-gun, or smoking mixture. When he had finished regaling himself in this way, and laid his pipe aside, he raid to his sister: "Nemists," (which is, my elder sister,) "when will you quit these practices? Do you forget that the Greatest of the Spiritu has commanded that you should not
take away the children from below? Perhaps you suppose that you have concealed O -na-wut a-qut-o, but do I not know of his coming? If you would not offend me, send him back immediately." But this address did not alter her purpose. She would not send him back. Finding that she was purposed in her mind, he then spoke to the young lad, and called him from his hiding place. "Come out of your concealment," said he, "and walk about and amuse yourself. You will grow hungry if you remain there." He then presented him a bow and arrows, and a pipe of red stone, richly ornamented. This was taken as the word of consent to his marriage; so the two were considered husband and wife from that time

O-no-wut-a-qut-o found every thing exceedingly fair and beautiful around him, but he found no inhabitants except her brother. There were flowers on the plains,- There were bright and sparkling streams. There were green vallies and pleasant trees. There were gay birds and beautiful animals, but they were not such as he had been accustomed to see. There was also day and night, as on the earth; but he observed that every morning the brother regularly left the lodge, and remained absent all day; and every evening the sister departed, though it was commonly but for a part of the night.

His curiosity was aroused to solve this mystery. He obtained the brother's consent to accompany him in one of his daily journies. They travelled over a smooth plain, without boundaries, until O -no-wut-a-qut-0 felt the gnawings of appetite, and asked his companion if there were no game. "Patience! my brother," said he, "we shall soon reach the spot where I eat my dinner, and you will then see how I am provided." After walking on a long time, they came to a place which was spread over with fine mats, where they sat down to refresh themselves. There was, at this place, a hole through the sky ; and O-no-wut-a-qut-o, looked down, at the bidding of his companion, upon the earth. He saw below the great lakes, and the villages of the Indians. In one place, he saw a war party stealing on the camp of their cuemies. In anuther, he saw feasting and dancing. On a green plain, young men were engaged at ball. Along a stream, women were employed in gathering the a-puk-wa for mats.
"Do you see," said the brother, "that group of children playing beside a lodge. Observe that beautiful and active boy," said he, at the same time darting something at him, from his hand. The child immediately fell, and was carried into the lodge.

- They looked again, and saw the people gathering about the lodge. They heard the she-she-gwan of the meeta, and the song he sung, asking that the child's life might be spared. To this request, the companion of O-no-wut-qut-o made answer-"send me up the sacrifice of a white dog." Immediately a feast was ordered by the parents of the child, the white dog was killed, his carcass was roasted, and all the wise men and medicine men of the village assembled to witness the ceremony. "There are many
below," continued the voice of the broher, "whom you call great in medical shill, but it is because their ears are open, and they listen to my poice, that they are able to succeed. When I have struck one with sickmess, they direet the people to look to me: and when they send me the offering I ast, I remove my hand from off thern, and they are well." After he had said this, they saw the sacrifice parcelled out in diahes, for those who were at the feast. The master of the feast then said, "we seand this to thee, Great Manito," and immediately the roasted animal came up. Thus their dinner was supplied, and after they had eaten, they returnad to the lodge by another way.

Ater this manner they lived for some time; but the place becams wearisome at last O-no-mutequt-o thought of his friends, and wished to go back to them. He had not forgotten his native village, and hia father's lodge; and he asked leave of his wife, to return. At length she consented. "Since you are better pleased," she replied, with the cares and the ills, and the poverty of the world, than with the peaceful delights of the sky, and its boundless prairies, go! I give you permisaion, and since I have brought you bither, I will conduct you back; hut remember, you are still my huaband, I hold a chain in my hand hy which Icandraw you beck, whenever I will. My power over you is not, in any manner, diminished. Beware, therefore, how you venture to take a wifo emong the people below. Should you ever do so, it is then that you shall feel the force of my displeasure"

As she said this, her eyes spartled-ohe raised herself slighly on her toes, and stretched herself $u_{p}$, with a majeatic air; and at that moment, $\mathbf{O}$ -mo-wut-a-qut o awoke from his dream. He found himself on the ground, near his fahher's lodge, at the very spot where he had laid himself down to fast. Instead of the bright beings of a higher world, be found himealf surrounded hy his parents and relatives. His mother told him be had been absent a year. The change was so great, that he remained for come time moody and abstracted, but by degrees, he recovered his spirita He began to doube the reality of all he had heard and seen above. At lars, he forgot the admonitions of his spouse, and married a beautiful young woran of his own tribe But within four days, she wns a corpae. Even the fearful admonition was lost, and be repeated the offence by a meond marriage. Soon afterwarde, he went out of the lodge, one night, hut never relurned. It was believed that his wife had recalled him to the region of the clouds, where the tradition asserts, he still dwells, and walks en the daily rounds, which he once winessed.

The native tribes are a people without maxims : One of the few which have been noticed is this: Do not tell a story in the summer; if you do, the toads will visit you.

## TALE THIRD.

## SHINGEBISS.. .

## FROM THE ODSIBWA-ALOONQUIN,

There was once a Shingebiss, [the name of a kind of duck] living alone, in a solitary lodge, on the shores of the deep bay of a lake, in the coldest winter weather. The ice had formed on the water, and he had but four loge of wood to keep his fire. Each of these, would, however, burn a month, and as there were but four cold winter months, they were sufficient Locarry him through till spring.

Shingebiss was hatdy and fearless, and cared for no one. He would go oul during the coldest day, and seek for placea where flaga and rushes grew through the ice, and plucking them op with his bill, would dive throagh the openings, in quest of fish. In this way he found plenty of food, while ohers were starving, and he went home daily to his lodge, dragging strings of fish afler hirn, on the ice.

Kabebonicea * obeerved him, and felt a litte piqued at his perseverance and good luck in defiance of the severest blasts of wind he could send from the northest "Why $!$ this is a wonderful man," said he; " he does not mind the cold, and appears as happy and contented, as if it were the month of June. I will try, whether he cannot be mastered." He poured fortb ten-fold colder blasts, and drifis of snow, so that it was next to impoevible wo live in the open air. Still the fire of Shingebiss did not go out : be wore bat a single strip of leatber around his body, and he was seen, in the worst weather, kearching the shores for rushes, and carrying home fish.
"I shall go and fisit him," said Kabebonicea, one day, as he saw Shingebiss dragging along a quanuty of fish. And accordingly, that very night, ho went to the door of his lodge. Meantime Shingebiss had cooked his fish, and finished his meal, and was lying, partly on his side, before the fire singing his songs. Afler Kabebonicca had come to the door, and mood listening there, he sang as follows:

| Ka | Neej | Ka | Neej |
| :---: | :---: | :---: | :---: |
| Be | In | Be | In |
| Bon | In | Bon | In |
| Oc | Ee. | Oc | Ee. |
| Ca | We.ya ! | Ca | We-ya! |

The nomber of words, in this song, are few and simple, but they are made ap from compounds which carry the whole of their original meeningst, and are rather suggestive of the ideas floating in the mind, than actual expresaions of those ideas. Literally he singa :

Spiris of the North West-you are but my fellow man

[^2]By being broken into syliables, to correspond with a simple chant, and by the power of intonation and repetition, with a chorus, these words are expanded into melodious utterance, if wo may be allowed the term, and may be thus rendered :

> Windy god, I know your plan, You are but my fellow man, Blow you may your coldest breeze, Shingebiss you cannot freese, Sweep the srongest wind you can, Sbingebiss is still your man, Heigh for life-and ho : for blies, Who so free as Shingebiss?

The bunter knew that Kabebonicca was at his door, for he felt his cold and strong breath ; bat he kept on singing his congs, and affected utter indifference At length Kabebonicca entered, and took his seat on the oppasite side of the lodge. But Shingebiss did not regard, or notice him. He got up, as if nobody were present, and tuking his poker, pushed the log, which made his fire burn brigbter, repeating as he sat down again :

You are but my fellow man.
Very soon the tears began to flow down Kabebonicca's cheeks, which incrensed so fast, that, presently, he said to himself, "I capnot stand thisI must go out" He did so, and left Shingeijiss to his songs ; but resolved to freeze up all the flag orifices, aud make the ice thick, so that he could not get any more fish. Still Shingebiss, by dint of great diligence, found means to pull up new rools, and dive under for fish. At last Kabebonicca was compelled to give up the contest. "He must be aided by some Monedo," said he, "I can neither freeze him, nor starve him, he is a very singular being-I will let him alone."

The introduction of the Saxon race into North America, has had three determined opponents, the life of each of whom forms a distinct era. They were Powhatan, Metskom, and Pontiac. Each pursued the same method to accomplish his end, and each was the indominitable foe of the raceSassacus ought, perhaps, to be added to the number. Brant, was hut a partisan, and fought for one branch, against another. Tecumseh, wats also, rather the foe of the American type of the race, than the whole race. The same can be said of lesser men, such as Little Torle, Buckanjaheela, and Black Hawk. Uncas was also a partisan, not a hater of the white race, and like Waub Ojeeg in the north, fough, that one tribe might prevail over enother. If the Saxon race profited hy tbis, he could not heip it Tuscaloosa fought for his tribe's supremacy; Osceola for revenge.

## NAMES OF THE AMERICAN LAKES.

Ortario, is a word from the $\mathbf{W y a n d} \alpha$, or, as called by the lroquois, Quatoghie lenguage. This tribe, prior to the outbreak of the wer against them, by their kindred the Iroquois, lived on a bay, near Kingston, whicb was the ancient point of embarkation and debarkation, or, in other words, at once the commencement and the terminus of the portage, according to the point of destination for all, who passed into or out of the lake. From such a point it wns natural that a term so euphonous, should prevail among Europeans, over the other Indian names in use. The Mohawks and their confederates, generally, called it Cadaracqui-which was aleo their name for the St. Lawrence. The Onondagas, it is believed, knew it, in early cimes, by the name of Oswego.* Of the meaning of Ontario, we are lef in the dark by commentators on the Indian. Philology casta some light on the subject. The first syllable, on, it may be observed, appears to be the notarial increment or ryllable of Onondio, a hill. Tarak, is clearly, the same phrase, written darac, by the French, in the Mohawk compound of Cadaracqui; and denotes rocks, i. e. rocks standing in the water. In the final vowels io, we have the same tern: wisb the same meaning which they carty in the Seneca, or old Mingo word Ohio $\dagger$ It is descriptive of an extended and beautiful water prospect, or landscapo. It possessea all the proportiea of an exclamanon, in other languages, but according to the onique principles of the Indian grammar, it is an exclamation-substanlive. How beautiful! [the prospect, scene present.]
Erie is the name of a tribe conquered or extinguished by the Iroquois. We cannot rop to inquire into this fact historically, farther than to say, that it was the policy of this people to adopt into their different tribes of the confederacy, the remnants of nations whom they conquered, and that it was not probahte, therefore, that the Erics were annihilated. Nor is in probable that they were a people very remote in kindred and language from the ancient Sinondowans, or Senecas, who, it may be supposed, by crushing them, dearroyed and exterminated their name only, while they srrengthened their numbers by this inter-adoption. In many old maps, this lake bears the name of Erie or "Oskwago."

Huron, is the man de guerre of the French, for the "Yendats," as they are called in some old authors, or the Wyandots. Charlevoix tells as that it is a term derived from the French word hure, [a wild boar,] and was applied w this nation from the mode of wearing their hair. "Quellea Hareal" said the frrs visiters, when they saw them, and hence, according to this reapectable author, the word Huron.

[^3]When this nation, with their confederates, the Algonquins, or Adirondaks, as the Iroquois called them, were overthrown in several decisive battes on the St. Lawrence, between Montrenl and Quebec, and compelied to fly wead; they at first tool shelter in this lake, and thus transferred their same to it. With them, or at least, at the same general era, came some others of the tribes who made a part of the people called by the French, Algonquins, or Nipercinenns, and who thus constituted the several tribes, spaking a closely cognate language, whose descendants are regarded by Lilologists, as the modern Lake-Algonquins.

The French sometines called this lake Mer douce, or the Placid set. The Oljibwas and some other northern tribes of that stock, call it Otowa lake. No term has been found for it in the Iroquois language, unless it be that by which they distinguished its principal seat of trade, negociation and early rendezvous, the island of Michilimackinac, which they called Tiedonderaghie.

Michigan is a derivative from two Odjibwa-Algonquin words, signifying largs, i. e. large in relation to masses in the inorganic kingdom, and a lake. The French called it, generally, during the earlier periods of their transactions, the lake of the Illincse, or Jllinois.

Superior, the most northwesterly, and the largest of the series, is a term which appears to have come into general use, at a comparatively early era, after the planting of tho English colonies. The French bestowed upon it, unsuccessfully, one or two names, the last of which was Traci, after the French minister of this name. By the Odjibwa-Algonquins, who at the period of the French discovery, aod who still occupy its borders, it is called Gitch-Igomee, or The Big Sea-water; from Gitchee, great, and guma, a generic term for bodies of water. The term IGOMA, is an abbreviated form of this, suggested for adoption.

The poetry of the Indians, is the poetry of naked thought. They have neither ryhme, nor metre to adorn it.

Tales and traditions occupy the place of tooks, with the Red Race.They make up a kind of oral literature, which is resorted to, on long winter eveningt, for the amusement of the lodge.
> - The love of independence is so great with these tribes, that they have never been willing to load their political system with the forms of a regaMr government, for fear it might prove oppresive.

To be governed and to be enslaved, are ideas which have been confounded by the Indians.
, 18

## ODJIBWA SONG.

Ters following song, taken from the oral traditions of the north, is corr nected with a historical incident, of note, in the Indian wars of Canada. In 1759, greal exertions were made by the French Indisn department, under Gen. Montealm, to bring a body of Indians into the ralley of the lower St. Lawrence, and invitations, for this purpose reached the utmast shores of Lake Superior. In one of the canoes from that quatter, which vas left on their way dowd, at the lake of Two Mountains, near the mouth of the Utawas, while the warriore proceeded farther, wat a Chippewa girl called Paig-wain-eobhe, or the White Eagle, driven by the wind. While the party awaited there, the result of events at Quebec, sho formed an attachment for a young Algonquin belonging to the French mincion of the Two Mountains. This attachment wais mutual, and gave origin to the song, of which the original words, with a literal prose trans htion, are subjoined:

## L

Ia indenaindum
Ia indenaindum
Ma kow we yah
Nin denaindum we.
Ah mol when I think of him-when I think of him-my aweothetrit Algosquin

## II

Pah bo je aun
Ne be nau be koning
Wabi meguiasun
Nene mooshain we
Odiahquagumee.
As I embarked to retarn, he pat the white wampum around my neck - pledge of tronh, my sweetheart, my Agonquin.

## IIL

Keguh wejewin
Ain dah nak ke jub
Ningee egobun
Nebe mooshain we
Odishquagumee
I shall $8^{\circ}$ with you, he said, to your native conatry-I shall $g^{\circ}$ whth jon, my wreetheart-my Algonquin.

## ODJIBWA SONG.

IV.

Nial nin de nah dush
Wassahwud gushuh
Aindahnuk ke yaun
Ke yau ninemooshai wee
Odishquagumee.
Alas1 I replied-my native country is far, far away-my sweetheart; my Algonquin.

## V.

Kai aubik oween
Ain aube aunin
Ke we naubee
Ne ne mooshai we
Odishquagumee.
When I looked back again-where we parted, he was still lookng after me, my sweetheart ; my Algonquin.

> | VI. |
| :--- |
| Apee nay we ne bow |
| Unishe bun |
| Aungwash agushing |
| Ne ne mooshai we |

Odishquagumee.
He was still standing on a fallen tree-that had fallen into the weter, my sweetheart; my Algonquin.

## VII.

## Nia ! indenaindum <br> Nia ! in denaindum <br> Ma kow we yuh <br> Nin de nain dum we <br> Odishquagumee.

Alas I when I think of him-when I think of him-It is when I think of him ; my Algonquin.

Eloquence on the part of the speakers, is not so much the result of superior force of thought, as of the strong and clear positions of right, in which they have been placed by circumstances. It is the force of truth, by which we are charmed.

An Indian war song, sung in public, by the assembled warriors on the outbreak of hostilities, is a declaration of war.

## SHINGABA-WOSSINS, OR IMAGE STONES.

This native tribes who occupy the borders of the great lakes, are very ingenious in converting to the uses of superstition, such masses of loose rock, or boulder.stones, as have been fretted by the action of water into shapes resembling the trunks of human bodies, or other organic forms.

There appears, at all times, to have been a ready disposition to turn such masses of rude natural sculpture, so to call them, to an idolatrous use ; as well as a most ingenious tact, in aiding the effect of the natural resemblance, by dots or dabs of paint, to denote eyes, and other features, or by rings of red ochre, around their circumference, by way of ornament.
In the following figures, $1,2,3,4,5$, some of these masses are represented.

Number 3. was brought to the office of the Indian Agent at Michilimackinac in 1839, and placed among objects of analagous interest to visiters. It consisted of a portion of a vein or mass of gneiss or granite, from which hoth mica and feldspar were nearly absent, existing only in trace, while the quartzy portion predominated, and had, by its superior hardness, resisted the elemental action. The mode of the formation of such masses is very well known to geologists, resulting, in almost every case, - from the unequal degree of hardness of various parts of a mass, submitted to an equal force of attrition, such as is ordinarily given by the upheaving and rolling force of waves on a lake, or ocean beach. To the natives, who are not prone to reason from cause to effect, such productions appear wonderful. All that is past comprehension, or wonderful, is attributed by them to the supernatural agency of spirits. The hunter or
warrior, who is traveling along the coast, and finds one of these sefsculptured stones, is not sure that it is not a direct interposition of his God, or guardian Manito, in his favour. He is habitually a believer in the most suble forms of mysterious power, which he acknowled gee to be often delegated to the native priessa, or necromancers. He is not staggered by the most extraordinary stretch of fancy, in the theory of the change or transformation of animate into inanimate objects, and vice versa. All things, "in heaven and earth," be believes to be subject to this subtle power of metamorphosis. But, whatever be the precise ope rating cause of the respect he pays to the imitative rolled stones, which be calls Shingaba-wossins, and also by the general phrase of Muz-in-in. a-wun, or images, he is not at liberty to pass them without hazarding something, in his opinion, of his chance of success in life, or the formese of the enterprize in hand.

If the image be small, it is generaliy taken with 'him and secreted in the neighberhood of his lodge. If large and too heavy for this purpose, it is set up on the shore, generally in some obscure nook, where an offering of tobacco, or something else of less value, may be made to ith or rather tarough is, to the spirit.
In 1820 one of these stones (No. 2.) was met by an expedition of the government sent north, that year, for the purpose of interior discovery and observation, at the inner Thunder Bay island, in Lake Huron. It was a massy stone, rounded, with a comparatively broad base and entablature, but not otherwise remarkable. It was set up, under a tree on the island, which was small, with the wide and clear expanse of the lake in phain view. The island was ope of those which were regarded as deser, and was probably but eeldom stopped at. It was, indeed, little more than a few acres of boulders and pebbles, accumulated on a limestone reef, and bearing a few stunted trees and shrubs. The water of the lake must, in high storms, have thrown it spray over this imaged stone. It was, in fine, one of those private places which an Indian might be supposed to have selected for his secret worship.

In No. 3. is figured an object of this kind, which was found in 1832. in the final ascent to the source of the Mississippi, on the right cape, in ascending this stream into lac Traverse-at the distance of about 1000 miles above the falls of St. Anthony. 1 landed at the point to see it, having heard, from my interpreter, that such an object was set up and dedicated to some unknown Manito there. It was a pleasant level point of land shaded with trecs, and bearing luxuriant grase aud wild shrubbery and flowers. In the middle of this natural parterre the stono was placed, and was oscrtopped by this growth, and thus concealed by it. 1 ring of red paint encircled it, at the first narrowed point of its circumference, to give it the resemblance of a buman neck; and there were some rude dabe to denote other fanturea. The Indian is nor precise in the matter of
proportion, either in his drawing, or in his atrempks at statuary. He seizes upon some minute and characterisac trait, which is at once sufficient to donote the species, and he is easily satisfied about the rest Thus a simple crose, with a strpit line from shoulder to shoulder, and a dot, or circle above, to serve for a head, is the symbol of the human frame; and without any adjunct of faet, or hands, it could not have been mistaken for any thing else-certainly for any other object in the animal creation.

## THE TITLE PAGE OF THIS WORK.

The rarious figure composing the borders of our title page are accurate copies from drawinga made ty western Indiana, and are designed to be fully explained in future. Some introductory remarks will be necessary, to acquaint the reader with the objects and usee of the rude pictures of our savages. The aubject will be new to hinn, as it has never been correctly and fully made known to the world. It is interesting, as it is made bigbly useful, and frequenly resorted to for a variety of purpases.

The drawiaga may appear too simple and rude $w$ merit allencion; but, like the few forms of our own alphabet, the ideas they are employed to represent render them objects well worthy of regard and of saudy. They will be found wo be connected wihh the habits and character, the superstitiong, history and language of the peculiar race of men to whom they belong; and, if we mistake not, will afford some illustations or hints reloting to the monuments and records of other and distont nations.

The ways in which they are applied are various. They are sometimes mere guide-posts, somotimes epitaphs, histories or mnemonics, often connected with figurative meanings, and sometimes have a mysterious significancy which cannot be unravelled without an acquaintance with some of the profoundest of Indian superstitions, which are reluctandy communicated to a white man. This subject will have a very prominent place in our pages ; and we wish to acquaint the reader with a very interesting reanlt towards which we shall begin, in this number, to conduct him, viz: the interpretation of the inscription or drawing on the celebrated Dighton Rock The learned men of Sweden have recently displayed great zeal and induatry, in their atcmpts to explain it as a work of their Norhmen, the discoverers of the coast of New England about A. D. 1000 : but our readers, we believe, will soon be able to prove for thenselves that it is a genuine specimen of Irdian picture writing, and to comprehend the principles on which it has been interpreted ty some aged Weatern Indians, at the request of Mr. Schoolcraft, His remarks on Picture writing, inserted in the present number of this magazine, are intended as an introduction to that errensive and interesting deparrment of inquiry on which we are ontering. - E:

## PAWNEE BARBARITY.

That the tribes west of the Missouti, and beyond the pale of the ordinary influence of civilization, should retain some shocking customs, which, if ever prevalent among the more favoured tribes east of the Missiasippi and the alleghenies, have long disappeared, may be readily conceived. Wild, erratic bands, who rove over immente plains on horseback, with bow and lnnce, who plunge their knives and arrows daily into the carcasser of the buffalo, the elk and the deer, and who are accustomed to sights of blood and camage, cannot eacape the mental influence of these sanguinary habiss, and must be, more of less, blunted in their conceptions and feelings. Where hrute life is so recklessly taken, there cannot be the same nice feeling and sense of justice, which eome of the more favoured tribes possess, with respect to caking away human life. Yet, it could hardly have been anticipated, that such deeds as we are now called upon to notica, would have their place even in the outskirts of the farther "Far West," and among a people so sunk and degraded in their moral propensitics, as the Pawnees. But the facts are well attested.

In the fierce predatory war carried on between the Pawnees and Siour, acts of blood and retaliation, exercised on their prisoners, are of frequent occurrence. In the month of Febuary, 1838, the Pawnees captured a Siour girl only fourten years of age. They carried her to their camp on the west of the Missouri, and deliberated what ahould be done with ber. It is not customary to put female captives to death, but to make slaves of them She, however, was doomed to a harder fate, but it was carefully concealed from her, for the space of some sixty or seventy days. During all this time she was treated well, and had comfortable lodgings and food, the same as the rest enjoyed. On the 22nd of April, the chiefs held a general council, and when it broke up, it was announced that her doom was fixed, but this was still carefully concealed from her. This doom was an exraordinary one, and so far as the object can be deduced, from the circumbstances and ceremonies, the national hatred to their enemies was indulged, by making the innocent non-combatant, a sacrifice to the spirit of corn, or perhaps, of vegetable fecundity.

When the deliberations of the council were terminated, on tbat dny, she was brought out, nttended by the whole council, and accompanied on a visit from lodge to lodge, until she had gone round the whole circle. When this round was finished, they placed in her hands a small billet of wood and some paints. The wartiors and chicfs then seated themselves in a circle. To the first persen of dietinction she then handed this billet of wood and paint; he contributed to this offering, or sort of sacrificial
charity some wood and point, then handed it wo the natt, who did likewisa, and he passed it to the next, until it had gone the entire rounds, and each one hed contribated some wood and some paint She was then conducted to the place of execurion. For this purpose they had chosen an open grasay glade, near a cornfield, where there wete a few trees The spot selected was between two of these rrees, standing about five feet apart in the centre of which a small fire was kindled, with the wood thus ceremoniously contribuled. Three bars had been tied acroes, from tree to trea, above this fire, at auch a graded height, that the points of the blaza, when at ite maximum, might just reach oo her feet Upon this scafold abe was compelled to mount, when a warrior at each side of her held fire under her arm pies. When this had been continued as long as they supposed she could endare the torture, without extinguishing life, at a given signal, a band of armed bow-men lat fy their darts, and har body, at slmost the same instant, was pierced with a thousand arrowe These were immediately withdrawn, and her flesh then cut with knives, from har thighs, ams and body, in pieces not longer than half a dollar, and put into little baskens. All this was done before life was quite axtinct.

The field of newly planted corn reached near to this opor. This corm had been dropped in the hill, but not covered with earth. The pribeipal chief then took of the flest, and going to a hill of corn, aqueezed a drop of blood apon the grains. This was done by each one, antil all the grains put into the ground, had received this eatraordinary kiod of sprintling.

Thin horrible crnelty took place in the vicinity of Council Blofs Offers to redeem the life of the prisoner had been made by the radere, in a full coancil of eighty chiefa and warriore, hut they were rejected. The original narrator was an eye witmeas. He concludes his description by adding, that hin wife's brother, a Pawnee, had been taken prisoner by the Sious, in the month of June following, and treated in the same manner. Truly, it may be said that the precioctas of the wild roving Bed man, ara "fall of the abodes of cruelty."

Hunling and war are aris which reqnire to be taught The Indian youth, if they were not fumished with bows and arrows, would never learn to till. The same time spent to teach them war and hunting, if . devoted to teach them letters, would make them readers and writera. Education is all of a piece

Enmple is more persuasive than precept in teeching an Indian. Toll him that he shoold never toueh akoohol, and he may not ese clearly why; but show him, hy your invariable practice, that you norer do, and be may be led to confide in your admonitions.

## PERSONAL REMINTSCENCES

## RELATIVE TO

## THE OFFICLAL CONNECTION OF THE WRLTER WITH THE ABORIGINAL RACE

Ir is now twenty six years since 1 first entered the area of the Mississippi valley, with the view of exploring its then bot imperfectly known features, geographical and geological. . Twentytwo years of this period have elapsed since I entered on the duties of an Executive Agert for the United States Government in ins higher northern latitudes among the lndian tribes in the west. Having devoted so large a portion of my life in an active sphere, in which the intervals of travel left me favourable opportunitiea of pursuing the languages and history of this branch of the race, it appears to be a just expectation, that, in sitting down to give some account of this people, there should be some preliminary remarks, to apprise the reader how and why it is, that his atteation is recalled to a topic which he may have supposed to be well nigh exhausted. This it is proposed to do by some brief personnl reminitcences, beginning at the time tbove alluded to.

The year 1814 constituted a crisis, not only in our political hiotory, but also in our commercial, manufacturing, and industrial interests. The treaty of Ghent, which put a period to the war with England, was a blessing to many individuals and classes in Ameriea: but, in its consequences, it had no small share of the effects of a curse upon that class of citizens who were engaged in certain branches of manufactures. It was a peculiarity of the crisis, that these peraons had been stimnlated by double motives, to inveat their capital and tkill in the perfecting and establishment of the manufactories referred to, by the actual wants of the country and the high prices of the foreigu articles. No pains and no cost had been spared, hy many of them, to supply this demand; and it was mother result of the times, that no sooner had they got well established, and were in the higb road of prosperity than the peace came and plunged them headlong from the pinnacle of success. This hlow fell heavier upon some branches than others. It was moes fatal to those manufacturers Who bad undertaken to produce labrics of the bigbest order, or wbich belong to an advanced ctate of the manufacturing prosperity of a nation. Be this as it may, however, it fell withcrushingforce upon that brameb in which I was engaged. As so0n as the American ports wero opened to these fabrics, the foreign makers who could undersoll us, poured in cargo on cargo; and when the first demands bad been met, these eargoes were ordered to be sold at auccion; the prices immediately fell to the lowest point, and the men who had staked in one enterprise their zeal, skill and money, trere ruined at a blow.

Every man in sucb a crisis, must medtally reeoil upon himedf. Habib
of application, reading, and an early desire to be useful, had suctained me at a prior period of life, through the dangere and fascinations of jovial company. There was in this habit or tempar of roomeeclution, a pleasing resource of a conservative character, which had filied up the intarvalo of my husiest hours ; and when business imelf came to a stand, it had the effect to aid me in balancing and poising my mind, while I propared to enter a wider field, and indeed, to change try whole plan of lifa. If it did not foster a spirit of right thought and self-dependence, is at least, gave a degree of tranquility to the intervals of a marked pause, and, perhapes, flattered the ability to act.

Luckily I was still young, and with good animal apirisa, and a sonnd conscitation I resolved I would not go down so. The result of seven years of strenuous exertions, applied with persevering diligence and succeas, was cast to the winde, but it was seven years of a young man's life, and I thooght it could be repaired by time and industry. What the east witheid, I hoped might be supplied by another quartar. I turned my thonghts to the west, and diligently read all I could find on the subject The resull of the wor of 1812 , (if this contest had hrought no goldea thowera on American manufacturers, as I conld honestly teasify in my own case, had opened to emigration and enterprise the great area west of the Alleghanies. The armies sent out to battle with Iodian, and other foes, on the banks of the Wabash, the IWinois, the Detroi, the Haisin and the Miami of the Lakes, had opened to obearvation attractive senes for settlement; and the aword was no sooner cast aside, than anigrants seized hold of the axe and the plough. Tbis reault was worth the con of the whole contest, honour and glory included. The wotal proetration of the moneyed syseem of the country, the effects of city-iot and other land speculations, while the system was at its full flow, and the very heckward seasons of 1816 and 1817, attended with late and eariy frosth, which extensively deatroyed the corn crop in the Allantic ctates, all leas their aid in turning attention cowards the west and south-west, where seven new states have been peopled and organized, within the brief period to which theae reminiscences apply: namely, Indiana, Illinois, Misasisaippi, Miesouri, Alabama, Arkanses and Michigan, beeides the flourishing terriories of Wisconsin and Iowa, and the more slowly advancing territory of Florida. It appeared to me, that information, geographical and other, of such a wide and varied region, whose boundaries were but ill defined, must be inceresting at such a period; and I was nor without the hope that the means of my future advancement would be found in connexion with the share I might take in the exploration of it Wirh such viewa I resolved to go west. This feeling I find to be expressed on the back of an ald alip of an account of the period:

[^4]
## Till some sunny spot invite me,

Till some guardian bid me bide.
" Snow or tempest-plain the dreareat
Shall oppose a feeble bar, Since I go from friends the dearest,
'Tis no mater then how far.
"On !-'tis useless here to dally ;
Onl-I can but make or mar;
Since my fortune leads tosally,
'Tis no matter then how far.'
Or the "seven years' to which ailasion has been made I had spent forr in New England a land, which is endeared to me at this distance of time, by recollections of hoepitatity, virtue, and manly intelligence.

While engaged in the direction of the businese above named, 1 had propared the notes and materials for my first publication, in which I aimed to demonstrate the importance of an acquaintence with Chemistry and Mineralogy in the preparation and fusion of numerons subetances in the mineral kingdon, which reault in the different conditions of the various glassea, enamels, sce. I had, from early youth, cultivated a taste for mineralogy, long indeed it may be said, before I knew that mineralogy wae a ecience ; and, as opportunitiee increased, had been led by my in quiries, (which I followed with ardour but with very slight helpe,) to add to this some knowledge of elementary chemierry and experimental philoophy, and to supply mysolf, from Boston and New York, with books, apparatus, and tesis. I do not know that there were any publie lecturet on mineralogy, \&c. at this time, say from 1810 to ' 16 ; certainly, there were none within my reach. I gleaned from the best sources I could, and believe that the late Professor Frederick Hall was the only person to whom I was indebted even for occasional instractions in these depart ments. He was a man errongly devoted to some of the natural sciences, particulaly mineralogy ; and was erudite in the old authors on the sabjech, whom he liked to quote ; and I may bay that I continued to enjoy his confidence and friendship to the time of his death, which happened in 1843. From such sources, from the diligent reading of books, and from experiments, conducted with the adrantage of having under my charge extensive works, at wurious times, in the states of New York, Vermont and New Hampehire, I drew the principlea which formed the basis of my treacise on Vitreology. With this work in hand, I left Keene, in New Hempshite, early in the winter of 1817; and, crossing the Connecticot river at Bratheboro', proceeded over the Green Mountains, by the route of Beanington, to Albany, and thence returned to my father's honse in westerd New York. No time was lost in issoing proposals for the work ; and I bad the antisfaction to find that the portions pablished, and
the entire plan and merits of it were warmly approved by the pen of the late Mr. Maynard of Utiea, and by several liberal minded and intelligent persons. Before quituing New England, I had determined to go wo tho Mississippi ralley, and had begun to study its geography $;$ and I now resolved to proceed, without unnecessary delay.

Means constitute the first object of solicitude in all such undertakingat The ebbing tide of manufacturing prosperity to which I have referred, had left me very poar. From the fragments of former acquisitions, for which, however, I was exclusively indebted to my own industry, I raised a amall zom of money--much smaller I think than moet men would be willing to start with, who had resolved to go so far. I had, in troth, but sisty dallan in the world; hut I posesesed a very good wardrobe, and some cther personal means, such as it may be rupposed will adhere to a man who has lived in abuadance for many yeara I put up.a minintare cat lection of mineralogical specinens, to serve as a standard of comparivo in the wext, a few implemente for analyzi, soome books which I thought it would be difficult to meet wib in that region, and some drawing materials. I had conneted these things in some way with my future success. In other respects, I had the means, as above hinted, of making a reapectable appearance. Thue prepared, I bade edieu to my father and motber, and also to three sisters and a brober, all younger than myself, and sea forward. The winter of 1818 had opened before I reached my brober': house at Geneva, in western New York. From this point I determined to leave the main track, through the Genessee connty west, and to strike the bead waters of the Alleghany river, so as wo descend that stream with the spring flood.
My brother drove me in bis own sleigh, as far as Angelica. By the tame we reached that place, being no traveller and much fatigued with the intricacies and roaghness of the road, he was fain to give over his undertaking, and I parted from bim, sending back the sleigb from Olean, to take him home.

The Alleghany river was locked with ice when I reached it I had an opportunity to cross it on foot, and to examine in the vicinity those evidences of the coal formation which are found in masses of bitaminous shale, slaty coal and petroleum. The river began $n$ open about tha middla of March. I left Olean in the first ark for the season, borne oanwards down the sweeping Alleghany at the rop of the flood, often through winding channels, and once in danger of being precipitated over a mill dam, by taking the wrong channel.

On another occasion, just as we were coming to the divinion of the channel, at the head of a group of islands, a tall Seneca Indian, wandint in the bow of a very long pine canoe, cried out, in a tone of peculiny emar phasis, "Keep to the right-I apeak it." This direction we followed, and were mad from another mishap. We tied the ark to the ahore as mighe,
built a fire on the bank and cooked a supper. On passing the Conowonga, it was at the height of its flood, and appeared to bring in as much water an the Alleghany. We stopped at the noted chief Cornplanter's village, and also to gratify a reminiscent curiosiry, at the mouth of French Creek, connected with Washington's perilous adventure in visiting Fort de Boef, now Erie. At Kittaning, a great scow ferry boat was rowed and managed by two women or girls with a degree of muscular exertion, or rather ease, which would put to the blush many a man east or wess of the Alleghanies. The tone, air, and masculine srength of these girl-boamen, reminded me of nothing this side of Rollin's description of the Amazons -ase that the same provision was not apparent for drawing the bow. Bold hills line both banka of the river along its upper parta, and coninue, indeed, at farther intervals apart, to very near the junction of the Monongahela; but long before this point the atream is one of noble dimensions, clear, hroad, and strong. After a voyage of exciting and rivid interest, I reached and landed at Pitteburgh
(To be cortinued.)

## THE INDIAN LANGUAGES.

Mort persons are not acquainted with the nature of the languages of our Indians. Many of them are so entirely different hat no words have been found alike in them. At the same time, they are all formed on a plan so different from ours, and indeed from other common languagea, that our rales of grammar give us very litle essistance in investigating them.

But there are some very important particulars in which they are all alike, that is, they have a few simple roots, and certain short sounds to express time, number and other circumstances, and these are put together in a manner generally similar throughout North and South America. This renders many of the words very long: hut every syllable is expressive.

To analyze Indian words, therefore, is a very interesting exercise; and as we are invited to it hy the names of many places and objects connected with our mational history, and with the endearing associations of childhood, it is to be presumed that some of our readers will require nothing but the opportunity to direct some attention to the subject

Many books exist which attempt to trace some of the Indian languagea to those of other nations, but most of them were written by persons unacquainted with their construction, and grided only by the sounds of a few words, written by other incorectly, or in an uncertain manner. Good grammery of some of the languages exist; and the American Bible society has published parts of the acriptures in eaveral Indian tonguee. The reader is referred for more particular information to Mr. Daponceau's and Mr. Gallatin's works on this subject, as well as to some of Mr. Schoolerafts former poblications.- $\boldsymbol{E}$.

## ARTOFPICTURE WRITING,

AND THㅛ HTETIM OF

## LNREONIC STIBOLS OP THE NORTH AMERICAN DNDLANS.

## CHAPTERI.

 DNG: TEE EDT FUREUED.

Teze practice of the North American tribes, of drawing figures and pictures on skins, trees, and various other substances, has been noticed by travellers and writers from the earliegt times Among the more northwrly tribes, these figures are often observed on that common subetitute for the ancient papyrus, among the nations, the barl of the betula papyracea, or white birch: a substance possessing a smooth surface, easily impressed, rery flerible, and capable of being preserved in rolls. Often these devices are cut, or drawn in colours on the trunks of trees, more rarely on rocke or boulders. According to Colden and Lafitou records of this rude character were formerly to beseen on the blazed surface of trees, along some of the ancient paths and portages leading from the aonrces of the Aunntic rivers into the interior, or in the valley of the St Lawrence; but these, after satisfying a transient curiosity, have long since yielded to the general fate of these aimple and unenduring monuments. Pictures and symbols of this kind are now to be foand only on the unreclaimed borders of the great area west of the Alleghanies and the Lakes, in the wide prairies of the west, or along the Missouri and the upper Misaisippi. It in known that such devices were in use, to some extent, at the era of the discorery, smong moss of the tribes, situated between the latitudes of the capes of Florida, and Hudson's Bay, although they bave been conaidered as more particularly characteristic of the tribes of the Algonquin type. In a fow instances, thees pictorial inscriptions have been found to be painted or stained on the faces of rocks, or on loose botalders, and still more raraly, devicen were scratehed or pecked into the aurface, at is found to be the case still at Dighton and Vemanga. Thoee who are in"unt
on obeervations of this kind, will find figures and rude hiaroglyphics anvariably at the present time, on the grave poots which mark the places of Iudian sepulchre at the west and north The nations who rove over the westera prairies, inscribe thern on the skins of the buffalo. North of latitude $42^{\circ}$, the bark of the birch, which furnisbes at onee the material of canoés, tents, boxes, water-dippers, and paper, constitutea the common medium of their exhibition. Tablets of hard wood are confined to such devices as are employed by their priesus and prophets, and medicinemen; and these charactert unifonnly assume a more mystical or sacred import But the recent discovery, on one of the tributaries of the Busquehanna, of an Indien map, drawn on ctone, with intermixed devices, a copy of which appens in the lst volume of the collections of the Historical Committee of the American Philosophical Society, proves that etone was also employed in that branch of inscripcion. This discovery was as the area occupied by the Lenapees.

Colden, in his history of the Five Nations, informs us that when, in 1696, the Count de Frontenac marched a well appointed army into the Iroquois conntry, with artillery and all other means of regular military offence, he found, on the banks of the Onondaga, now called Oswego riner, a tree, on the trunk of which the Indiang bad depicted the French ermy, and deposited two buadles of cut rushes at its foot, consisting of 1434 pieces-an act of defiance on their part, which was intended to inform their invaders, that they would have to encounter this namber of warciors. In speaking in another passage of the general traits of the Five Nalions, he mentions tha general custom prevalent among the Mobatrks going to war, of painting, with red paint, on the crunk of a tree, such aymbola, as might sarve to denote the object of their expedition. Amoag the devicea was a cance pointed towarde the enemies country. On their return, it was their practice to visit the same tree, or precinct, and denote the result: the canoe being, in this case, drawn with ita bow in the opposite direction. Lafitou, in his account of the nations of Canada, makes obeervations on this sabject to which we shall more particularly refer hereafter, which denote the geveral prevalence of the custon in that quarter. Other writern, dating as far back an Sroith and de $\mathrm{Br} e$, bear a pasaing tertimony to the existence of this trait among the northern triber Few heve however done more than notice it, and none ara known to have furnished any amount of connected details.

A single element in the systen attracted early notice. I allude to the jmetitation of the Totem, which has been well known among the Algonquin tribee from the settlement of Canada: By this device, the early miasionaries abserved, that the natives marked their division of a tribe into clans, and of a clan into families, and the diestinction was thue very elearly presorved Affinities wers denoted and kopt up, long after tradi-

[^5]tion had failed in its testimony. This distinction, which is-marked with much of the certainty of heraldic bearings in the feudal sytem, was seen to mark the arms, the lodge, and the trophies of the chief and wartior. It was likewise employed to give identity to the clan of which he was a member, on his ad-je-da-teg or grave-post. This record went but little farther; a fews strokes or geometric devices were drawn on these simple monuments, to denote the number of men he had slain in battle.

It has not been suspected in any notices to which I have had access, that there was a pictorial alphabet, or a series of homophonous figures, in which, by the juxtaposition of symbols representing acts, as well as objects of action, and by the introduction of simple adjunct signs, a series of disjunctive, yet generally connected ideas, were denoted; or that the most prominent incidents of life and death could be recorded so as to be transmitted from one generation to another, as long at least as the monument and the people endured. Above all, it was not anticipated that there should have been found, as will be observed in the subsequent details, a system of symbolic notation for the songs and incantations of the Indian metas and priests, making an appeal to the memory for the preservation of language.

Persons familiar with the state of the western tribes of this continent, particularly in the higher northern latitudes, have long been aware that the songs of the Indian priesthood, and wabenoes, were sung from a kind of pictorial notation, made on bark. It is a fact which has often come to the observation of military officers performing duties on those frontiers, and of persons exercising occasional duties in civil life, who have passed through their territories. But there is no class of persons to whom the fact of such notations being made, is so well known, as the class of Indian triders and interpreters who visit or reside a part of the season at the Indian villages. I have never conversed with any of this latter class of persons to whom the fact of such inscriptions, made in various ways, was not so familiar as in their view to excite no surprise or even demand remark.

My attention was first called to the subject in 1820. In the summer of that year I was on an exploring journey through the lake country. At the mouth of the small river Huron, on the banks of Lake Superior, there was an Indian grave fenced around with saplings, and protected with much care. At its head stood a post, or tabular stick, upon which was drawn the figure of the animal which was the symbol of the clan to which the deceased chief belonged. Strokes of red paint were added to denote, either the number of war parties in which he had been engaged, or the number of scalps which he had actually taken from the enemy. The interpreter who accompanied us, and who was himself tinctured with Indian blood, gave the latter, as the true import of these marks.

On quitting the river St. Louis, which flows into the head of the lake at the Fond du Lac, to cross the summit dividing its waters from those of
the Mississippi, the way led through heavy and dense woods and swamps, and the weather proved dark and rainy, so that, for a couple of days together, we had scarcely a glimpse of the sun.

The party consisted of sixteen persons, with two Indian guides; but: the latter, with all their adroitness in threading the maze, were completely at fault for nearly an entire day. At night we lay down on ground elevated but a few inches above the level of the swamp. The next morning as we prepared to leave the camp, a small sheet of birch bark containing devices was observed elevated on the top of a sapling, some 8 or 10 feet high. One end of this pole was thrust firmly into the ground leaning in the direction we were to go. On going up to this object, it was found, with the aid of the interpreter, to be a symbolic record of the circumstances of our crossing this summit, and of the night's encampment at this spot. Each person was appropriately depicted, distinguishing the soldiers from the officer in command, and the latter from the scavans of the party. The Indians themselves were depicted without hats, this being, as we noticed, the general symbol for a white man or European. The entire record, of which a figure is annexed, accurately symbolized the circurnstances, and they were so clearly drawn, according to their conventional rules, that the intelligence would be communicated thereby to any of their people who might chance to travel or wander this way. This was the object of the inscription.

Fig. No. 1. represents the subaltern officer in command of the party of the U. S. troops. He is drawn with a sword to denote his official
rank. No. 2 denotes the person who officiated in quality of Secretary. He is represented holding a book. No. 3 denotes the geologist and mineralogist of the party. He is drawn with a hammer. Nos. 4 and 5 are attaches ; No. 6, the interpreter.

The group of figures marked 9 represents eight infantry soldiers, each of whom, as shown in group 'No. 10, was armed with a musket. No. 15 denotes that they had a separate fire, and constituted a separate mess. Figures 7 and 8 are the two Chippewa guides, the principal of whom, called Chamees, or the Pouncing-hawk, led the way over this dreary summit. These are the only human figures on this unique bark letter, who are drawn without a hat. This was the characteristic seized on, by them, and generally employed by the tribes, to distinguish the Red from the white race. Figures 11 and 12 represent a prairie hen, and a green tortoise, which constituted the sum of the preceding day's chase, and were eaten at the encampment. The inclination of the pole, was designed to show the course pursued from that particular spot: there were three hacks in it, below the scroll of bark, to indicate the estimated length of this part of the journey, computing from water to water, that is to say, from the head of the portage Aux Couteaux on the St. Louis river, to the open shores of Sandy lake, the Ka-ma-ton-go-gom-ag of the Odjibwas.

The story was thus briefly and simply told ; and this memorial was set up by the guides, to advertise any of their countrymen, who might chance to wander in that direction, of the adventure-for it was evident, both from this token, and from the dubiousness which had marked the prior day's wanderings, that they regarded the passage in this light, and were willing to take some credit for the successful execution of it.

Before we had penetrated quite to this summit, we came to another evidence of their skill in this species of knowledge, consisting of one of those contrivances which they denominate Man-i-to-wa-teg, or Manito Poles. On reaching this our guides shouted, whether from a superstitious impulse, or the joy of having found a spot they certainly could recognize, we could not tell. We judged the latter. It consisted of eight poles, of equal length, shaved smooth and round, painted with yellow ochre, and set so as to enclose a square area. It appeared to have been one of those rude temples, or places of incantation or worship, known to the metas, or priests, where certain rites and ceremonies are performed. But it was not an ordinary medicine lodge. There had been far more care in its construction.

On reaching the village of Sandy lake, on the upper Mississippi, the figures of animals, birds, and other devices were found, on the rude coffins, or wrappings of their dead, which were scaffolded around the precincts of the fort, and upon the open shores of the lake. Similar devices were also observed, here, as at other points in this region, upon their
arma, warclubs, canoee, and other pieces of moveable property, as well as upon their grave posts.

In the descent of the Mississippi, we observed such devices painted on a rock, below and near the mouth of Ellk river, and at a rocky island in the river, at the Lirle Falls. In the course of our descent to the Falls at SL Anthony, we observed anoher barik letter, as the party now began to call these inscriptiona, suspended on a high pole, on an elevated bank of the river, on its west shore. At this spot, where we encamped for the Dight, and which is just opposite a point of highly cryzalized homblende sock, called the Peace Rock, rising up through the prairie, there were left tanding the poles or skeletons of a great number of sioux lodges. It is near and a litrle west of the territorial boundary of the Sioux nation; and on inspecting this acroll of bark, we found it had reference to a negociation for bringing about a permanent peace between the Sioux and Chipper was. A large party of the former, from St. Peter's, headed by their chief, had proceeded thus far, in the hope of meeting the Chippessa hunters, on their summer hunt. They: had been countonanced, or directed in this atep, by Col Leavenworth, the commanding officer of the new post, just then about to be erected. The inscription, which was read off at once, by the Chippewa Chief Babesacundabee, who was with us, told all this; it $g^{a v e}$ the arme of the Chief who had led the party, and the number of his followers, and gave that chief the first assurance he had, that his mission for the same purpees, would be favourably received.

After our arrival at St Anthony's Falls, it wes found that this system of picture writing was as familiar to the Dacotah, as we had found it among the Algonquin race. At Prairie du Chien, and at Green Bay, the sarne evidences were observed among the Monomonees, and the Winnebagoes, at Chicago among the Pottowotiomies, and at Michilimakinne, among the Chippewas and Outamas who resort, in such numbers, to that Island. While at the latter place, on my retura, 1 went to visit the grave of a noted chief of the Monomonee, tribe, who had been known by hia French name of Toma, i. e. Thomas. He had been buried on the bill west of the village; and on looking at his Ad-je-datig or grave post, it bore a pictorial inscription, commemorating some of the prominent echievements of his life.

These hints served to direct my attention to the subject when I returned to the country in 1822. The figures of a deer, a bear, a turtle, and a crane, according to this system, stand reapectively for the names of men, and preserve the language very well, by yielding to the person conversant with it, the corresponding words, of Addick, Muckwa, Mickenock, and Adjeejauk Marks, circles, or dots, of various kinds, may symbolize the number of warlike deeds. Adjunct devicea may typify or explain adjunct acts. If the system went no farther, tho record would yield a kind of information both gratifying and useful to one of his countrymen who had
no letrers and was expert in the use of symbols; and the interpretation of it, would be easy and precise in proportion as the signs were general, conventional, abd well understood. There was abundant evidence in my first year's observation, to denote that this mode of communication was in vogue, and well understood by the northern tribes; but it hardly seemed susceptible of a farther or extended use. It was not till I had made a personal acquaintance with one of their Medas-a man of much intelligence, and well versed in their customs, religion, and history, thal a more enlarged application of it appeared to be practicable. I obaerved in the hands of this man a tabular piece of wood, covered over on both sides, with a series of devices cut between parallel lines, which be referred to, as if they were the notes of his raedicine and mystical songs. I heard him sing these songs, and observed that their succession was fixed and ariform By cultivating his acquaintance, and by suitable uttention and presents, such as the occasion rendered proper, be consented to explain the meaning of each figure, the object symbolized, and the words attached to each symbol. By this rcvelation, which was made with closed doors, I became a member or initiate of the Medicine Society, and also of the Wabeno Society. Care was taken to write each sentence of the songs and chants in the Indian language, with its appropriate devices, and to aubjoin a literad translation in English. When this had been done, and the system considered, it was very clear that the devices were mnemonicthat any person could sing from these devices, very accurately, whet he had previously committed to memory, and that the system revealed a cusions scheme of symbolic notation.

All the Gigures thus employed, as the initintory pointa of study, related aclacively $w$ either the medicine dance, or the wabeno dance; and each mection of figures, related exclusively to one or the otber. There was no intermixture or commingling of characters, although the class of suhjects were sonetimes common to each It was perceived, sabsequently, that this classification of symbols exteuded to the songs devoted to war, to hunting, and to other specific topics. The entire inscriptive system, reaching from its first rudimental characters, in the ad-je-datig, or grave board, to the extended roll of bark covered with the incriptions of their magicians and prophets, derived a new interest from this featurc. It was casy to perceive that much comparative precision was imparted to interpretations in the hands of the initiated, which before, or to others, had very lithle. An interest was thus cast over it discinct from ils novelty. And in truth, the encire pictorinl system was thus invested with the character of a subject of acurate invertigation, which promised both interest and instruction.

It has been thought that a simple statement of these circumstances, would best answer the end in view, and might well occupy the place of a more formal or profound introduction. In bringing forward the elements
of the system, after much reflection, it is though, however, that a few romarks on the general character of this art may not be out of place. For, cimple as it is, we percaive in it the native succedaneum for letters. It is not only the sole graphic mode they have for communicating ideas, but it is the mode of communicating all classes of ideas commonly entertained by them-such as their ideas of war, of hunting, of religion, and of magic and necromancy. So considered, it reveals a new and unsuspected rode of ohtaining light on their opinions of a deity, of the structure or casmogony of the globe, of astronomy, the various classes of natural objects, their ideas of immortality and a future state, and the prevalent notions of the union of spiritual and material matter. So wide and varied, indeed, is tho sange opened by the subject, that we may consider the Indinn system of picture writing as the thread which ties up the scroll of the Red man's views of life and death, reveale the true theory of hia hopes and fears, and denotes the relation be bears, in the secret chambers of his own thoughts, to his Maker. What a seoic and euspicious temper would often bold him back from uttering to another, and what a limited language would sometimes prevent his fully revealing, if he wished, symbola and figures can be made to represent and express. The Indian is not a man prone to describe his god, hut he is ready to depict him, by a symbol. He may conceal under the figures of a serpent, a turtle, or a wolf, wisdom, strength, or malignity, or convey ander the picture of the sun, the idea of a supreme, all-seeing intelligence. But he is not propared to discourse upon these things. What he believes on this head, ho will not declare to a white man or a stradger. His happiness and succea in life, are thought to depend upon the secrecy of that knowledge of the Creator and hia system in the Indian view of benign and malignans agents. To reveal this to others, aren to his own people, is, he believen, to expose himself to the counteracting influence of other agents known to his subtle scheme of necromancy and superstition, and to hazard success and life iteelf. This conduces to make the Red man eminently a man of fear, suspicion, and secrecy. But be cannot avoid some of thess disclosures in bis pictures and figures. These fignres represent ideaswhole ideas, and their justaposition or relation on a roll of berk, a tree, or a rock, discloses a continuity of ideas. This is the basis of the sysem.

Picture writing is indeed the literature of the Indiens. It cannot be interpreted, however rudely, without letting one know what the Red man thinks and believes. It shadows forth the Indian intellect, it atands in the place of letters for the Unishinaba. - It shows tho Red man in all periods of our history, both as he was, and as he is ; for there is nothing more true than that, save and except the comparatively few instaicea Where they have truly embraced experimental christianity, there has not

[^6]bean beyond a few enternal custioms, such as dress, dec., any apprecinble and permanent change in the Indian character since Columbua firat dropped anchor at the island of Guanahana.
(To bo confinued.)

## GRAVE CREEK MOUND.

Thus gigantic tumulus, the largest in the Ohio valley, was opened some four or five years ago, and found to contain some articles of high antiquarian value, in addition to the ordinary discoveries of human bones, \&ce A rotunda was built under its centre, walled with brick, and roofed over, and baving a long gallery leading into it, at the base of the mound. Around this circular wall, in the centre of this heary and damp mass of earth, wihh its atmosphere of peculiar and pungent character, the skeletons and other disinterred articles, are hung up for the gratification of viniters, the whole lighted up with candles, which have the effect to give a strikingly sepulchrel air to the whole scene. But what adds most to this effech is a kind of exuded flaky mater, very white and sof, and rendered brilliant by dependent drops of water, which hangs in rude festoons from the ceiling.

To this rotunda, it is said, a delegation of Indians paid a visit a year or two since. In the "Wheeling Times and Advertiser" of the 30th August 1843, the following communication, respecting this visi, introducing a short dramatic poem, was published.
"An aged Cherokes chief who, on his way to the west, sigited the romunda excavated in this gigantic tumulus, with is skeletons and other relics arranged around the walls, became so indigrant at the desecration and display of sepulchral secrets to the white race, that his companions and interpreter found it difficult to reatrain him from assassinating the gride. His language assumed the tone of fury, and he brandisbed his knife, as they forced him out of the passage. Scoon after, he was found prostrated, with his senses steeped in the influence of alcohol
"'Tis not enough! that hated race
Should hunt us out, from grove and place
And consecrated shore-where long
Our fathers raised the lance and song-
Tis not enough 1-that we must go
Where streams and rushing fountains flow
Whose murnurs, heard amid our fears,
Fall only on a stranger's ears-
'Tis not enough !-that with a mand,
They sweep away our pleasant land,
And bid us, as some giant-foe,
Ot willing, or anwilling gol
But they mast ope our very graven
To tell the dead-they too, are slare."

# GEOGRAPHICAL TERMLNOLOGY OF THE U. STATES, 

## DERIVED FROM THE INDIAN LANGUAGE.

These Extrats are made from "Cycopodia Indiantis" a MS. work in preparation.
No. I.
Hudson River.-By the tribes who inhabited the area of the present County of Dutchess, and other portions of its eastem banks, as low down as Tappan, this river was called Shatemuc-which is believed to be a derivative from Shata, a pelican. The Miuisi, who inhobited the west banks, below the point denoted, extending indeed over all the east half of New Jersey, to the fails of the Raritan, where they joined their kindred the Ienni Lenape, or Delawares proper, called it Mohicanittuck-that is to say, River of the Mohicans. The Mohawks, and probably the other branches of the Iroquois, called it Cahohatatea-a term of which the interpreters who have furnished the word, do not give an explanation. The prefixed term Caho, it may be observed, is their name for the lower and principal falls of the Mohawk. Sometimes this prefix was doubled, with the particle $h a$, thrown in between. Hatatea is clearly one of those descriptive and affirmative phrases representing objects in the vegetable and minera! kingdoms, which admitted as we see, in other instances of their compounds, a very wide range. By some of the more westerly Iroquois, the river was called Sanataty.

Adnavy.-The name by which this place was know'n to the Iroquois, at an early day, was Schenectady, a term which, as recently pronounced by a daughter of Brant, yet living in Canada, has the still harsher sound of Skoh-nek-ta-ti, with a stress on the first, and the accent strongly on the second syllable, the third and fourth being pronounced rapidly and short. The transference of this name, to its present location, by the Eng lish, on the bestowal on the place by Col. Nichols, of a new name, derived from the Duke of York's Scottish title, is well known, and is stated, with some connected traditions, by Judge Benson, in his eecentric memoir before the New York Historical Society. The meaning of this name as derived from the authority above quoted, is Beyond the Pines, having been applied exclusively in uncient times, to the southern end of the aneient portage path, from the Mohawl to the Hudson. By the Minci, who did not live here, but extended, however, on the west shore above Coxackie, and even Coeymans, it appean to have been called Gaishtinic. The Mohegans, who long continted to oceupy the present area of Rensselear and Columbia counties, called it Pempotawuhut, that is to say, the City or Place of the Council Fire None of these terms appear to bave .
found favour with the European setllers, and, together with their prior names of Beaveroryck and Fort Orange, they at once gave way, in 1664, to the present name. A once noted eminence, three miles west, on the plains, i. e. Trader's Hill, was called Isutchera, or by prefixing the name for a hill, Yonondio Isutchera. It means the hill of oil. Norman's Kill, which enters the Hudson a little helow, the Mohawks called Towasentha, a term whicb is translated by Dr. Yates, to mean, a place of many dead.

Nlagari-It is not in unison, perhaps, with general expectation, to find that the exact translation of this name does not entirely fulfil poetic preconception. By the term O-ne-aw-ga-ra, the Mohawks and their co-tribes described on the return of their war excursions, the neck of water which conncets lake Eric with Ontario. The term is derived from their name for the human neck. Whether this term was designed to have, as many of their names do, a symbolic import, and to denote the importance of this communieation in geography, as connecting the hend and heart of the country, can only he conjectured. Nor is it, in this instance, probable. When Europeans came to see the gigantic falls which marked the strait, it was natural that they should heve supposed the name descriptive of that particular feature, rather than the entire river and portage. We hava been assured, however, that it is not their original name for the water-fall, although with them, as with us, it may have absorbed this meaning.

Beffalo.-The name of this place in the Seneca, is Te-ho-sa-ro-ro. Its import is not stated.

Detrort.-By the Wyandots, this place is called Teuchsagrondie; by the Lake tribes of the Algic type, Wa-we-f-tun-ong: both terms signify the Place of the turning or Turned Channel. It has been remarked by visiters who reach this place at night, or in dark weather, or are otherwise inattentive to the courses, that owing to the extroordinary involutions of the current the sun appenrs to rise in the wrong place.

Chtcaco.-This name, in the Lake Algonquin dialects, to preserve the same mode of orthography, is derived from Chicagowunzh, the wild onion or leek. The orthography is French, as they were the diseoverers and early settlers nf this part of the west. Knug, in these dielects is a poreupine, and She lang a polecat. The analogies in these words are apparent, hut whether the onion wis named before or after the animal, must be judged if the age of the derivation be sought for.

Toschloosa, a river of Alabama. From the Chacta words tushka, a warrior, and lusa black.--Gallatin.]

Alagisce, the Iroquais name for Virginia.
Assarigoa, the dame of the Six Nations for the Grovernor of Virginia Ovenagungas, a general name of the Iroquais for the New England Indians,

Otesbonreo, a spring which ts the heard of the river Detaware.

Ontonacor; a considerable river of lake Superior, noted from early times, for the large mass of native copper found on ita banks. This name is suid to have been derived from the following incident. It is known that there is a smull bay and dead water for some distance within its mouth.' In and out of this embayed water, the lake alternately flows, according to the influence of the winds, and other causes, upon ita level An Indian woman had left her wooden dish, or Onagon, on the eands, at the shore of this litule bay, where she bad been engaged. On coming back from her lodge, the outflowing current had carried off her volced atensil. Nia Nin-do-nau-gon 1 she exclaimed, for it was a curious piece of workmanship. That is to say-Alas! my dish!

Chtah-naf-whab-inab, or Valley of the Mountains. A new pass in the Rocky Mountains, discovered within a faw years. It is supposed to be in $\mathbf{N}$. latitude about $40^{\circ}$. The western end of the valley gap is 30 miles wide, which narrows to 20 at its eastern termination, it then turns oblique to the north, and the opposing sides appear to close the pass, yet there is a narrow way quite to the foot of the mountain. On the summit there is a large beaver pond, which has outlets both ways, but the eastern stream dries early in the season, while there is a continuous flow of water west In its course, it has several beautiful, but low cascades, and terminates in a placid and delightful stream. This pass is now used by enigrants.

Aquidneci.-The Narragansett name for Rhode Island. Roger Wil liams observes, that he could never obtain the meaning of it from the natives. The Dutch, as appears by a map of Novi Belgii published at Amaterdam in 1659, called it Roode Eylant, or Red Island, from the autumnal colour of ita foliage. The present term, as is noticed, in Vol. WI. of the Collections of the R I. Hist. Soc. is derived from this,

Incapatchow, a beautiful lake in the mountains at the sources of the river Hudson.-[Charles F. Hofman, Esq.]

Hocsatonc; a river originating in the south-western part of Massachusetus, and flowing through the Stale of Connecticut into Long Island Sound, at Surauford It is a term of Mohegan origin This tribe on retiring eastrord from the banks of the Hudson, passed over the High-lands, into this inviting valley. We have no transmitted etymology of the term, and must rely on the general principles of their vocabulary. It appears to have been called the valley of the stream beyond the Mountaina, from ou, the notarial sign of wudjo, a mouncain, atun, a generic phrase for stream or channel, and ic, the infection for locality.

Wra-nod-nec.-The Indian name, as furnished by Mr. O'Sullivan, [D. Rev.] for Saddle Mountain, Massachuselis. It appears to ba a derivar tive from We-we-a, round, i. e. any thing round or crooked, in the inanimate creation.

Ma-mar-we; The Mohegan term, as given by Mr. Bryant [N. Y. E. P.] for Great Barrington, Berkshire County, Massachusette.

Massecruberts.-This was not the name of a particular tribe, but a geographical term applied, it should seem, to that part of the shores of the North Allantic, which is swept by the tide setting into, and around the peninsals of Cape Cod, and the wide range of coast trending southerly. It became a generic word, at an early day, for the tribes who inhabited this coast. It is said to be a word of Narragansett origin, and to signify the Blae Hills. This is the account given of it by Roger Williams, who was told, by the Indians, that it had it origin from the appearance of an island off the coast It would be more in conformity to the general requinitions of ethnography, to denominate the language the New Eng-hnd-Algonquin, for there are such great resemblances in the rocabulary and such an identity in grammatical construction, in these tribes, that we are constandy in danger, by partial conclusions as to original supremacy, of doing injustice. The source of origin was doubtless west and south west, hut we cannot stop at the Narragansetts, who were thenselves derivative from tribes still farther south. The general meaning given by Williams seems, however, to be sustained, so far an can now be judged. The sorminations in ett, and set, as well as those in at and ak, denoted locality in these varions tribes. We see aloo, in the antipenultimate Chu, the root of Wadjo, a mountrin.
$\mathrm{T}_{\mathbf{A}} \cdot \mathrm{H} \mathbf{s}$-wus, a very commendiog elevation, several thousand feet above the sea, which has of late yeare, been discovered at the sources of the Hudson, and named Mount Marcy. It signifies, be splita the aky.[Charles F. Hoffman, Esq.]
Mong, the name of a distinguished chief of Nem England, as it appeara to be recorded in the ancient pictorial inscription on the Dighton Rock, in Massachusetts, who flourished before the country was colonized by the English He was both a war capain, and a prophet, and employed the arts of the latter office, to increase his power and influence, in the former. By patient application of his ceremonial arrs, he secured the confidence of a large body of men, who were led on, in the attack on his enemien, by a man named Piz-hu. In this onset, it is claimed that he killed forty men, and los three. To the warrior who should be succesful, in this orterprize, he bad promised his yonnger sister. [Such are the leading events symbolized by this inscription, of which extracts giving full details, as interpreted hy an Indian chief, now living, and read before the Am. Ethnological Society, in 1843, will be furnished, in a subsequent number.]

Troos-A stream, and a county of the Stars of New-York. From Teoga, a swift current, exciting admiration.

Dionderoca, an ancient name of the Mohawk tribe, for the site at the mouth of the Schoharie creek, where Fort Hunter was afterwards buile [Col W. L Stone]

Alwouchico, e generic name of the Indians for New England, as printed
on the Amsterdam map of 1659 , in which it is stated that it wis thus "by dinwoonders genaemt" (So named by the natives.)

Inocorsu, a name bestowed in the map, above quoted, on that porion of the present state of Vermont, which lies west of the Green Mountains, stretching along the eastern bank of Lake Champlain. By the application of the word, it is perceived that the French were not alone in the use they made of the apparently derivative term "Iroquois," which they gave to the (then) Five Nations.

## AMERICAN ANTIQUITIES.

It is desirable that all the remains of the original inhabitants of our soil, which are discovered, should be preserved. We know, from frequent examples, that many persons in our country feel an interest in such objecta; but they are scattered individuals, and seldom found together or in correspondence with each other. Probably one such person might be met with in almost every neighhorhood; but it is diffeult to keep up much interest in a subject to which others around us are indifferent.

We wish to have it gencrally understood, that American antiquities are worthy of attention and study, and that they are rising in importance in the opinions of many intelligent people, both at home and abroad. We urgently invite all, who have the opportunity, to collect and preserve objects connected with history, to seek for local traditions and record them with the evidences, and to forward to the editor of this work, by private hands, such information with local names, queries \&c.-E.

The influence of association is benign, if it bo but the association of barbarians.

Were it not for woman, the Indians would beas teckless tavages as the animals they hunt.

The duty of caring for others, teaches the hunters to care for themselves.

If the Indian ferale be compered to a shadow, it is a shadow which roflects the safter outlines of the substance. There is a grase and modesty in the rudest female of the forest

Ridicule is very powerful on the mind of an Indian. He can bear the faggot, better than the taunt of laughter. I knew an instance of a young Saganaw, who took up a pot ladle and fractured the skull of an elderly humter, because the latter laughed at him, for a great swelling that had taken place on a part of his body, owing to a fall froma tree.

## INDIAN MUSIC, SONGS, AND POETRY.

No. 1.

The North American ribes have the elements of music and poetry. Their war songe frequently contain flights of the finest heroic sentiment, clothed in poetic imagery. And numbers of the addresses of the speakers, both occasional and public, abound in eloquent and poetic thought " We would anticipate eloquence," observes a modern American writer, " from an Indian. He has animating remembrances-a poetry of language, which exacts rich and apposite metaphorical allusions, even for ordinary conversation-a mind which, like his body, has never been trammelled and mechanized by the formalities of eociety, and pasions which, from the very outwerd restraint imposed upon them, barn more fiercely within." Yet, it will be found that the records of our litarature, scattered as they are, in periodicats and ephemeral publications, rather than in works of professed research, are meagre and barren, on these topics. One of the first things we hear of the Indians, after their discovery, is their proneness to singing and dancing. But however characteristic these trits may be, and we think they are eminently so, it has fallen to the lot of but few to put on record specimens, which may be ap pealed to, as evidences of the current opinion, on these heads. With favourable opportunities of observation among the tribes, we have hut to add our testimony to the difficulties of making collections in these departments, which shall not compromit the intellectual character of the tribee, whose efforts are always oral, and very commonly extemporaneous. These difficulties arise from the want of suitahle interpreters, the remoteness of the pointa at which observations must be made, the heavy demands made apon hours of leisure or basiness by such inqairies, and the inconvenience of making notes and detsiled memoranda on the apot. The litule that it is in onr power to offer, will therefore be submitted as contributions to an inquiry which is quite in its infancy, and rather with the hope of exciting others to future labours, then of gratifying, to any extent, an enlightened curiosity on the subject.

Dancing is beth an amusement and a rehgions observance, among the American Indians, and is known to constitute one of the most wide spread traits in their manners and customs. It is accompanied, in oll eases, with singing, and, omitting a few cases, with the beating of time on instruments. Tribes the most diverse in language, and sizacted at the greatest distances apart, concur in this. It is believed to be the ordinary mode of expressing intense passion, or feeling on any subjects and it ia a eustom
which hat been persevered in, with the least variation, through all the phases of their history, and probably exiots among the remote tribes, precisely at this time, as it did in the era of Columbus. It is observed to be the last thing abandoned by bands and individuals, in their progress to civilization and christianity. So true is this, that it may be regarded as one of the beast practical proofs of their advance, to find the native inatruments and music thrown hy, and the custom abandoned.
Every one has heard of the war dance, the medicine dance, the webeno dance, the dance of honour (generally called the begging dance, and various ohhers, each of which has its appropriate movements, its air, and ils words. There is no feast, and no religious ceremony, among them, which is not attended with dancing and songs. Thanks are thus expressed for success in hunting, for triumphs in war, and for ordinary providential cares. Public opinion is called to pressing objects hy a dance, at which addreeses are made, and in fact, moral instructions and advice are given to the young, in the course of their being assembled at social feasts and dances. Dancing is indeed the common resource, whenever the mass of Indian mind is to be acted on And it thus stands viewed in its necessary connection with the songs and addresses, in the room of the preas, the newspaper, and the periodical The priests and prophetr bave, more than any other class, cultivated their national songe and dances, and may be regarded as the skalds and poets of the tribes. They are generally the composers of the songs, and the leaders in the dance and ceremonies, and it is found, that their memories are the best stored, not only with the sacred soage and chants, hut also with the tradjtions, and general lore of the tribes.

Dancing is thus interwoven throughout the whole terture of Indian eociety, so thar there is scarcely an event imporant or trivial, privale or pnblic, which is not connected, more or less intimately, with this rite. The instances where singing is adopted, without dancing, are nearly corfined to occurrencea of a domestic character. Among these, are wails for the dead, and love songs of a simple and plaintive character. Maternal affection evinces itself, by singing worde, wa cheerful air, over the alambers of the child, which, being suspended in a hind of cradle receives, at the same time avibratory motion. Children have likewise certain chanth, which they utter in the evenings, while playing around the lodge door, or af other seesons of youthful hilarity. Some of the Indian fablee are in the shape of dueta, and the songs introduced in nerrating their fictitious tales, are always sung in the recital

Their inscruments of music are faw and simple. The only wind inerament eristing among them is the Pibbogwon, a hind of fute, resempbling in aimplicity the Arcadian pipe. It is commanly made of two somicylindrical pieces of cedar, mitted with fish glue, and having a snake skin, in a wet state, drawn tighty over it, to preveat ita cracling. The holet
are eight in number, and are perforated by means of a bit of heated iron It is blown like the flagolet, and has a aimilar orifice or mouth piece.

The Tarwargous, (aruck-tound-inatrument) is a tamborine, or onobeaded dram, and is made by edjusting a skin to one end of the rection of a moderate sized hollow tree. When a heavier sound is required, a tree of larger circumference is chosen, and both ends closed with skins The later is called Mrmoworessk, i. e. Wood-Ketule-Drum, and is appropriately used in religious ceremonies, bat is not, perhaps, confined to this occarion.

To these may be added a fourth instrument, called the Sirsabowor, or Ratte, which is constructed in rarious ways, according to the purpose or means of the malcer. Sometimen it im made of animal bladder, from which the name is derived, somefines of a wild gourd; in others, by attaching the dried hoofs of the deer to a sick. This inatrument is employed both to marl time, and to produce variety in sound.

## ORAL COMPOSITION.

Common as the Indian songt are, it is found to be no ordinary acquiriton to abtain accarate specimens of them. Even after the difficultiea of the notation have been accomplished, it is not easy to atiafy the requisinions of a correct taste and judgment, in their exhibition. There is alwisys a lingering fear of misapprehension, or misconception, on the part of the interpreter-or of some things being withheld by the never sleeping surpicion, or the superstitious fear of disclosure, on the part of the Indian. To these muat be added, the idiomatic and imaginative peculiarities of this species of wild composition-so very different from every notion of English versification. In the first place there is no unity of theme, or plot, unless in be that the subject, war for instance, is kept in the singer's mind. In the next place both the narration and the description, when introduced, is very imperfect, broken, or disjointed. Prominent ideas flabh ont, and are dropped. These are often most striking and beautifol, bat we wait in vain for any sequence. A brief allusion-a shining fymbol, a buret of fealing or passion, a fine sentiment, or a bold assertion, come in as so many independent parts, and there is but little in the composition to indicate the leading theme which is, an it were, tept in mental reserve, by the singer. Popular, or favourite expressions are often repeated, often transposed, and often exbibited with some new ahade of meaning. The stracture and fexibility of tbe language in highly favourable to thio kind of wild improvisation. But it is difficult to translate, and next to imposihle to preserve its spirit, Two languages more unlike in all their leading characteristics, than the English and the Indian were never brought into contact. The one monoryllahic, and nearly withont inflections-the other polysyllabic, polysyzthetic and so full of inflectinna
of every imaginative kind, us to be completely transpositive-the one from the north of Europe, the other, probahly, from Central Asia, it would seem that these families of the human race, had not wandered wider apant, in their location, than they have in the sounds of their lauguage, the accidence of their grammar and the definition of their words. So that to find equivalent single words in translation, appears often as hopeless as the quadrature of the circle.

The great store-house of Indian inngery is the heavens. The clouds, the planets, the sun, and moon, the phenoment of lightning, thunder, electricity, aerial sounds, electric or atmospheric, and the endless variety produced in the heavens by light and shade, and hy elemental action,--these constitute the fruiful themes of allusion in their songs and poetic chants. But they are mere allusions, or broken description, like touches on the canvas, without being uoited to produce a perfect object. The stroked may be those of a maser, and the colouring exquisite ; but without the ant to draw, or the skill to connect, it will still remain but a shapeless mass

In war excursions great attention is paid to the fight of birds, particularly those of the carnivorous species, which are deemed typical of war and bravery, and their wing and tail feathers are appropriated as marks of honor, by the successful warrior. When the minds of a war party have been roused up to the subject, and they are prepared to give uterance to their feelings by singing and dancing, they are naturally led to appeal to the agency of this class of birds. Hence the frequent allusions to them, in their songs. The following stanza is made up of expressions brought into cor nection, from different fragmonts, but expresses no more than the native sentimento :

> The engles scream on high,
> They whet their forked beak,
> Rnise-rnise the battle cry,
> 'Tis fame our leader seeks.

Generally the expressions are of an exnlted and poetic character, but the remark before made of their effors in song, being discontinuous and abrupt, apply with peculiar force to the war songs. To speak of a brave man-of a battle-or the scene of a batcle, or of the hovering of birds of prey above it appears sufficient to bring up to the warrior's mind, all the details consequent on personal bravery or heroic achievement. It would naturally be expected, that they should delight to dwell on scenes of carnage and blood: but however this may be, all such denils are omitted or suppressed in their war songs, which only excite ideas of noble daring.

> The birds of the brave take a flight round the sky,
> They cross the enemy's line, Full happy am I -hat my body should fall,
> Where brave men love to dia.

Very litile effort in the collocation and expansion of some of ther sentiments, would impart to these bold and unfettered raphsodied, an attractive form, among polished war songs.

The strain in which these measures are suag; is generally slow and grave in its commencement and progress, and terminates in the bighest note. While tbe words admit of change, and are marked by ail the fluctuation of enterspore composition, the air and tbe chorus appear to be permanent, consiming not only of a graduated succession of fixed sounds, but, always exact in their enunciation, heir quantity, and tbeir witd and starling musical expression. It has elways appeared to me that the Indian music is marked by a nationality, above many other traits, and it is a subject inviting future attention. It is cerain that the Indian ear is exact in ooting musical sounds, and in marking and beating time. But litule observation at cheir dances, will be sufficient to establish this fact Nor is it certain, by attention to the pbilology of their language, that they are exact in beir lnws of euphony, and syllabical quantity. How this remark may consist with the use of unmeasured and fuctrating poetry in their songs, it may require studied attention to answer. It is to be observed, however, that these songs are rather recited, or chanted, than sung. Increments of the chorus are not unfrequently interspersed, in the body of the line, which would otherwise appear deficient in quantity; and perhaps rules of metre may be found, by subsequent research, which are not obvious, or have been concealed by the scantiness of the materials, on this head, which have been examined. To determine the airs and choruses and the character of tbe music, will prove one of the greatest facilities to this inquiry. Most of the graver pieces, which have been written out, are arranged in metres of sixes, sevens, and eights. The lighter chants are in threes or fours, and conaist of iambics and trochees irregubarly. Tbose who have translated hymns into the various languages, have followed the English metres, not always without the necessity of elision, or employing constrained or crampt modes of expression. A worse systern could not have been adopted to show Indian sentiment. The music in all these cases has been like fetters to the free, wild thoughts of the native singer. As a general criticism upon these translations, it may be remarked that they are often far from being literal; and offen omit parts of the original. On the other hand, by throwing away adjectives, in a great degree, and dropping all incidental or side thoughts, and confining the Indian to the leading thought or sentiment, they ore, sometives, rendered more simple, appropriate, and effective. Finally, whatever cultivated minds among the Indians, or their descendants may have done, it is quite evident to me, from the attention I bave been able ta give the subject, that the native compositions were wibhout motre. The patives appear to have sung a sufficient number of syllables to comply with the air, and effected the necessary pauseq, for sense or sound, by either slurring over,
and thus shortening, or by throwing in floating particles of the language, to eke out the quantity, taken either from the chorus, or from the goneral auxiliary forms of the vocabulary.

Rhytae is permited by the similarity of the soands from which the vocabulary is formed, but the structure of the language does not appear to admit of its being successfully developed in this manner. Its forms are too cumbrous for regularly recurring expressions, subjected at once to the lows of metre and rhyma. The instances of rhyme that have been observed in the native songs are few, and appear to be the result of the fortoitous positions of words, rather than of art. The following juvenile seesaw is one of the most perfect specimena noticed, being aract in both particulars:

> Ne osb im aun

Ne way be naun.
These are expressions uttered on sliding a carved stick down snow banks, or over a glazed surface of ice, in the appropriate season; and they may be rendered with nearly literal exacteses, thas:

> My sliding stick
> I send quick—quick.

Not less accurate in the rbyma, but at lines of tix and eight feet, which might perhape be exhibited unbroken, is the following couplet of a war song :

Au pit she Mon e tog
Ne mud wa wi wau we ne gog.
The Spirit on high, Repeata my warlike name.
In the translation of hymns, made during the modern period of missionary effor, there has been no general atempt to secure rhyme; and an these translations are generally due to educated natives, under the inspection and with the critical aid of the missionary, they have evinced a true conception of the genius of the language, by the omistion of this accident Elioh who translated the pealms of David into the Massachusetts language, which were first printed in 1661, appeara to have deemed it important enough to eim at its attainment : butan examination of the work, now before us, gives but little encouragement to ochert to follow his example, at least while the languages remain in their present rude and urcohtivated state. The following is the XXIII Psalm from this version :

1. Mar teag nukquenabbikoo
shepse nemeank God.
Nussepeinwahil ashlcoshqut
nuainuk ohtopagod

2 Nagum nukketeabog kounoh wutomohkinuh wonk Nutues counuk ut sampoi may newutch cowesnonk.
3. Wutonkaubtamut pomushnon muppoconk conaubkoe Wookebettuonk mo nukquek tamoo
newutch koowetomah:
4. Kuppogkomunk kutanwohon nish noonenehikquog Koonochos hkah anquabhettit warne nummatwomog
5. Kussusequinum nuppuhkuk weetepummee nashpea Wonk woi God noctallamwaith pomponetupohs hau
6. Coniyeuonk monaneteonk nueasukkonkquanab Tohsohke pomantam wekit God michern nuttain pish ${ }^{*}$.
This appears to have been rendered from the vercion of the pealms appanded to an old edition of King Jamea' Bible of 1611, and nox from the rerrification of Wats. By comparing it with this, as exhibited below, there will be found the same metre, eights and sixes, the same syllabical quantity, (if the notation be rightly conceived, and the same coincidence of rhyme at the second and fourth lines of each verse; although it required an additional verse to express the entire pealm. It could therefore be sung to the ordinary tunes in use in Eliot's time, and, taken in connection with bis entire version, including the Old and New Testament, ovisces a degree of patient assiduity on the part of that eminent miassionary, which is truly astonishing :

The Lord is my sbepherd, I'll nod want ;
2 He makes me down to lie
In pasturea green: he leadeth me
the quiet waters by.
3. My soul he doth restore again
and me to walk doth make
Within the paths of righteonemeta
E'en for his own name's saka.

[^7]4. Yea, though I walk in death's dark vale, yet will I fear none ill;
For thou art with me and thy rod and staff me comfort still.
5. My table thou hast furnished in presence of my foes;
My head thou dost with oil annoint, and my cup overfows.
6. Goodness and mercy all my life shall surely follow me; And in God's house forevermore my dwelling place shall be.
The barmony of numbers has always detracted from the plain sense, and the piety of thought, of the scriptures, which is the probable cause of so many failures on the suhject. In the instance of this Psalm, it will be observed, by a comparison, that Watts, who has so generally succeeded, does not come up, in any respect, to the full literal meaning of the origr nal, which is well preserved, with the requisite harmony, in the old ver sion.

There is one species of oral composition existing among all the tribes, which, from its peculiarities, deserves to be separately mentioned I alIude to the hieratic chants, choruscs and incantations of their professed prophets, medicine men and jugglers-constituting, as these men do, a dus tinct order in Indian society, who are entitled by their supposed skill, wisdom or sanctity, to exercise the offices of a priesthood. Affecting myt tery in the discharge of their functions, their songs and choruses are couched in language which is studiously obscure, oftentimes eabalistic, and generally not well understood by any but professed initiates.

Nothing, however, in this department of my inquiries, has opened a more pleasing view of society, exposed to the bitter vicissitudes of Indian life, than the little domestic chants of mothers, and the poetic see-saws of children, of which specimens are furnished. These show the universality of the sentiments of natural affection, and supply another proof, were any wanting, to demonstrate that it is only ignorance, indolence and porerty, that sink the human character, and create the leading distinctions among the races of men. Were these affections cultivated, and children early taught the principles of virtue and rectitude, and the maxims of industry, order and cleanliness, there is no doubt that the mass of Indian society would be meliorated in a comparatively short period; and by a continuance of efforts soon exalted from that state of degradntion, of which the want of letters and religion have been the principal causes.

In presenting these specimens of songs, gathered among the recesses of the forest, it is hoped it will not be overlooked, by the reader, that they
are submitted as facts or materials, in the mental condition of the tribes, and not as evidences of attainment in the arts of metre and melody, which will bear to be admited or even criticised by the side of the refined poetry of civilized nations. And above all, not as efforts to turn Indian sentiments to account, in original composition. No such idea is entertained. If materials be supplied from which some judgment may be formed of the actual state of these songs and rude oral compositions, or improvisalions, the extent of the object will have been attained. But even here, there is less, with the exception of a single departmens, i. e. versification and composition by cultivated natives, than it was hoped to furnish. And this little, has been the result of a species of labour, in the collection, quite disproportionate to the result. It is hoped at least, that it may indicate the mode in which such collections may be made, among the tribes, and become the means of eliciting materials more worthy of attention.

This much seemed necessary to be said in introducing the following specimeos, that there might not appear, to the reader, to be an undue estirate placed on the literary value of these contributions, and translationn, while the main object is, to exhibit them in the series, as illustrations of the mental pecaliarities of the tribes. To dismiss them, however, with a bare, frigid word for word translation, such as is required for the purpoess of philological comparison, would by no means do justice to them, por convey, in any tolerable degree, the actual sentimenta in the minds of the Indians. That the opposite error might not, at the same time, be run into, and the reader be deprived altogether of this mcans of comparison, a number of the pieces are left with literal prose translationa, word for word as near as the two languages will permit. Onhers exhibit both a literal, and a versified translation.

All the North American Indians know that there is a God; but their priests teach them that the devil is a God, and as he is believed to be very maliguant, it is the great object of their ceremonies and sacrifices, to appease him.

The Indians formerly worshipped the Sun, as the symbol of divine incelligence.

Fire is an unexplained mystery to the Indian; he regards it as a conmeeting link between the natural and spiritual world. His traditionary lore denotes this.

Zoroaster says: "When you behold secret fire, without form, shiniag ftanhingly through the depths of the whole world-hear the voice of fire." One might suppose thin to have been uttered by a North Amarican Indian.

## EARLY INDIAN BIOGRAPHY.

PISKARET.

There lived a noted chief on the north banks of the St. Lewrence in the latter part of the 16 th century, who was called by the Iroquois, Piskaret, but the true pronunciation of whose name, by his own people, was Bisconace, or the Little Blaze. Names are often arbitmaily bestowed by the Indians, from some trivial circumstance in domestic life, or hunting, as mere nick names, which take the place of the real names: for it is a practice among this people to conceal their real names, from a subtle, superstitious notion, that, if so known, they will be under the power of priesty incantation, or some other evil influence.

What the real name of this man was, if it differed from the above, is not known, as this was his only appellation. He was an Adirondak: that is to say, one of the race of people who were called Adirondaks by the Iroquois, but Algonquins by the French. And as the Algonquins and Iroquois, had lately became deadly enemies and were so then, the distinction to which Bisconace rose, was in the conducting of the war which his people waged against the Iroquois, or Five Nations.
It seems, from the accounts of both English and French authors, that the Algonquins, at the period of the first settlement of the St. Lawrence, were by far the most advanced in arts and knowledge, and most distinguished for skill in war and hunting, of all the nations in North America. This at least is certain, that no chief, far or near, enjoyed as high a reputation for daring valor and skill as Bisconace. He is spoken of in this light by all who name him; he was so fierce, subtle and indomitable that he became the terror of his enemies, who were startled at the very mention of his name. Bisconace lived on the north banks of the St. Lawrence, below Montreal, and carried on his wars against the Indians inhabiting the northern parts of the present state of New York, often proceeding by the course of the River Sorel.

The period of the Adirondak supremacy, embraced the close of the 15th century and the beginning of the luth, and at this time the people began to derive great power and boldness, from the possession of fire arms, with which the French supplied them, before their southern and western neighbours came to participate in this great improvement, this striking era of the Red man, in the art of war. Colden is thought to be a little out, in the great estimate he fumishes of the power, influence, and advances of this great family of the Red Race. The French naturally puiffed them up a good deal; bat we may admit that they were moat expert warriors, and hunters, and manufactured arms and canoes, with great skill. They
were the prominent enemies of the Five Nations; and like all enemies at a distance had a formidable name. The word Adirondak is one of Iroquois origin; bnt the French, who always gave their own names to the Tribes, and had a policy in so doing, called them Algonquins-a terin whose origin is involved in some obscurity. For a time, they prevailed against their enemies south of the St. Lawrence, but the later were soon furnished with arma by the Dutch, who entered the Hudson in 1609 , and their allies, the Iracoson, or Iroquois, soon assumed that rank in war which, if they bad before lacked, raised them to so bigh a point of preeminence. It was in that early period of the history of these aations thas Bisconsce exerted his power.

Where a people have neither history nor biography, there is but little hope that tradition will long preserve the memory of events. Some of the acts of this chief are known through the earlier colonial writers. So great wis the confidenco inspired in the breast of this chief, by the use of fire arms, that he pushed into the Iroquois country like a mad man, and performed some feats against a people armed with bows only, which are astonishing.

With only four chiefs to aid him, he left Trois Rivieres, on one occasion, in a single canoe, with fifteen loaded muskets, thus giving three pieces, to each man. Each piece was charged with two balls, joined by anall chain ten inches long. Soon after entering the Sorel river, he ensonntered five bark canoes of Iroquois, each baving ten men. To cloak his ruse be pretended to give himself up for lost, in view of such a disparity of numbers; and he and his companions began to sing their dach mong. They had no sooner got near their enemies, however, than they began to pour in their chain-shot, riddling the frail eanoes of the enemy, who tumbled into the water, and sank under the active blows of their odversaries. Some he saved to grace his triumphant return, and these were tortured at the stake.

On another accasion he undertook an enterprize alone. Being well aequainted with the Iroquois country, he set out, about the time the snow began to melt, taking the precaution to put the hinder part of bis snowthoes forward to mislead the enemy, in case his track should be discovered. As a further precaution, he avoided the plain forest paths, keeping along the ridges and high stony grounds, where the snow was melting, that his track might be often lost. When he came near to one of the Villages of the Five Nations, he bid himself till night. He then crept forth, and entered a lodge, where he found every soul asleep. Having killed them all, he took their scalps, and went back to his lurking place. The next day the people of the village searched in vain for the perpetrator. At night ho again sallied forth, and repaated the act, on another lodge, with equal secrecy and success. Again the villagers searched, but could find no sraces of his fooctepp. They determined, however, to set a watch Pis
karet, anticipating this, gathered up his scalps, and stole forth slyly, but found the inhabitants of every lodge on the aler, save one, where the sentinel had fallen asleep. This man he despatched and scalped, but alarmed the rest, who rose in the pursuit He has, however, under no great fears of being overtaken. One of the causea of his great confidence in himself was found in the fact that he was the swiflest runner known. He eluded them oflen, sometimes, however, lingering to draw them on, and tire them out. When he had played this trick, be bid himself. His pursuers, finding they had let bim escape, encamped, thinking themselves in safety, but they had no sooner fallen asleep, than he sole forth from his lurking place, and despatched every one of them. He added their scrlps to his bundle of trophies, and then returned.

Recitals of this kind flew from village to village, and gave him the greatest reputation for courage, adroiness and fleetness.

The Five Nations were, however, early noted for their skill in stralagem, and owed their early rise to it They were at this era engaged in their long, fierce and finally triamphant war against the Algonquins and Wyandots, or to adopt the ancient terms, the Adirondaks and Quatoghies.. These hater they defeated in a great battle, fought within two miles of Quebec. In this battle the French, who were in reality weak in number, were neutrai. Their neutrality, on this occasion, happened in this way. They bad urged the reception of priests upon the Five Nations, through whose influence, they hoped to prevail over that people, and to wrest western New York from the power of the Dutch and Englistr. As soon as a number of these missionaries of the sword and cross had insinuated themselves among the Five Nations, the latler seized them, as hostages; and, under a threat of their execution, kept the French quiet in this decisive battle. This scheme had succeeded so well, that it taught the Five Nations the value of negociation; and they determined, the next year, to try another. Pretending that they were now well satisfied with their triumph on the St. Lawrence, they sent word that they meant to make a formidable visit to Yoonendio, this being the official name they bestowed on the governor of Canada. Such visits they always made with great pomp and show ; and on this occasion, they came with 1000 or 1200 men. On the way to Quebec, near the river Nicolet, their scouts met Piskaret, whom they cajoled, and kept in utter ignorance of the large force behind until they had drawn out of him an important piece of information, and then pat bim to death. They cut off his head, and carried it to the Iroquois army. To have killed him, was regarded as an assurance of ultimate victory. These scouts also carried to the army the information, which they bad obtained, that the Adirondaks were divided into two bodies, one of which hunted on the river Nicolet, and the other at a place called Wabmeke, on the north side of the St Lawrence. They immedi-
ately divided their forces, fell upon each body at unawares and cut them both to pieces.

This is the great triumph to which Charlevoix, in his history of New France, alludes. It was the turning point in the war against the confederated Wyandots, and Algonquins, and, in effect, drove both nations, in the end, effectually out of the St. Lawrence valley. The former fled to Lake Huron, to which they imparted their name. Some of the Adirondaks took shelter near Quebec, under the care of the Jesuits; the larger number went up the Utawas, to the region of Lake Nipising ; the Atawairos fled to a large chain of islands in Lake Huron, called the Menaloulins; other bands scattered in other directions. Each one had some local name; and all, it is probable, were well enough pleased to hide their defeat by the Five Nations, under local and geographical designations. But they had no peace in their refuge. The spirit of revenge burned in the breast of the Iroquois, particularly against their kindred tribe, the Wyandots, whom they pursued into Lake Huron, drovethemfromtheir refuge at Michilimackinac, and pushed them even to Lake Superior, where for many years, this ancient tribe continued to dwell.

The pernicious examples of white men, who have conducted the Indian trade, their immoral habits, injustice, and disregard of truth, and open licentiousness, have created the deepest prejudice in the minds of the Red men against the whole European race.

The Indian only thinks when he is forced to think, by circumstances. Fear, hunger and self-preservation, are the three prominent causes of his thoughts. Affection and reverence for the dead, come next.

Abstract thought is the characteristic of civilization. If teachers could induce the Indians to think on subjects not before known to them, or but imperfectly known, they would adopt one of the most efficacions means of civilizing them.

Christianity is ultraism to an Indian. It is so opposed to his natural desires, that he, at first, hates it, and decries it. Opposite states of feeling, bowever, affect him, precisely as they do white men. What he at first hates, he may as suddenly love and embrace.

Christianity is not propagated by ratiocination, it is the result of feelings and affections on the will and understanding. Hence an Indian can become a christian.

## THE SAUSTAWRAYTSEES,

## Ol

## THE ORIGIN OP THE WYANDOT AND EENECA TRIBEB.

## A WYANDOT TRADITION.

Towaris the middle of the seventeenth century, a body of Indians, composed of the Wyandos (or as they weie then called the Saustaw-raytsee) and Seneca tribes inhabited the borders of Lake Ontario. The present Wyandots and Senecus are the remains of this community, and of the cause of their separation and of the relentless hostilities by which it was succoeded, the following details are given in the traditionary history of the Wyandats.

A Wyandor girl, whose name for the sake of distinction shall be Oon-yay-stee, and in whom appeared united a rare combination of moral antractions, and of extraordinary personal beauty, had for her suitors, nearly all the young men of her tribe As insensible however, as beautiful, the attentions of her lovers were productive of no favorable effect, for though none were rejected, yet neither was any one distinguished by her partiality. This unaccountable apathy became, in time, a subject not only of genaral, but of common interest to the young $\mathbf{W}$ yandots. A council composed of those interested in the issue of these many and importunate applications for her fuvor, was held for the purpose of devising some method, by which her intentions in relation to them might be ascertained. At this, when these amourists had severally conceded, each, that he could boasd of no indication of a preference shown by Oon-yay-stce to himself, upon which to found a reasonable hope of ultimately succeeding, it was 6nally determined, that their claims should be withdrawn in favor of the War Chief of their lodge. This was adopted, not so much for the purpose of advan cing the interests of another to the prejudice of their own, as to avoid the humiliauing alternative of yielding the ohject of so much competition to some more fortunate rival not connected with their band.

It may be here necessary to remark that nearly all the suitore belonges to one lodge, and that each of these was a large ohlong bailding, capablaof containing 20 or 30 families, the domestic arrangements of which were regulated by a war chiei, acknowledged as the head of that particular subordinate band.

Many ohjections to the tatl imposed on him hy this proporition ware
interposed by the chief, the principal of which were, the great disparity of age and the utter futility of any further attempt, upon the affections of one so obdurate of heart. The first was obviated by some well applied commendations of his person, and the second yielded to the suggestion that women were often capricious, were not always influenced by considerathons the most natural, or resolvable to reasons the most obvious.

The chief then painted and arrayed himself as for battle, bestowing some little additional adornment upon his person, to aid him in this species of warfare, with which he was not altogether so familiar as that in which he had acquired his reputation; his practice having been confined rather to the use of stone-headed arrows than love darts, and his dexterity in the management of hearts displayed rather in making bloody incisions, than tender impressions. Before he left the lodge, his retainers pledged themselves, that if the prosecution of this adventure should impose upon their chief the necessity of performing any feat, to render him better worthy the acceptance of Oon-yay-stee, they would aid him in its accomplishment, and sustain him against its consequences to the last extremity. It was reserved for so adventurous a spirit that it should be as successful in love, as it had hitherto been resistless in war.

After a courtship of a few days, he proposed himself and was conditionally accepted, but what the nature of this condition was, further than that it was indispensable, Oon-yay-stee refused to tell him, until he should have given her the strongest assurances that it should be complied with. After some hesitation and a consultation with the lovers who urged him to give the promise, he declared himself ready to accept the terms of the compact. Under her direction he then pledged the word of a warrior, that neither peril to person, nor sacrifice of affection should ever prevail with him to desist, imprecating the vengeance of Hau-men-dee-zhoo, and the persecution of Dairh-shoo-oo-roo-no upon his head if he failed to prosecute to the uttermost, the enterprise, if its accomplishment were only possible.
She told him to bring her the scalp of a Seneca chief whom she designated, who for some reason she chose not to reveal, was the object of her hatred.

The Wyandot saw too late, that he was committed. He besought her to reflect, that this man was his bosom friend, they had eaten and drank and grown up together-and how heavy it would make his heart to think that his friend had perished by his hand. He remonstrated with her on the cruelty of such a requisition, on the infamy of such an outrage of confidence and the execration which would forever pursue the author of an action so accursed. But his expostulations were made to deaf ears. She told him either to redeem his pledge, or consent to be proclaimed for a lying dog, whose promises were unworthy ever to be heard, and then left him.

An hour had hardly elapsed, before the infuriated Wyandot blackened hia face, entered the Seneca Village, tomahnwked and scalped his friend, and as he rushed out of the lodge shouted the scalp-whoop. In the darkness of tha night his person could not be distinguished, and he was challenged by a Seneca to whom he gave his name, purpose, and a definnce and then continued his flight. But before it hed terminated, the long mournful scalp-wboop of the Senecas was resounding through the Wyandot Village; and the chief had hardly joined in the furious conflict that ensued between the avengers of his murdered victim and his own retainers, before he paid with his life the forfeit of his treachery.

After a deadly and sustained combat for three days and nights, with alternale success, the Wyandots were compelled to retire, deserting their village and abandoning their familiea to such mercy as might be granted by an infuriated enemy. Those who were left, sunk under the tomahawk and sealping knife-the village was devastated-and the miserable author of the bloody tragedy herself perished anid this scene of indiscriminate alaughter and desolation.

This war is said to have continued for a period of more than 30 years, in which time, the Wyandots had been forced backwards as far as Lakes Huron and Michigan. Here they made an obstinate stand, from which all the efforts of their relendess enomies to dislodge them were ineffectual Their inveterate hatred of each other was fastered by the war parties of the respective tribea, whose vindictive feelings led them to hunt and destroy each other, like so many beasts of the forest. These resulted generally in favor of the Wyandots, who, inspirited by these partial successes. prepared for more active operations. Three encounters took place, on the eame day, two being had on Lake Michigan and one on Lake Erie, and which from their savage and exterminating character, closed this long and merciles contest It is somewhat remarkable, as no other tradition makes mention of an Indian battle upon water, that one of these, said to have oceurred on Lake Erie, between Long Point and Fort Talbot, was fought in canoes. Of this the following detail is given.

A large body of Wyandote accompanied by two Orenwes left Lake Huron in birch canoes, on a war excursion into the country of the Senecas, who had senled at this time, near the head of the Ningara river. They put ashore al Long Point to cook, when ono of the Ounwas and a Wyan. dot were sent out as spies to reconnoitre. They had proceeded but a sbort distance from the camp, when they met two Senecas, who had been despatched by their party for the like purposes, and from whom they instantly fled. The Otawa finding his pursuers gaining upon him, hid himself in the branches of a spruce tree, where he remained till the Seneca had passed. The Wyandot, fleeter of foot, succeeded in reaching his camp and gave the alarm, when the whole body embariced and pushed out into the lake. In another moment a party of senecas was discovered, turning
the nearest point of land in wooden canoes. Immediately the war-whoops were sounded and the hostile bands began to chant their respective songs. As they slowly approached each other, the Wyandots struck a fire, and prepared their gum and bark to repair any damage which might occur to the canoes. The battle was fought with bows and arrows, and after a furious and obstinate contest of some hours, in which the carnage was dreadful, and the canoes were beginning to fill with blood, water and mangled bodies, the Senecas began to give way. The encouraged $W$ yandots fought with redoubled ardor, driving the Senecas to the shore, where the conflict was renewed with unabated fury. The $W$ yandots were victorious, and few of the surviving Senecas escaped to tell the story of their defeat. One of the prisoners, a boy, was spared and adopted by the nation. Two Wyandots are now living who profess to have seen him, when very far advanced in years.

The two other attacks to which allusion has been made, as occurring on the borders of Lake Michigan, were not more fortunate in their issue. The Senecas were repulsed with great slaughter.

Thus, say the Wyandots, originated this long, bloody and disastrous war, and thus it terminated after proving nearly the ruin of our nation.

## EARLY SKETCHES OF INDIAN WOMEN.

Thes oldest books we poseess written by the first observers of our $\mathbf{l n}$ dians abound in interest. Among these is a small work by William Wood, who visited Plymouth and Massachusetts soon after their settlement, and published his "New England's Prospect," in London, in 1634.

The following extract from this book, (now very scarce,) we make here, partly for the purpose which the author declares he had in view in writing it, viz.: to excite the special interest of our female readers, though the good Humour and wit, as well as the benevolence of the writer, will doubless commend it to persons of both sexes. That we may not run the risk of losing any of the effect of the quaint, old-fashioned style of the original, we have been careful to preserve the author's orthography and punctuation, together with the long sentences, for which, as well as many of his contemporaries, he was remarkable. We have omitted short and unimportant passages in a few places, marked with asterisks. $\boldsymbol{E}$.

# Froms "New Englard Proapear." <br> CHAPTER XIX 

 APFARELL, AND MODEETY.

To eatisfie the curious eye of women-readers, who otherwise might thinke thair eas forgotten, or not worthy a record, let them peruse theas few lides, wherein they may see their owne happinesse, if weighed in the womans ballance of these ruder Iadiens, who scorne the tuterings of thair wives, or $t 0$ admit them as their equals, though their qualitios and industrious deservings may justly claime the prebeminence, and command better usage and more conjugall esteeme, their persons and features being every way correspondent, their qualifications more excellent, being more loving, pittifull, and modest, milde, provident, and laborious than their laxie huabands. Their employments be many: First their building of bouses, whose frames are formed like our garden-arbours, something more round, very strong and handsome, covered with close-wrought mals of their owne weaving, which deny entrance to any drop of raine, though it come boch fierce and long, neither can the piercing North winde, finde a cranaie, through whick he can conveigh his cooling breath, they be warmer than our English houses; at the top is a square hole for the emoakes evacuation, which in rainy weather is covered with a pluver. these bee such amoakie dwellings, that when there is good fires, they are not able to stand upright, hut lie all along under the smoake, never using any stooles or chaires, it being as rare to see an Indian sit on a stoole at home, as it is strange to see an English man sit on his heels abroad. Their houses are smaller in the Summer, when their families be dispersed, by reason of hente and occasions. In Winter they make some fiftie or thereescore foote long, fortie or fiftie men being inmates under one roofe; and as is their husbands occasion these poore tectonists are often troubled like anailes, to carrie their houses on their backs sometimes to fishingplaces, cther times to hunting places, after that to a planting-plece, where it abides the longest : an other work is their planting of corne, wherein they exceede our English husband-men, keeping it so cleare with their Clamme shell-hooes, as if it were a garden rather than a corne-field, not suffering a choaking weede to adpance his audacious head above their infant corne, or an undermining worme to spoile his spurnes. Their corne being ripe, they gather it, and drying it hard in the Sunne, conveigh it to their barnes, which be great holes digged in the ground in forme of a hrasse pol, seeled with rinds of trees, wherein they put their corne, covering it from the inquisitive search of their gurmandizing husbands, who would eate up both their allowed portion, and reserved seede, if they knew where to finde ik. But our hogges having found a way to urr hindge their barne doores, and robbe their garnere, they are glad to im
plore their husbands helpe to roule the bodies of trees over their holes, to prevent those pioners, whose theeverie they as much hate as their flesh. An other of their employments is their Summer processions to get Lobsters for their husbands, wherewith they baite their hookes when they goe a fishing for Basse or Codfish. This is an every dayes walke, be the weather cold or hot, the waters rough or calme, they must dive sometimes over head and eares for a Lobster, which often shakes them by their hands with a churlish nippe, and bids them adiew. The tide being spent, they trudge home two or three miles, with a hundred weight of Lobsters at their backs, and if none, a hundred scoules meete them at home, and a hungry belly for two days after. Their husbands having caught any fish, they bring it in their boates as farre as they can by water, and there leave it; as it was their care to catch it, so it must be their wives paines to fetch it home, or fast: which done, they must dresse it and cooke it, dish it, and present it, see it eaten over their shoulders ; and their loggerships having filled their paunches, their sweete lullabies scramble for their scrappes. In the Summer these Indian women when Lobsters be in their plenty and prime, they drie them to keepe for Winter, erecting scaffolds in the hot sun-shine, making fires likewise underneath them, by whose smoake the flies are expelled, till the substance remains hard and drie. In this manner they drie Basse and other fishes without salt, cutting them very thinne to dry suddainely, before the flies spoile them, or the raine moist them, having a speciall care to hang them in their smoakie houses, in the night and dankish weather.

In Summer they gather flagges, of which they make Matts for houses, and Hempe and rushes, with dying stuffe of which they make curious baskets with intermixed colours and portractures of antique Imagerie: these baskets be of all sizes from a quart to a quarter, in which they carry their luggage. In winter time they are their husbunds Caterers, trudging, to the Clamm bankes for their belly timber, and their Porters to lugge home their Venison which their lazinesse exposes to the Woolves till they impose it upon their wives shoulders. They likewise sew their husbands shooes, and weave coates of Turkie feathers, besides all their ordinary houschold drudgerie which daily lies upon them.
[Of the treatment of babes the writer says]: The young Infant being greased and sooted, wrapt in a beaver skin, bound to his good behaviour with his feete upon a board two foote long and one foote broade, his face exposed to all nipping weather ; this little Pappouse travells about with his bare footed mother to paddle in the ice Clammbanks after three or foure dayes of age have sealed his passeboard and his mothers recoverie. For their carriage it is very civill, smiles being the greatest grace of their mirth; their musick is lullabies to quiet their children, who generally are as quiet as if they had neither spleene or lungs. To hear one of these Indians unseene, a
good eare might ensily mistake their untaught voyce for the warbling of a well tuned instrament Such command have they of their voices

Commendable is their milde carriage end obedience to their husbands, notwithstanding all this their customarie chutlishnesse and salvage inhumanitie, not seeming to delight in frownes or offering to word it with their lords, not presuming to proclaime their female superiority to the usurping of the least tull of their husbands charter, hut rest themselves content under their helplesse condition, counting it the womans portion: since the English arrivall comparison hath made them misemhle, for seeing the kind usage of the English to their wives, they doe as much condemne their husbands for unkindnesse, and commend the English for their love. As their huskands commending themselves for their wit in keeping their wives industrious, doe condemne the Englist for their folly in spoyling good working creatures. These women resort ofien to the English houses, where pares cum paribus congregata* in Sex I meane, they do somewhat ease their miserie by complaining and seldome part without a releefe: If her husband corne to seeke for his Squaw and beginne to bluster, the English woman betakes her to her armes which are the warlike Ladle, and the scalding liquors, threatening hlistering to the naked runnaway, who is soon expelled by such liquid comminations. In a word wo conclude this womans historie, their love to the English hath deserved no small esteerne, ever presenting them some thing that is either rare or desired, as Strawberries, Hurleberries, Rasberries, Gooseberries, Cherries, Plummes, Fish, and other such gifts as their poore treasury yeelda them. But now it may be, that this relation of the churlish and inhumane behaviour of these ruder Indians towards their patient wives, may confirme some in the beliefe of an aspersion, which I have often heard men cast upon the English there, as if they should learne of the Indians to use their wives in the like manner, and to bring them to the same subjection, as to sit on the lower hand, and to carrie water and the like drudgerie: but if my own experience may out ballance an ill-grounded scandalous runour, I doe assure you, upon my credit and reputation, that there is no such matter, hut the women finde there as much love, respect, and ease, as here in old England. I will not deny, but that some poore people may carrie their owne water, and doe not the poorer sort in England doe the same; witnesse your London Tankard-bearers, and your countrie-cotlagers? But this may well be knowne to be nothing, but the rancorous venome of some that beare nn good will to the plantation. For what neede they carrie water, seeing every one hath a Spring at his doore, or the Sea hy his house? Thus much for the satisfaction of women, touching this entrenchment upon their prerogative, as also concerning the relation of these Indians Squawes.

[^8]
## CHANT TO THE FIRE-FLY.

In the hot summer evenings, the children of the Chippewa Algonquine, along the shores of the upper lakes, and in the northern latitudes, frequently assemhle before their parents' lodges, and amuse themsclves by litle chants of various kinds, with shouts and wild dancing. Auracted by such shouts of merriment and gambols, I walked out one evening, to a green lawn skirting the edge of the St Mary's river, with the fall in full view, to get hold of the meaning of some of these chants. The air and the plain were literblly sparkling with the phosphorescent light of the Gre-fly. By dint of attention, repeated on one or two occasions, the following succession of words was caught They were addressed to this insect :

```
Wau wau lay see!
Wau wau tay see!
E mow e shín
Tshe bwau ne baune wee!
Be eghaun-be eghaun-eweel
Wa Wau tay see!
We wau tay see I
Was ara koon ain jegun
Was as koon ain je gun.
```

## LJTERAL TRANSLATION.

Flitting-white-fire-insect! waving-white-fire-bug ! give me light before I go to bed ' give me light before I go to sleep. Come, little dancing ${ }^{*}$. white-fire-bug ! Come litle fitting white-fire-beast! Light me with your bright white-firme-inatrument-your little candle $\dagger$.

Metre there was none, at least, of a regular character : they were the wild improvisations of children in a merry mood.

[^9]
## INDIAN ARROW HEADS, \&c.

By far the most numerous relics of the Red Race, now found in those parts of our country from which it has disappeared, are the small stoner with which they headed their arrows. Being made of the most durable cubstances, they have generally remained in the soil, unaffected by time and the changes of season. They most abound in those rich meadows which border some of orr rivers, and in other spots of peculiar fertility, though of less extent, where the pasture, or other attractions, collected game for the Red men. Tho stones most commonly used were quartz and flint, whieh were preferred on account of the facility of shaping them, the keenness of the points and edges, which they rendily present under the blows of a skilful manufacturer, as well as their superior hardness and imperishable nature. Multitudes of specimens still exim, which show the various forms and sizes to which the Red men reduced stones of these kinds: and they excite our admiration, by their perfect state of preservation, as welt by the skilfulaess of their manufacture.

Other stones, however, were not unfrequently used : and a collection which we have been making for many years, presents a considerable variety of materials, as well as of sizes, shapes and colors. Hard sandstone, trap or grancke, jasper and chalcedony, appear occasionaliy; some almost transparent. One of the larger size is made of steatite, and smooth, as if cut or acraped with a knife, contrary to the common method, of gradually chipping off amall fragments of more brittle stone, by light blows often repeated. These arrow beade were fastened to the shaft, by jnserting the butt into the split end, and tying round it a string of deer's sinews. A groove or depression is commonly observable in the stone, designed to receive the string. But it is sometimes difficult to imagine how the fastening was effected, as some perfect arrow-heads show no such depressions, and their forms are not well adapted to such a purpose. Thin peculiarity, however, is most frequently to be observed in specimens of mall size, the larger, and espocially such as are commonly supposed to have been the heads of spears, being usually well shaped for tying.

It is remarkable that some spots have been found, where such relics were surprizingly numerous. In Hartiord, Connecticut, about thinty years ago, many were picked up in a garden, at the comer of Front and Mill streets. The spot was indeed on the bank of the Little River, prohably at the head of Indian Canoe navigation: but yet no rational conjecture could be formed, to account for the discovery, except one. It was concloded that the place was an ancient hurying ground. Many bits of coarse earthen-ware were found, such as are common in many parts of the country. About two miles below Middletown, Connecticut, on the slope of a
hill on the southern side of the Narrows, we discovered, some years since, a great number of small fragments of white quartz, scattered thickly over the surface of the ground, perhaps for half an acre. Among them were several arrow heads of various forms, most of them imperfect, and many pieces of stone, which at first sight resembled them, but, on closer inspection, seemed to have been designed for arrow heads, but spoiled in the making. Some had one good edge, or a point or barb, while the other parts of the same stones showed only the natural form and fracture. In many instances, it was easy to see that the workman might well have been discouraged from proceeding any farther, by a flaw, a break or the nature of the stone. Our conclusion was, that the spot had long been a place where Indian arrow heads were made, and that we saw around us the refuse fragments rejected by the workmen. Other spots have been heard of resembling this.

If such relics were found nowhere else but in our own country, they would be curious, and worthy of preservation and attention: but it is an interesting fact, not however generally known, that they exist in many other parts of the world. Stone arrow and spear hends have been found in England for hundreds of years, and are believed to have been made and used by the Britons, who, in respect to civilization, were nearly on a level with our Indians. These relics are called by the common people Celts, from the race whose memory they recal ; and particular accounts of them are given, with drawings, in several antiquarian works. They bear a striking resemblance to our Indian arrow heads; and many of them could be hardly, if at all, distinguished from those of America.

African arrows have been brought to this country, in which the points were of the same forms and materials, and fastened in the same manner. About twelve years ago a vessel from Stonington was attacked by a party of Patagonians, who threw arrows on board. One of these which we procured, was pointed with a head of milky quartz, exactly corresponding with specimens picked up in New England.
Among the relics found in excavating the low mounds on the plain of Marathon, as we were informed by one of our countrymen, who was at Athens some years ago, there were spear heads made of flint, which, he declared, were like those he had often seen ploughed up in his native fields. These, it was conjectured, might have been among the weapons of some of the rude Scythians in the Persian army, which met its defeat on that celebrated battle ground.
A negro, from an obscure group of islands, just north of New Guinea, in describing the weapons in use among his countrymen, drew the forms of spear heads, which he said were often made of stones; and, when shown specimens from our collection, declared that they were very much like them.

It has been thought, that certain instruments would naturally be inven
ted by men in particular states of society and under certain circumstances, as the result of their wants and the means at hand to supply them. It is not, however, always easy to reconcile this doctrine with facts. For example, the black race of the islands north of New Holland, (of which so little is yet known,) appear to require the use of the bow as much as any other savage people, yet they are entirely ignorant of it, though it has been thought one of the simple, most natural and most indispensable instruments in such a condition of society.

We are therefore left in doubt, in the .present state of our knowledge, whether the manufacture and use of stone arrow heads have been so extensively diffused over the globe by repeated inventions, or by an intercourse between portions of the human race long since ceased, or by both causes. To whichever of these opinions we may incline, the subject must still appear to us worthy of investigation, as the history of these relics must necessarily be closely connected with that of different families and races of men in every continent and in every zone.

We would invite particular attention to the position and circumstances of Indian remains which may hereafter be found ; and would express a wish that they might be recorded and made known. Our newspapers offer a most favorable vehicle for the communication of such discoveries and observations, and our editors generally must have taste and judgment enough to give room for them.

It was remarked in some of our publications a few years ago, that no unequivocal remains of the Red men had yet been discovered in the earth, below the most recent strata of soil, excepting cases in which they had been buried in graves, \&c. Perhaps later observations may furnish evidence of the longer presence of that race on our continent than such a statement countenances.

One of the most interesting objects of enquiry, with some antiquaries, is whether there are any ancient indications of Alphabetical writing in our continent. A small stone found in the Grave-Creek Mound, and others of a more doubtful character, are quite sufficient to awaken interest and stimulate enquiry.

A few specimens of rude sculpture and drawing have been found in different parts of the U. States; and shells, ornaments, \&c., evidently brought from great distances. There may be others, known to individuals, of which antiquaries are not aware. After perusing the foregoing pages, it will be easy to realize that all such remains may be worthy of attention. Not only copies should be made and dimensions taken, but descriptions should be written, local information and traditions collected, measures taken to preserve the originals, and some notice given which may reach persons interested in such subjects.- $\boldsymbol{E}$.

## PLAN AND OBJECTS OF INQUIRY.

Circumatances favour the continuance of this work. It will be issued in parts, or numbers, of which the present series will embrace eight, making a volume of 512 pages.

The topica discuased, will comprise, as a basis, the following :-
 ndian tekritoties.

II talles of a wowal collected from indiak traditions
If Mankers, costome akd apinions.
IV. ELEETCHES OF THE LIVES OF NOTED RED MEN AND WOMEN, WRID HAVE APPEARED aN THE WRETERR continknt.
 TRADITIONS.
v. Largdages

VII ETHNOLOGY.
vil. FICTURE WEITNO.
I. ARTIQUITIES

I Bongs, yuHid and poetry, ETC.
Papers and extracts respecting some of these sabjects will be given in each number. The order of their insertion, and the time of the issaes, are left to depend upon convenience. It can only be added that it is the design to make the periods of recurrence short, and that arrangements are made to complete the series with the utmost dispetch.

## PERSONAL REMINISCENCES.

## [Continted mom malt L]

It is Dr. Johnson, I think, who eays, that we take slight oceasions to be pleased. At least, I found it so, on the present oceasion; the day of my arrival was my bith day, and it required but little stretch of imagination to convert the scene upon which I had now entered, into a new world. It was new to me.-I was now fairly in the great geological valley of the west, the object of so many anticipations.

The ark, in which I had descended the Allegany, put ashore near the point of land, which is formed by the junction of the Monongahela with this fine clear stream. The dark and slowly moving waters of the one, contrasted atrongly with the sparkling velocity of the other. I felt a booyancy of spiris as I leapt ashore, and picked up some of its clean pebbles to see what kind of geological testimony they bore to the acrana character of their parent beds in the Apalachian range.
"What shall I pay you, for my passage, from Olean," said I, to the gentleman with whom I had descended, and at whose ark-table I had found a ready sent with his family. "Nothing, my dear sir," he replied with a prompt and friendly air,--"Your cheerful aid in the way, taking the oars whenever the case required it, has more then compensated for any claims on that score, and I only regret that you are not going further with us."

Committing my baggage to a carman, I ascended the bank of diluvial earth and pebbles with all eagerness, and walked to the point of land where Fort Pitt (old Fort Du Quesne) had stood. It is near this point that the Allegbany and Monongahela unite, and give hith to the noble Ohio. It is something to stand at the head of such a stream. The charm of novelty is beyond all others. I could realize, in thought, as I stood here, gazing on the magrificent prospect of mingling waters, and their prominent and varied shores, the idea, which is said to be embodied in the old Mingo substantive-xelamation of O-heo 1 a term, be it remernbered, which the early French interpretera at once rendered, and truly, it is believed, by the name of La Belle Rivizre.

Eo frr, I suid to mysalf, sll is well, -1 am now west of the great spinal chaid. All that I know of America in now fairly easd of mobright streams, warm hearts and oll I have fairly cast myself loono
on the wide waters of the wect. I bave already come as many handred miles, as there are days in the week, but I begin my travela here I have, as it were, taken my life in my hand. Father and mother, I may never see more. God wot the result. I go to seek and fulfil an unknown deatiny. Come weal or woe, I shall abide the result All the streams ran south, and I have laid in, with "time and chance" for a journey with them. I am but as a chip on their surface-nothing morel Whether my bones are to rest in this great valley, or west of the Cordilleras, of the Rocky Mountains, I know not I shall oftien think of the silver Iosco, the farther I go from it To use a native meraphor, My foor is on the pach, and the word, is onward! "The spider taketh hold with her hands," Solomon says, "and is in king's palaces." Traly, a man should accomplish, by diligence, as much as a spider.

Pitsburgh wis, even then, a busy manufacturing town, filled with working machinery, steam engines, hammers, furnacea, and coal smoke. I visited Mr. O'Hara, and aeveral other leading manufacturera They made glass, bar iron, nuils, coarse pottery, castings, and many oher articles, which filled its shops and warehouses, and gave it a city-like appearance. Every chimney and pipe, perpendicular or lateral, paffed out soory coal smoke, and it required some derterity to keep a clean collar half a day. I met ladies who bore this impress of the city, on their moroing wilet I took lodgings at Mrs. McCullough's, a respectable hotel on Wood atreet, and visited the various manufactories, for which the piace was then, and is now celebrated. In these visita, I collected accurate data of the cart of raw material, the place where obeained, the expense of manulacture, and the price of the finished fahric. I bad thus a body of facts, which enahled me, at least to converse understandingly on these topics, to give my friends in the east, suitahle data, and to compare the advantages of manurfacturing here with those possessed by the eastera and middle stales. Every thing was, in the busidess prospects of the west, however, at a comparatively low ehb. The proserating effects of the war, and of the peace, were alike felt We had conquered England, in a second contest, but were well exhauted with the effort The country had not recovered from the sacrifices and lowes of a series of military operationa, which fell moat hearily on its western population. Its agricultural industry had been crippled. Ite financial affairs were deranged. Ites local banks ware broken; it manufactories were aboolutely ruined. There was little confidence in husineas, and never was credit, public and private, at a lower ebb. These was however, one thing, in which the weet held oot a sbining prospect It had abundance of the finest lands in the world, and in fact, is promised a happy home to the agricultaral industry of half the world It was literally the land of promise, to the reat of the onion, if not to Europe.

Having meen whataver I wahed in Pituburgh, I hired a hone and
crossing the Monongahela, went up it southern banks, as high as Williamsport I found the country people were in the habit of calling the city "Pitt" or "For Pitt"" a term dating back doubless to the time of the surrender, or rather taking possession of Fort Du Quesne, by Gen. Forbea. Mineral coal (bituminous) characterizes the entire region, as far as my excurtion reached. By a happy coincidence in its geological structure, iron orse are contained in the series of the coai deposits. On returning from this trip, night set in, very dark: on the evening I approached the summit of the velley of the Monongabelh, called Coal Hill. The long and winding road down this steep was one mase of moving mud, only varied in its consistence, by sloughs, sufficient to mire both man and horse. I was compelled to let the animal choose his own path, and could only give him aid, when the flashes of lightning lit up the scene with a momentary brilliance, which, however, had often no other effect but to remind me of my danger. He brought me, at leagh, safely to the brink of the river, and across the ferry.

To be at the head of the Ohio river, and in the great manufactaring city of the West, was an exciong thought, in itself. I had regarded Pitsburgh as the alpha, in my route, and after I had made myself familiar with its characteristica, and finding nothing to invite my furber attention, I prepared to go onward. For this purpose, I went down to the banke of the Monongabela, one day, where the arks of that stream usually louch, to look for a passage. I met on the beach, a young man from Maseachusetts, a Mr. Brigham,-who had come on the same errand, and being pleased with each other, we engaged a passage together, and geting our baggage aboerd irmediately, eet off the same evening. To foat in an ark, down one of the loveliest rivers in the world, was, at least a novelty, and as all novelty gives pleasure, we went on charmingly. There were some sen or a dozen passengers, including two married couples. We promenaded the decks, and ocanned the ever changing scenery, at every bend, with unalloyed delight. At night we lay down across the boas, with our feet towards the fire-place, in a line, with very little diminution of the wardrobe we carried by dey,-the married folles, tike light infantry in an army, occupying the flanks of our nocturnal array. The only objection I found to the night's rest, arose from the obligation, each one was bacily under, to repair on deck, at the hollow nightery of "oars!" from the ateersman. This was a cry which was seldom uttered, however, except when we were in danger of being shoved, by the carrent, on the head of some island, or against some frowning "snag," so that we had a mutual interest in being punctual at this cry. By it, aleep was to be enjoyed only in sections, sometimes provokingly short, and our dreams of golden valties, studded with pearls and gems, were oddly jumbled with the actual preseace of plain matter of fact things, such as running across a tier of "old monongahela" or geating one's fingers
trod on, in ecrambling on deck. We took our meals on our lape, siting around on boxes and berrele, and made amenda for the want of style or elegance, by cordial grod feeling and a practical exhibition of the best principles of "association." There was another pleasing peculiarity in this mode of floating. Two or more arks were frequently lashed together, by order of their commanders, whereby our conversational circle was increased, and it was not a rare circumstance to find boh singers and musicians, in the moving communities for "the west," so that thoes who were inclined to, might literally dance as they went This wes certainly a social mode of conquering the wilderness, and gives some idea of the bouyancy of Anerican character. How different from the tensations felt, in floating down the same stream, by the same means, in the era of Boon, -the gloomy era of 1777, when instead of violin, or flageolet, the crack of the Indian rifle wes the orly sound to be anticipated at every new bead of the channel.

Off Wheeling the commander of our ark made fast to a larger one from the Monongabela, which, among otber acquaintances it brought, introduced me to the late Dr. Sellman of Cincinnati, who had been a sargeon in Wayne's army. This opened a vista of reminiscences, which were wholly new to me, and served to impart historical interest to the scene. Some dozen miles below this town, we landed at the Grave Creek Fiats. for the purpose of looking at the large mound, at that place. Idid not then know that it was the largese artificial structure of this kind in the western country. It was covered with forest trees of the native growth, some of which were several feet in diameter, and it had indeed, essentially the same look and character, which I found it to present, twentyGive yeara afterwarde, when I made a special visit to this remarkable mansoleum to verify the character of some of its antiquarian contenta On ascending the flat summit of the moand, I found a cbarming prospect around. The sumanit was just 50 feat across. There was a cup-shaped concavity, in its ceatre, exciting the idea that there had been some internal sub-structure which had given way, and caused the earth to cave in, This idea, after haring been entertained for more than half a century, was finally verified in 1838, when Mr. Abelard Tomlinson, a grandson of the first proprietor, caused it to be opened. They discovered two remarkahle vaults, built partly of stone, and partly of logs, as was judged from the impressions in the earth. They were situated about seventeen feat apart, one above the aher. Both contained bonea, the remains of buman skeletons, along with copper braceleta, plates of mica, sea shelis, heads of wrought conch, called "ivory" by the multitude, and some other relices, moet of which were annogous to artieles of the same kind occurring in other ancient mounds in the west The occasion would not indeed have jusified the high expectations which had been formed, had it not been for the diseovery, in one of the vaults, of a amall fat stone of an oval form,
containing an inscription in ancient characters. This inscription, which promisea to throw new light on the early history of America, has not been decyphered. Copies of it have been sent abroad. It is thought, hy the learned at Copenhagen, to be Celtiberic. It is not, in their view, Runic. It has, apparenty, but one hieroglyphic, or symbolic figure.

A good deal of historical interest clusters about this discovery of the inscribed stone. Tomlinson, the grandfather, settled on these fials in 1772, two years before the murder of Logan's family. Large trees, as large as any in the forest, then covered the flata and the mound. Thare stood in the depression I have mentioned, in the top of the mound, a large beoch tree, which had been risited earlier, as was shewn by several names and dates cut on the bark Among these, there was one of the date of A. D. 1734. This I have seen stated under Mr. Tomlinson's own band. The place continued to be much visited from 1770 to 1790, as was shewn by newer names and dates, and indeed, continues to be so still. There was standing at the lime of my first visit in 1818, on the very summil of the mound, a large dead or decayed white oak, which was cut down, it appears, about ten years afterwards. On counting its cortical layers, it was ascertained to be about 500 years old. This would denote the desertion of the mound to have happened about the commencement of the 13 th century. Granting to this, what appears quite clear, that the inscription is of Earopean origin, have we not evidence, in this fach of the contineats having been visited prior to the era of Columbus $?$ Visited by whom? By a people, or individuals, it may be said, who had the use of an antique alphabet, which was much employed, (although corrupted, varied and complicated by its spread) among the native prieathood of the western shores and islands of the European continent, prior to the introduction of the Roman alphabet.

The next object of antiquarian interest, in my descent, was at Gallipolis -the site of an original French setlement on tbe west bank, which is connected with a slory of much intereest, in the history of western migrations. It is an elevated and eligible plain, which had before been the site of an Iodian, or aboriginal equllement Some of the articles found in a mound, such as plates of mica and sea shells, and beads of the wrought coach, indicated the same remote period for this nucient sexlement, as the one at Grave Creek Flats; but I never heard of any imscribed articles, or monuments bearing alphabetic characters.

All orher interest, then knowa, on this subject, yielded to that which was felt in witoesing the antique worka at Marietta. Like many others who had preceded me and many who have followed me, in my visit, I felt while walling over thete semi-military ruins, a strong wish to know, who had erected works so different from those of the present race of Indians, sad during what phasia of the early history of the continent? A covered way had, evidently, been constructed, from the margin of
the Muskingum to the elevated equare, evincing more than the ordinary degree of military skill exercised by the Weatern Indians. Yet these works revealed one trait, which assimilates them, in character, with ochers, of kindred stamp, in the west I allude to the defence of the open gate-way, by a minor mound ; clearly denoting that the passage was oo be disputed by men, fighting hand $w$ hand, wiono merely sought an adrantage in exercizing manual strength, by elevation of pooition. The Marieta tumuli also, agtee in style with others in the Ohio valley.

A leaden plate was found near this place, a few years after this visit, of which an account was given by Gov. Clinton, in a letter to the American Antiquarinn Society, in 1827, but the inseription upon ih, which was in Latin, but mutilated, proved that it related to the period of the French supremacy in the Canadas. It appeared to have been originally depoeited at the mouth of the river Venango, A. D. 1749, during the reign of Lonis XV.

While at Marietta, our flotilla was increased by another ark from the Muakingum, which brought to my acquaintance the Hon. Jesse B. Thomas, of lllinois, to whose civilites I was afterwards indebted, on several occasions Thus reinforced, we proceeded on, delighted with the scenery of overy new tura in the river, and augmenting our citcle of fellow trapellars, and table acquaintance, if that can be called a table acquaintance which assembles around a rustic board. One night an accident befel us, which threatened the entire loss of one of our flotilla. It so happened, at the spor of our landing, that the smaller ark, being outside, was preseed by the larger ones, so far ashore, as $w$ tilt the oppasite side into the strearn below the caulked seam. It would have sunk, in a few minutes, but was held up, partly by its fastening $w$ the other boats. To add to the interest felt, it was filled with valuable machinery. A congress of the whole travelling community assembled on shore, some pitching pebblestones, and some taking a deeper interest in the fate of the boat. One or two unsuccessful efforts had been made $\omega$ bail it out, but the water flowed in faster than it coald be removed. To cat loose the rope and abandon it, seemed all that remained. "I feel salisfied," said I, "to my Massachusetrs friend, that two men, bailing with might and main, can throw out more water, in a given time, than is let in by those scams; and if you will step in wih me, we will test it by trying again." With a full assent and rcady good will he met this proposition. We pulled off our coats, and each taking a pail, stepped in the water, then halfleg deep in the ark, and began to bail away, with all force. By dint of determination we soon had the satisfaction to see the water line lower, and catching new spirit at this, we finally succeeded in sinking its level below the caulked seam The point was won. Others now stepped in to our relief. The ark and ins machinery were saved. This litle incident was one of those which served to produce pleasurable sensations, all round, and led por-
hape, to some civilities at a subsequent date, which were valuable to me. At any rate, Mr. Thomat, who owned the ark, was so well pleased, that he ordered a warm breakfast of toast, chickens, and coffee on shore for the whole party. This was a welcome subscitute for our ordinary breakfast of bacon and tea on board. Such litule incidents serve as new points of encouragement to travellers: the very shores of the river looked more delightful, after we put out, and went on our way that morning. So much has a satisfied appetite to do with the aspect of thinge, both without, as well as within doors.

The month of April had now fairly opened. The season was delightful. Every rural sound was joyful-overy sight novel, and a thousand circumstances united to make the voyage one of deep and unmired interest At this early season nothing in the vegetahle kingdom givea a more striking and pleasing character to the forest, than the frequent oceurrence of the celtis ohioensis, or Red Bud It presents a perfect bonquet of red, or rose-coloured petals, while there is not a leaf exfoliaded upon is branches, or in the entire forest

No incident, further threatening the well being of our party, occurred on the descent to Cincinnati, where we landed in safety. But long bafore we reached this city, its outliers, to ube a geological phrase, were encoantered, in long lines and refis of boards and pine timber, from the sources of the Alleghany, and arks and flat-boats, from all imaginable places, with all imaginable aames, north of its latitude. Next, steamboats lying along the gravel or clay banks, then a stearn-mill or two, puffing up its expended strength to the clouds, and fiaally, the dense mass of brick and wooden buildings, jutting down in rectangular streets-from high and exceedingly beautiful and commanding hills in the rear. All was soited to realize high expectations. Here was a city indeed, on the very spot from which St. Clair set out, on his ill-fated expedition in 1791, against the hostile Indians. Twenty-five yeara had served to cransform the wilderness into scenes of cultivaion and elegance, realizing, with no finint outlines, the gay creations of eastern fable

War, sloth, and intemperance, are the three great cursea which have fallen upon the Red Race of America. Many whole tribes have gone down and perisbed under their triple influence ; hut it is not woo late for those who remsin to reform and recover themselves.

The natives are more easily pleased than instructed. A hargh or nagracions method with them, is always unfapourable to good resulm That instrucion which comes from a mild voice and pleasing mannen, is fraught with power, even upon the rougheak arage.

# TALES OF A WIGWAM. 

WASBASHAS;

or,

## THE TRIBE THAT GREW OUT OF A BHELL.

AN OSAGELEGEND.

There was a snail living on the banks of the river Missouri, where ha foond plenty of food, and wanted nothing. But at leogth the watera be gan to rise and overflow its banks, and although the little animal clong to a log, the flood carried them both away: they floated along for many days. When the water fell, the poor snail was left in the mud and slime, on shore. The heat of the sun came out so strong, that he was soon fixed in the slime and could not stir. He could no longer get any nourighment. He became oppressed with heat and droughe He resigned him. self to his fote and prepared to die. But all at once, he felt a renewed rigour. His shell burst open, and he began to rise. His head gradually rose above the ground, he felt his lower extremities assuming the character of feet and legs. Arms extended from his sides. He felt their ortremities divide into fingers. In fine he rose, under the influence of one day's sun, into a tall and noble man. For a while he remained in a dall and stupid ssate. He had but little activity, and no clear thoughas These all came by degrees, and when his recollections returned, he romolved to travel back to his native land.
But he was naked and ignorant. The first want he felt was bunger. He saw beasts and birds, as he walked along, hut he knew not how to kill them. He wished himself again a snail, for he knew how, in thad form, to get his food. At leugth he became so weak, by walking and fasting, that be laid himelf down, on a grassy bank, to die. He had not laid long, when he heard a voice calling him hy name. "Was-bas-has," axclaimed the voice He looked up, and beheld the Graat Spirit sitting on a white horse. His ayes glistened like stars. The hair of his head ahone like the sun. He could not bear to look upon him. He trembled from head to foot. Again the voice spoke to him in a mild tone-- Was-bas-has! Why do you look terrified 7 " "I tremble," he replied, because 1 stand before Him who raised me from the ground. I am faint
and hungry,-I have eaten nothing since the floode left me upon the shore -a little shell."

The Great Spirit here lifted up his hands end displaying a bow and arrowe, told him to look at him. At a distance sat a bird on a tree. He put an arrow to the string, and pulling it with force, brought down the beautiful object. At this moment a dear came in sight. He placed another arrow to the string, and pierced it through and through. "These" said he, "are your food, and these are your arms," handing him the bow and arrows. He then instructed him how to remove the skin of the deer, and prepare it for a garment. "You are naked," said he, "and musa be clothed; it is now warm, but the skies will change, and hring rains, and snow, and cold winds." Having said this, he also imparted the giff of fire, and instructed him how to roast the fesh. He then placed a collar of wampum around his neck. "This," said he, "is your authority over all beass." Hoving done this, both horse and rider rose up, and vanished from his sight.

Wastas-has refreshed himself, and now pursued his way to his native land. Ho had seated himself on the banks of the river, and was meditating on what had passed, when a large beaver rose up from the channel and addressed him. "Who art thou;" said the heaver, "that comest here todisturb my ancient reign?" "I ame man," he replied; "I was once a shell, a creeping shell ; but who art thou?" "I em king of the nation of beasers," he answered: "I lead my people up and down this stream; we are a bury people, and the river is my dominion." "I must divide it with you," retorted Wasbas-has. "The Great Spirit has placed me at the head of beasts and hirds, fishes and fowl; and has provided me with the power of maintaining my rights." Here be held up the bow and arrows, and displayed the collar of shelle around bis neck. "Come, come," said the Beaver, modifying his tone, "I perceive weare brothers.-Walk with me to my lodge, and refreah yourself atter your journey," and so saying be led the way. The Snail-Man willingly obeyed his invitation, and had no reason to repent of his confidence. They soon entered a fine large village, and his host led him to the chief's lodge. It was a well-built room, of a coneshape, and the floor nicely covered with mats. As soon as they were sealed, the Beaver directed his wife and dsughter to prepare food for their guest While this was getting ready, the Beaver chief thought he would improve his opportunity by making a fast frjend of so superior a being; whom he saw, at the same time, to be but a novice. He informed him of the mechod they had of culuing down trees, with their teeth, and of felling them across streams, so as to dam up the water, and described the method of finishing their dams with leaves and clay. He also instructed him in the way of erecting lodges, and with other wise and seasonable conversation boguiled the time. His wife and daughter now entered, bringing in vessels of fresh peeled poplar, and willow, and sassa-
fras, and alder bark, which is the most choice food known to them. Of this, Was-bas-has made a merit of tnsting, while his entertainer devoured it with pleasure. He was pleased with the modest looks and deportment of the chief's daughter, and her cleanly and neat atire, and her assiduous atention to the comraands of her father. This was ripened into esteem by the visit he made ber. A mutual attachrment ensued. A union was proposed to the father, who was rejoiced to find so advantageous a match for his daugbter. A great feast was prepared, to which all the beavers, and other animals on good terms with them, were invited. The SnailMan and the Beaver-Mnid were thus united, and this union is the origin of the Osages. So it is said by the old people.

## THE BOY WHO SET A SNARE FOR THE SUN;

## an

## THR ORIGIN OP THE KUG-E-BEENG-WA-KWA, OR DORMOUSE.

## FROM THE OLIBWA ALGONQUN,

At the time when the animals reigned in the earth, they had killed all but a girl, and her little brocher, and these two were living in fear and seclasion. The boy was a perfect pigmy, and never grew beyond the stature of a truall infant ; but the girl increased with her years, so that the labor of providing food and lodging devolved wholly on her. She went ouf daily to get wood for their lodge-fire, and took her litule brother along that no sccident might happen to him; for he was too litlo to leave alona. A big bird might have flown away with him Sbe made him a bow and urows, and said to hira one day, "I will leave you behind where I have been chopping-you must hide yourself, and you will soon see the Clis-shee-gitshee-geun, ai bee-ug or snow birds, come and pick the worns out of the wood, where I have been chopping," (for it was in the winter.) "Sboot one of them and bring it home." He obeyed her, and tried his bent to kill one, but came home unsuccessful. She told him he must not despair, but try again the next day. She accordingly left him at the place she got mood, and returned. Towards nighufall, she heard his litte footsteps on the snow, and be came in exultingly, and threw down one of the birds, Which he had killed. "My sirter," caid he, "I wish you to skin it and aretch the skin, and when I havo killed more, I will have a coat made out of them" "But what shall we do with the body?" said she: for as yet men had not begun to eat animal food, but lived on vegetables alone. "Cut it in two," he answered, "and season our pothage with one half of it

- Blind Women
at a time." She did so. The boy, who was of a very bmall stature, continued his efforts, and succeeded in killing ten birds, out of the skins of which his sister made him a liule coat.
"Sister," said he one day, "are we all alone in the world? Is there nobody else living ${ }^{\text {"" }}$ She told him that those they feared and who had destroyed their relatives lived in a certain quarter, and that he must by no means go in that direction. This only served to inflame his curiosity and raise his ambition, and he soon after took his bow and arrows and went in that direction. After walking a long time and meeting nothing, he became tired, and lay down on a knoll, where the sun had melted the snow. He fell fast asleep; and while eleeping, the sun beat so hot upon him, that it singed and drew up his bird-akin coat, so that when he awoke and stretched himself, he felt bound in it, as it were. He looked down and saw the damage done to his coat. He flew into a passion and upbrided the sun, and vowed vengeance againet it. "Do not think you are wo bigh," said he, "I shall revenge ruyself."

On coming home he related his disaster to his sister, and lamented bitterly the spoiling of his coat. He would not eat. He lay down as one that fasts, and did not stir, or move his position for ten days, though she tried all she could to arouse him. At the end of ten days, he turned over, and then lay ten days on the other side. When he got up, he told his sister to make him a snare, for he meant to catch the sun. She said she had nothing; but finally recollected a little piece of dried deer's sinew, that her fatber had leff, which she soon made into a string suitable for a noose. Bot the moment she showed it to him, he told her it would not do, and bid her get something else. Sbe said she had nothing $\cdots$ nothing at all At last she thought of her hair, and pulling some of it out of her head, roade a grting. But he instantly said it would not answer, and hid her, pettishly, and with authority, make him a noose. Sbe told him there was nothing to make it of, and went out of the lodge. She said to herself, when she had got without the lodge, and while she pras all alone, "neow obewy indapin." This she did, and twisting them into a tiny cord she handed it to ber brother. The̊ moment he saw this curious braid he was delighted. "This will do," he said, and immediately put it to his mouth and began pulling it through his lips ; and as fast as he drew it changed it into a red metal cord, which he wound around his body and shoulders, till he had a large quantity. He then prepared himeelf, and set out a little after midnight, that he might catch the sun before it rose. He fixed his snare on a spor just where the sun would strike the land, as it rose above the earth's disc ; and sure enough, he caught the sun, so that it was held fast in the cord, and did not rise.

The animals who ruled the earth were immediately put into a great commotion. They had no light They called a council to debate upon the matter, and to appoint same one to go and eut the cord-for this

Was a very hatatdoas enterprize, as the rays of the sun would burn whoever came so near to them. At last the dormouse undertook it-for at thin time the dormouse was the largest animal in the world. When it stood up it looked like a mountain. When it got to the place where the sun was saared, jts back began to smoke and burn, with the intensity of the heat, and the top of ith carcass was reduced to enormous heaps of ashes. It succeeded, however, in cutting the cord with in teeth, and freeing the sun, but it was reduced to a very small size, and has remsined so crer since Men call it the Kugebeen-gwa-kwa

## AMPATA SAPA;

## 0n, <br> THE FIRST-WIFE

## A TRADITLON OF THE DACOTABS.

Ampata Sapa was the wife of a brave young hunter and warrior, by whom she had two children. They lived together in great happiness, which was only varied by the changes of a forest life. Sometimes they lived on the prairies; sometimes they built their wigwam in the forest, near the banks of a stream, and they paddled their canoe up and down the rivers. In these trips they got 6ish, when they were tired of wild meats In the summer season they kept on the open grounds; in the winter, they fixed their camp in a sbeltered position, in the woods. The very change of their camp was a source of pleasure, for they were always on the lookout for somexhing new. They had plenty, and they wanted nothing.

In this manner the frst years of their marriage passed away. But it so happened, that as years went try, the reputation of her busband in the tribe increased, and be soon came to be regarded as a Weelshahstshy Atapee, or chief. This opened a new feld for his ambition and pride The fame of a chief, it is well known, is often increased by the number of his wives His lodge was now thronged with visitora. Some came to consult him; tome to gain his favour. All this gave Ampata Sapa no uneasiness, for the Red People like to have vigitors, and to show hospitality. The first thing that caused a jar in her mind, was the rumour that her husband was about to take a new wife. This was like a poison in her veins; for she had a big heart She was much attached to ber busband, and she could not bear the idea of sharing bis affections with another. But she fonnd that the idea had already got strong hold of her busband's mind, and ber remoncrances did litte good. He defeaded himself on the ground, that it would give him greater influence in the triba if he took the daughter of a noted
ehief. But before he had time to bring her to his lodge, Ampata Bapa had fled frota it, taking her two childrea, and returned to her facher's Iodge. Her father lived at some distance, and here she remained a short time in quiet. The whole band soon moved up the Mississippi, to their hunting ground. She was gled to $\mathrm{g}^{\circ}$ with them, and would, indeed, have been glad to go any where, to get farther from the lodge of her faithless husband.

Here the winter wore away. When the Spring opened, they came back again to the banks of the river, and mended and fitted up the canoes, which thoy had left in the fall. In these they put their furs, and descended to the Falls of Et. Anthony. Ampata Sapa lingered behind a short time the moraing of their embarkation, as they began to draw near the rapidg which precede the great plunge. She then put her cance in the water, and erabarked with her children. As she appronched the falls, the increasing velocity of the current rendered the paddles of hut linle use. She rested with her's suspended in her hands, while she arose, and utdered her lament:
"It was him only that I loved, with the love of my heart. It was for him that I prepared, with joy, the fresh killed meat, and swept with bougha my lodge-fire. It was for him I dressed the skin of the noble deer, and worked, with my hands, the Moccasins that graced his feet.

I waited while the sun ran his daily course, for his return from the chase, and I rejoiced in my heart when I heard his manly footsteps approach the lodge. He threw down his burden at the door-it wan a haunch of the deer;-I flew to prepare the meat for his use.

My heart was bound up in him, and he was all the world to me. But ha has left me for another, and life is now a burden which I cannot bear. E'ven my children add to my griefs-they look so much like him. How can I support life, when all its moments are bitter 1 I have lified up my voice to the Master of life. I have asked him to take back that life, which he gave, and which I no longer wish. I am on the current that hastens to fulfil my prayer. I see the white foam of the water. It is my sbroud. I hear the deep murmur from below. It is my funeral song. Farewell

It was too late to arrest her course. She had approached too near the ahyss, before her purpose was discovered hy her friends. They beheld her enter the foam-they saw the cance for an instant, on the verge, and then disappear for ever. Such was the end of Ampata Sapa; and they say her canoe can sometimes be seen, hy moonlight, plunging over the falls.

Internal dissention has done more to destroy the Indian power in America, than the white man's sword. Could the tribes learn the wisdom of confederation, they might yet be saved. This is a prohlen now undergoing an imteresting process of solution.

# MUKAKEE MINDEMOEA; 

## 01,

THE TOAD-WOMAN.

## AN ODJIBWA TALE.

Great good luck once happened to a young woman whé was living all alone in the woods, with nobody near her but her litte dog, for, to her surprise, she found fresh meat every morning at her door. She felt very anxious to know who it was that supplied her, and watching one morning, very early, she saw a handsome young man deposit the meat. Afler his being seen by her, he became her husband, and she had a son by him. One day not long affer this, the man did not return at evening, as usual, from hunting. She waited ill late at night, but all in vain. Nert day she swung ber baby to sleep in its tikenágun, or cradle, and then said to her dog: "Take care of your brother whilat I am gone, and when he cries, halloo for me." The cradle was made of the finest wampum, and all its bendages and decorations were of the game costly material After a short cime the women beard the cry of her faithful dog, and running home as fast as she could, she found her child gone and the dog too. But on lookiog round, she saw piecea of the wampum of her child's cradle bit off by the dog, who strove to retsin the child and prevent his being carried off by an old woman called Mukakee Mindennoea, or the ToadWoman. The mother followed at full speed, and occasionally came to lodges inhabied by old women, who told her at what time the thief had passed; they also gave her shoes, that ghe might follow on. There were a number of these old women, who seemed as if they were all prophetesses. Each of them would say to her, that when she arrived in pursuit of her solen child at the next lodge, she must set the toes of the mocrasins they had loaned ber pointing homewards, and they would return of themselves. She would get others from her entertainers farther on, who would also give her directions how to proceed to recover her son. She thus followed in the pursuit, from valley to valley, and streara to stream, for months and yenrs; when she came, at length, to the lodge of the last of the friendly old Nocoes, or grandmothers, as they were called, who gave her final instruc. tions how to proceed. She told her she was near the place where her son was, and directed her to build a lodge of shingoob, or cedar boughs, near the old Toad-Woman's lodge, and to make a liule bark dish and squeeze her mill into it "Then," she said, "your first child (meaning the dog) will come and find you out" She did accordingly, and in a ahort time
she heard her son, now grown, going out to hund, with his dog, calling ont to him, "Monedo Pewauhik (that is, Steel or Spirit Iron,) Tweel Twee!" She then set ready the dish and filled it with her railk. The dog soon scented it and came into the lodge; she placed it before him. "See my child," said she, addressing him, "the food you used to have from me, your mother." The dog went and told his young master that he had found his real mother ; and informed him that the old woman, whom he called his mother, was not his mother, that ahe had stolen bim when an infant in his cradle, and that he had himself followed her in hopes of getting him back.. The young man and his dog then went on their hunting excursion, and brougbt back a great quantity of meat of all kinds. He said to bis pretended mother, as he laid it down, "Sead some to the stranger that has arrived lately." The old hag answered, "No! why should I send to her-the Sheegowish." He insisted; and ahe at last consented to take something, throwing it in at the door, with the remark, "My son gives you, or feeds you this." But it was of such en offensive nature, that she threw it immediately out after her.

After thas the young man paid the stranger a visit, at her lodge of cedar boughs, and partook of her dish of milk. She then told him she was his real mother, and that he had been stolen away from her by the detestahle Toad-Worpan, who was a witch. He was not quite convinced. She said to him, "Feign yourself sick, when you go home, and when the Toad-Wornan asks what ails you, say that you want to see your cradle; for your cradle was of wampum, and your faithful brother, the dog, bit a piece off to try and detaio you, which I picked up, as I followed in your track They were real wampam, white and blue, shining and beauiful" She then showed him the pieces. He went home and did as his real mother bid him. "Mother," said he, "why am I so different in my looks from the rest of your children?" "Oh," said she, "it was a very bright clear blue sky when you were born ; that is the reason." When the Toad-Woman saw he was ill, she astred what she could do for bin He said nothing would do him good, but the sight of his cradle. She ran immediately and got a cedar cradle; but he said "That is not my cradle" Ste went and got one of her own children's cradles, (for she had four,) but he turned his head and said, "That is not mine." She then produced the real cradle, and he saw it was the same, in substance, with the pieces the other had shown him; and he was convinced, for he could even see the marks of the dog's teeth upon it.

He soon got well, and went out hunting, and killed a fat bear. He and his dog-hrober then stripped a tall pine of all its branches, and stuck the carcass on the top, taking the usual sign of his having lilled an animalthe tongue. He told the Toad-Woman where he had left it, saying, "It is very far, even to the end of the earth." She answered, "It is not so far

[^10]but I can get it," so off she set. As soon as she was gone, the young man and his dog killed the Toad-Woman's children, and staked them on each side of the door, with a piece of fat in their mouths, and then went to his real mother and hastened her departure with them. The Toad-Woman spent a long time in finding the bear, and had much ado in climbing the tree to get down the carcass. As she got near home, she saw the children looking out, apparently, with the fat in their mouths, and was angry at them, saying, "Why do you destroy the pomatum of your brother." But her fury was great indeed, when she saw they were killed and impaled. She ran after the fugitives as fast as she could, and was near overtaking them, when the young man said, "We are pressed hard, but let this stay her progress," throwing his fire steel behind him, which caused the ToadWoman to slip and fall repeatedly. But still she pursued and gained on them, when he threw behind him his flint, which again retarded her, for it made her slip and stumble, so that her knees were bleeding; but she continued to follow on, and was gaining ground, when the young man said, "Let the Oshau shaw go min un (snake berry) spring up to detain her," and immediately these berries spread like scarlet all over the path for a long distance, which she could not avoid stooping down to pick and eat. Still she went on, and was again advancing on them, when the young man at last, said to the dog, "Brother, chew her into mummy, for she plagues us." So the dog, turning round, seized her and tore her to pieces, and they escaped.

Death is frightful, or welcome, according to the theories men have of it. To the Indian, it is a pleasing and welcome event. He believes a future state to be one of rewards, and restitutions, and not of punishments.

The Indian idea of paradise is the idea of the orientals. It consists of sensualities, not spiritualities. He expects the scene to furnish him ease and plenty. Ease and plenty make the Indian's happiness here, and his heaven is but a bright transcript of his earth.

Paganism and idolatry, require more mysteries for their support than Christianity. The Christian has but one God, existing in three hypostases. It would be below the truth to say that the Indian has one hundred thousand gods.

The Hindoos vorship their multiform gods of the earth, air and sea. The North American Indian only believes in them. He worships the Great Spirit.
Wild thoughts are often bright thoughts, but like the wild leaps of a mountain torrent, they are evanescent and unequal. We are dazzled by a single figure in an Indian speech, but it is too often like a spark amid a shower of ashes.

## MANNERS, CUST0MS, AND OPINIONS.

## CORN-PLANTING, AND ITS INCIDENTS.

Tee zea, mais, originally furnished the principal article of subsistence among all the tribes of this race, north and south. It laid at the foundation of the Mexican and Peruvian types of civilization, as well as the incipient gleamings of it, among tho more warlike tribes of the Iroquois, Natchez, Leaapees, and others, of northern latitudes. They esteem it so important and divine a grain, that their story-tellers invented various tales, in which this idea is symbolized under the form of a special gift from the Great Spirit. The Odjibwa-Algonquins, who call it Mon-dá-min, that is, the Spirit's grain or berry, have a pretty story of this kind, in which the stalk in full tassel, is represented as descending from the sky, under the guise of a handsome youth, in answer to the prayers of a young man at his fast of virility, or coming to manhood.

It is well known that cnra-planting, and corn-gathering, at least among all the still uncolonized tribes, are left entirely to the fernales and childrea, and a few superannuated old men. It is not generally known, perhaps, that this labour is not compulsory, and that it is arsumed by the females as a just equivalent, in their view, for the onerous and continuous labour of the other sex, in providing meats, and skins for clothing, by the chase, and in defending their villages against their enemies, and kceping intraders off their territories. A good Indian housewife deems this a part of her prerogative, and prides herself to have a store of corn to exercise her hospitality, or duly honour her husband's hospitality, in the entertainment of the lodge guestis.

The area of ground planted is nol, comparitively, large. This matter is easentially regulated by the number of the family, and other circumstances. Spring is a leisure season with them, and by its genial and reviving influence, invites to labour. An Indian female has no cows to mill, no flax to spin, no yarn to reel. Even those labours, which, at other seasons fall to her share, are now intermitted. She has apukwas to galher to make mats. Sugar-making has ènded. She has no skins to dress, for the hunt has ended, the animals being out of season. It is at this time that the pelt grows bad, the bair hecomes loose and falls off, and nature itself teaches the hunter, that the species must have repose, and be allowed a listle time to replenish. Under these circumstances the mistress
of the lodge and her train, gally out of the lodge into the corn-field, and with the light pemidgeag akwut, or small hoe, open up the soft ground and deposit their treasured mondamin.

The Indian is emphatically a superstitious being, believing in all sors of magical, and secret, and wonderful influences. Wornan, herself, comes in for no amall share of these supposed influences. 1 shrewdly suspect that one balf of the credit we have been in the habit of giving the warrior, on the acore of vinue, in his treatment of eaptives, is due alone to his supersitions. He is afraid, at all times, to spoil his luck, cross his fate, and do some untoward act, by which he might, perchance, fall under a tad epiritual influence.

To the wewun, or wife-che equa, or woman, to the gut or mocher,to the equázas, or girl, and to the dánis, or daughter, and shema, or rister, he looks, as wielding, in their several capacities, whether kindred or nob, these mystic influences over his luck. In consequence of this, the fomme never walks in the path before him. It is an unpropitious sign. If abe crose his track, when he is about to set out on a hunting, or war exconion, his luck is gone. If she is ill, from natural causes, she canno even stay in the same wigwam. She cannot use a cup or a bowl without remdering it, in his view, unclean.

A singular proof of this belief, in both sexes of the mysterious influence of the stape of a woman on the vegetable and insect creation, is found in an ancient custom, which was related to me, reapecting corn-planting. It wat the practice of the hunter's wife, when the field of corn had been phanted, to choose the first dark or overclouded evening, to perfortio a secret circuit, zans habilement, around the field. For this purpose she sliph out of the lodge in the evening, unobserved, to some obscure nook, where she completely disrobed. Then taking her matchecota, or principla garment in one hand, she dragged it around the field. This was thought to ensure a prolific crop, and to prevent the essauls of insecte and worms upon the grain. It was supposed they could not creep over the chamed line.
Bet if corn-planting be done in a lively and satiofied, and not a slavish apiri, com-guthering and husking is a season of decided thankfulness and merriment At these gutherings, the chiefs end oid men are mere spectatorb, although they are pleased spectators, the young only sharing in the eport. Who has not seen, the sedale ogema in such a vicinage, smoking a dignified pipe with senatorial ease. On the other hand, turning to the group of nature's red daughters and their young cobors, it may be safeIy affirmed that laughter and garrulity constitute no part of the character-- tries of civilization. Whatever else custom bas bound fast, in the domexcic female circle of forest life, the tongue is left loose. Nor doea it require, our obeerration leads us to think, one tenth pert of the wit or dratiary of ancient Athons, to set their risible facalies in motion.

# INDIAN IDEAS OF IMMORTALITY, 

## ADD TRE

$<$

## REPOSE OF THE SOUL.

When an Indian corpse is put in a coffin, among the tribes of the LakeAlgonquins, the lid is tied down, and not nailed. On depositing it in the grave, the rope or string is loosed, and the weight of the earth alone relied on, to keep it in a fixed pasition. The reason they give for this, is, that the soul may have free egress from the body.

Over the top of the grave a coveriog of cedar bark is put, to shed the rain. This is roof-shaped and the whole saructure looks, slightly, like a house in miniature. It has guble ends. Through one of these, being the head, an aperture is cut. On asking a Chippewa why this was done, he replied,_" To allow the soul to pass out, and io."
" I thought," I rephied, "that you believed that the soul went up from the body at the time of death, to a land of happiness. How, then, can it remain in the body ${ }^{\prime \prime}$
"There are two souls," replied the Indian philosopher.
"How can this be? my friend."
"It is easily explained," said he.
"You know that, in dreams, we pass over wide countries, and see hills and lakes and mountains, and many scenes, which pass before our eyes, and affect us. Yet, at the same time, our bodies do not stir, and there is a soul left with the body,-else it would be dead. So, you perceive, it muss be another soul that accompanies us.'

This conversation took place, in the Indian country. I knew the Indian very well, and had noticed the practice, not general now, on the frontiers, of tying the coffin-lid, in burials. It is at the orifice in the bark sheeting mentioned, that the portion of food, consecrated in feass for the dead, is set. It could not hut happen, that the food should be eaten by the bysarix, wolf, or some other animal, known to prowl at night; nor that, Indian superstition, ever ready to turn slight appearences of this kind to account, should aturibute its abstraction to the spirit of the deceased.

When Lucas Fox sailed to discover the northwest passage to India in I631, he carried a letter from Charlea I. to the Emperor of Japan. Geography has been slower in settling the question of the northweer passage and the mouth of the Niger, than any other points on the globe. It is only in our age that both these questions have been satiafactorily solved.

## PUGASAING;

## on,

## THE GAME OF THE BOWL

Thise is the principal game of hazard among the northern tribes. It is played with thirteen pieces, hustled in a vessel called onágun, which is a lind of wooden bowl. They are represented, and named, as follows.

$\sqrt{ } \sqrt{ }$

$\boldsymbol{I}$

I

3Y

The pieces marked No. 1, in this cut, of which there are two, are called Ininewug, or men. They are made topering, or wedgeshaped in thickness, so as to make it possible, in throwing them, that they mny stand on their base. Number 2 , is called Gitshee Kenabik, or the Great Serpent. It consists of two pieces, one of which is fintailect, or a water-terpent, the
other truncated, and is probably designed as terrestrial. They are formea wedge-shaped, so as to be capable of standing on their bases length-wise. Each has four doss. Number 3, is called Pugamagun, or the war club. It has six marks on the handie, on the red side, and four radiating from the orifice of the club end $;$ and four marks on the handle of the white side ; and six radiating marks from the orifice on the club-end, making ten on each side. Number 4 is called Keego, which is the generic name for a fish. The four circular pieces of brass, slightly concave, with a flat surface on the aper, are called Ozawabiks. The chree bird-shaped piecea, Sheehebwug, or ducks.

All but the circular pieces are made out of a fine kind of bone. One side of the piece is white, of the natural colour of the bones, and polished, the other red. Tbe brass pieces have the conver side bright, the concave black. They are all shaken together, and thrown out of the onágun, as dice. The term pugasaing denotes this act of throwing. It is the participinl form of the verb.-The following rules gevern the game:

1. When the pieces are turned on the red side, and one of the Ininewugs stands upright on the bright side of one of the brass peces, it counta 158 .

2 When all the pieces turn red side up, and the Gitshee Kenabik with the tail stands on the bright side of the braes piece, it counts 138.
3. When all turn up red, it counts 58 whether the brass pieces be hright or black side up.
4. When the Gitshee Kenabik and his associate, and the two Ininewugs turn up white side, and the other pieces red, it counla 58, irrespective of the concave or convex position of the hrass pieses.
5. When all the pieces turn up white, it counts 38 , whether the Ozaw bike, be bright or black.
6. When the Gitshee Kenabik and his associate turn up red, and the other white, it enunts 38 , the brass pieces immaterial.
7. When one of the Ininewuga stands up, it counts 50 , without regard to the position of all the rest
8. When either of the Gitshee Kenabiks stands upright, it count 40, irrespective of the position of the othera
9. When all the pieces turn up white, excepting one, and the Ozawabilcs dark, it counts 20.
10. When all turo up red, except one, and the hrass pieces bright, it counta 15.
11. When the whole of the pieces turn up white, but one, with the Ozawabiks bright, it counts 10 .
12. When a brass piece turne up dark, the two Gitshee Kenabiks and the two men red, and the remaining pieces white, it counts 8.

13 When the brass piece turns up bright, the two Gishee Kenablat and one of the men red, and ail the rest white, it is 6 .
14. When the Gitshee Kenabik in chief, and one of the men turn up red, the Ozawabiks, bright, and all the otbers white, it is 4.
15. When both the Keaabilss, and both men, and the three ducks, turn up red, the brass piece black, and either the Keego, or a duck white, it is 5 .
16. When all the pieces turn up red, but one of the Ininewuge, and the brass piece black, it counts 2.

The limit of the game is stipulated. The parties throw up for the play.

This gume is very fascinating to some portions of the Indians. They stake at it their ornaments, weapons, clothing, canoes, horses, every thing in fact they possess; and have been known, it is said, to set up their wivea and children, and aven to forfeit their own liberty. Of such desperate stales, I have seen no examples, nor do I think the game italf in coramon use. It is rather coofined to certain persons, who bold the relative rank of gemblers in Indian society-men who are not noted as hunters or warriors, or steady providers for their families. Among these are persons who bear the term of lenadizze-wug, that is, wanderers about the country, braggadocios, or fops. It can hardly be classed witb the popular games of amasement, by which slill and dexterity are acquired. I have generally found the chiefs and graver men of the tribes, who encouraged the young men to play ball, and are sure to be present at the customary sports, to witness, and sanction, and applaud them, speale lightly and disparagingly of this game of hazard. Yet, it cannot be denied, that some of the chiefs, distinguished in war and tbe chase, at the west, can be referred to, as lending their exmmple to its fascinating power.

An aoalysis of this game, to show its arithmetical principles and powers, might be gone into; but it is no part of the present design to take up such considerations here, far less to pursue the comparison and extension of customs of this kind among the modern western tribes. It may be sufficient to say, from the foregoing rules, that there seems to be no writ in the throw, and that the coont proceeds by decimald, for all numbera over $B$. Doubless these rules, are but a part of the whole series, lnown to experienced players. They comprise, however, ail that have been revealed to me.
> "Gambling is not peculiar to our race,
> The Indian gembles with as fixed a face."

Herodotus says of the ancient Thracians-shat "the most honourable life, with them, is a life of war and plunder; the most contemptible that of a husbandman. Their supreme delight is war and plunder." Who might not suppose, were the name withheld, that this had been said by some modern mriter of the Pawnees, or the Camanches?

## REVERENCE AND AFFECTION FOR PARENTS.

Theze lived a noted chief at Michilimackinac, in days patr, called Gitahe Naygow, or the Great-Sand-Dune, a name, or rather nick-name, which he had, probably, derived from his birth and early residence at a spot of very imposing appearance, so called, on the southern shore of Lake Superior, which is east of the range of the Pictured Rocks. He was a Chippewa, a warrior and a counsellor, of that tribe, and had mingled freely in the stirring scenes of war and border foray, which marked the closing years of French domination in the Canadas. He lived to be very old, and became so feeble at last, that he could not travel by land, when Spring carne on and bis people prepared to move their lodges, from their sugar-camp in the forest, to the open lake shore. They were then inland, on the waters of the Manistee river, a stream which eaters the northern shores of Lake Michigan. It was his last winter on earth; his beart was gladdened by once more feeling the genial rays of Spring, and he desired to go with them, to behold, for the last time, the expanded lake and inhale its pure breezes. He must needs be conveyed by hand. This act of piety was performed by his daughter, then a young woman. She carried him on her back from their camp to the lake shore, where they erected their lodge and pussed their spring, and where he eventually died and was buried.

This relation $l$ had from her own lips, at the egency of Michilimackinac, in 1833. I asked her how she had carried him. She replied, with the Indian apekan, or head-strap. When tired she rested, and again pursued her way, on-wa-be-win by on-we-be-win, or rest by rest, in the manner practised in carrying heavy packages over the portages. Her name was Nadowakwa, or the fernale Iroquois. She was then, perhaps, about fify-6ve years of age, and the wife of a chief called Saganosh, whose home and jurisdiction were in the group of the SL. Martin's Islands, north of Michilimackinac.

The incident was not voluntarily told, but came out, incidentally, in some inquiries I was making respecting historical events, in the vicinity. One such incident goes far to vindicate the affeclions of this people, and should teach us, that they are of the same general lineage with ourselves, and only require letters and Chriatianity, to exalt them in the scale of being.

The first words of men, says Harris in his Hermes, like their first ideas, bad an immediate reference to sensible ohjects; in after days, when they began to discern with their intellect, they took those words which they found already made, and transferred them by metaphor, to intellectual coneeptions.

## SKETCHES OF THE LIVES OF

## NOTED RED MEN AND WOMEN,

## WHO HAFE APPEARED ON THE WESTERN CONTINENT,

## ANDAIG WEOS, OR CROWS-FLESH.

Manr persons among the Indian race, have attracted notice from their exploits on the war-path. Andaig Weos was not among the number of these, or if he had mingled in such events, his deeds of daring are now loss amid the rememhrance of better qualities. He was a chief of the once prominent and reigning band of Odjibwa Algonquins, who are called Chippewas, located at Chegoimgon, on Lake Superior, where his name is cherished in local tradition, for the nohle and disinterested deeds which he performed in former days. He lived in the latter parr of the 18 th century.

It was perhaps forty years ago-said my informant, it was while the bate Mr. Nolin, of Sault Ste Maries was a trader in the Chippewa country, between lake Superior and the Mississippi, that he wiatered one year low down on the Chippewa river. On his way dowa this stream, and while he was still on one of ita sources, cold weather set in suddenly, the ice formed, and be was unable to get on with his goods. He consequently put them an cache, according to the custom of the country, and proceeded on foot, with his men to the lower part of the river, to the spot at which he had deterraioed to winter. Here he felled trees, and built his house, and having made all things ready, he set out with his men on his return to his cache, in order to bring down his goods.

On the way he fell in with an Indian hunter and his wife, who followed him to the place where be had secreted his goods. On reaching this, he filled a boule with spirits and gave a glass to each of his men, took one himself, and then filling the glass presented it to the Iadian. This was done after the camp had been made for the night. It so happened that the Indian was taken suddenly ill that night, and before day light died. Nolin and his men huried him, and then proceeded back to his wintering house below, each man carrying a pack of goods; and the widow rejoined her friends.

Afier the Indians had taken their credits, and dispersed to their several wintering grounds, it was rumoured amongst them, that the treder had
administered poison to the Indian who died so suddenly after taking the glass of apirits. And this opinion guined ground, although the widow woman repeatedly told the lodians, that the liquor given to her deceased husband was from the same bottle and glass, that all the French people had drank from. But it was of no avail; the rumour grew, and Mr. Nolin begon to be apprebensive, as he had already learnt that the Indians meaot to kill him. To confirm this suspicion a party of forty men, soon after, entered his house, all armed, painted black, and with war dresses oo. They were all presented with a piece of tobacco, as was customary, when each of them threw it into the fire. No alternative now appearcd to remain to aver the blow, which he was convinced must soon follow. Almost at the same instant, his men intimated that another party, of six mon more, were arriving.

It proved to be the chief Andaig Weos, from near Lac du Flarabesu, in search of a trader, for a supply of tobacco and ammunition. On entering, the chief eyed the warriors, and asked Mr. N. whether he had giveo them tobacco. He replied that he had, and that they had all, to a man, thrown it in the fire, and, he added, that they intended to kill him. The chief asked for some tobacco, which he threw down before the warriors, telling them to smoke it, adding in au authoritive voice, that when Indians visited traders, it was with an intention of getting tobacco from them to smoke and and not to throvo into the fire; and that, for his part, he had been a long time without smoking, and was very happy to find a trader to supply him with that article. This present from him, with the rehuke, was received with silent acquiescence,--no one venturing a reply.
The chief next demanded liquor of the trader, saying, "that he intended to make them drink." The politic Freachman remonstrated, saying, "that if this was done, he should surely he killed." "Fear not, Frenchman," replied the chief, boldly. "These are not men who want to kill you: they are children. I, and my wariors will guard you." On these assurances, a keg of liquor was given, but with the greatest relactance. The chief immediately presented it to the war-party, hut cautioned them to drink it at a distance, and not to come nigh the trader during the night They obeyed him. They took it a short distance and drank is, and kept up a dreadful yelling all night, but did not molest the house.

The next morning Avdaig Weos demanded tobacco of the still uneasy marchand voyagour, and ordered one of his young men to distribute it to the Indians in the war-dress. He then rose and addressed then in an energetic and authoritative speecb, telling them to march off, without lasting food; that they were watriors, and needed not any thing of the kind; and if they did, they were hunters,- they had guns, and might hunt and kill and eat "You get nothing more here," he added. "This trader has come here to supply your wants, and you seek to kill him-a poor reward for the trouble and the anxiety he has undergonel This is no way
of requiting white people." They all, to a man started, and went off, and gare the trader no farther moletation while he remained in the country.

On another occasion Andaig Weos was placed in a situation which afforded a very different eppecies of testimony to his principles and integrity. A French trader had entered lake Superior so late in the season, that with every effort, be could get no farther than Pointe La Petite Fille, before the ice arrested his progress. Here he was obliged wo build his wintering house, bat he soon ran short of provisions, and was obliged to visit La Pointe, with his men, in order to obtain finh-leaving his house and sloreroom locked, with his goods, ammunition, and liquors, and resolving to return immediately. But the weather came on 80 bad, that thore was no poesibility of his immediate retum, and the winter proved 30 unfavourabla that he was obliged to spend two months at that pose.

During this time, the chief Andaig Weos, with fifteen of his men, came out from the interior, to the shores of the lake, for the purpose of trading, each carrying a pack of beaver, or other furs. On arriving at the point La Petite Fille, they found the trader's house lacked and no one there. The chief said to his followers. - It is customary for traders to invite Indians into their house, and to receive them politely; hut as there is no one to receive us, we must act according to circumstaoces. He then ordered the door to be opened, with as littie injury as possible, walked in, with his party, and caused a good fire to be huilt in the chimney. On opening the storedoor he found they could be supplied wath all they wanted. He told his party, on no account to wuch, or take away any thing, hut shut up the door, and maid, "that he would, on the morrow, act the trader's part."

They spant the night in the house. Early the next moming, he arose and addressed them, telling them, that he would now commence trading with them. This he accordingly did, and when all was finished, becarefully packed the furs, and piled the packe, and covered them with an oilcloth. He then ggain addressed them, saying that it was customary for a trader to give robacco and a keg of spirita, when Indians bad traded handsomely. He, therefore, thought himself authorized wo oberve thit rule, and accordingly gave a keg of spirits and some tobacco. "The spirits," he said, "must not be drank here. We mutt take it to our hunting camp" and gave orders for returaing immediately. He thon caused the doors to be shut, in the best manner possible, and the outer door to be barricaded with logs, and departed.

When the trader returned, and found his house had been hroken open, he began wo bewail his fate, being sure he had been rohbed; but on entering his storeroom and beholding the furs, his fears were turned to joy. On examining his inventory, and comparing it with the amount of his furs, he declared, that had he been present, he could not have traded to better advantage, nor have made such e profit on his goode

These traita are not solibary and accidental It happened at another time, that a Mr. Lamotue, who bad wintered in the Folleavoine country, unfortunately had a quarrel with the Indians, at the close of the season, just when be was about to embark on hie return with his furs In the heat of their passion the lndians broke all his canoes in pieces, and confined him a prisoner, by ordering him to encamp on an island in the Bt Croix river.

In this situation he remained, closely watched by the Indians, till all the ofter traders had departed and gone out of the country to renew their supplies, when the chief Andaig Weor arrived. He comprehended the case in an instant, and having found that the matuer of offence was one of no importance, he immediately went to the Indian village, and in a loud and authoritative tone of voice, so as to be heard by all, commended suitable canoes to be taken to the imprisoned trader-a summons which was promptly obeyed. He then went to Mr. Lamotte and toid him to embark fearlessly, and that he himself would see that he was oot further hindered, at the same time lamenting the lateness of his return.

The general conduct of this chief was marked by kindness and arbanity. When traders arrived at Chagoimegon, where he lived, it was his custom to order his young men to cover and protect their baggage leat any thing should be injured or stolen. He was of the lineage of the noted war-chief, Abojeeg, or Wab Ojeeg. He lived to be very old, so that he walked nearly bent double-using a cane. The present ruling chief of that place, called Pezhickee, is his grandson. These anecdotes were related by Mr. Cadotte, of Lapeinte, in the year 1829, and are believed to be entitled to full confidence.

The Tartart cannot pronounce the latter h. Those of Bulgaria pronounce the word blacks as if written ilacs. It is noticeable, that the Odjibwas and their cognate tribes at the north, not only malce great use of the letter $b$, in native words, hat when they come to pronounce English worde, in which the letter v occurs, they invariably substitute the b for it, as in village, and vinegar.

There are three lenters in the English alphabet which the above tribes do not pronounce They are f, r, and l. For $f$, they subscitute, in their attenpts to pronounce foreign words, $p$. The sound of $r$, they change to broad a, or drop. L is changed to $\mathbf{n}$.

Singing and dancing are applied to political and to religious purposes by the Indians. When they wish to raise a war-party, they meet to sing and dance: when they wish to supplicate the divine mercy on a sick parson, they assemble in a lodge, to sing and dance. No grave act is performed without singing and dancing.

## LANGUAGE.

## LECTURES ON THE GRAMMATICAL STRUCTURE

## OF THE INDIAN LANGUAGE.

The course of lectures, of which the following are part, were delivered before the St. Mary's commiluee of the Algic Society. Two of them only have been published. They are here continued from the article "Indian Longuages," at page 202 of the "Narrative of the Discovery of the actual Source of the Mississippi, in Itasca Lake," published hy the Harpers, in 1834. The family of languages selected as the topic of inquiry, is the Algonquin. All the examples employed are drawn from that particular type of it which is called Chippewa, in our transactions with them, hut which they uniformly pronounce themselves, Od.jib-wa. These terms are employed as perfect synonyms. The phrase "Odjibwa-Algonquin," wherever it occurs, is intended to link, in the mind of the inquirer, the species and the genus (if we may borrow a term from natural history) of the language, hut is not fraught with, or intended to convey, any additional idea The three terms relate to one and the same people.

## LECTURE III.

Otmerrations on the Adjective-IL dintinction into two clasece denoted by the presence ar abmence of vitality-Examples of the animates and inanimateo-Mode of tbeir conversion into subetantives-How pronouns are applied to the derivatives, and the manner of forming compound lemma from adjective bases, to deecribe the varions natorad phenomena-The application of these principles in common conversation, and in the description of natoral and artificial objoc:-Adjectivee alwaya preserve the distinction of number-Numerab-Arithmetical capocity of the language-The onit eritu in duplicate.

1. It has been remarked that the dietinction of words inte animates and inanimates, is a principle intimately interwoven throughout the structure of the language. It is, in fact, so deeply imprinted upon its grammatical forms, and is so perpetually recurring, that it may be looked upon, not only as forming a striking peculiarity of the language, but as constituting the fundomental principle of its structure, from which all other rules have derived their limits, and to which they have been made to conform. No class of words appears to have escaped its impress. Whatever concords
oher laws impose, they all agree, and are made subeervient in the esablishment of this.

It might appear to be a useless distinction in the adjective, when the subetantive is thus marked; but it will be recollected that it is in the plural of the subatantive only, that the distinction is marked. And we shall presently bave occasion to show, that redundancy of forms, are, to considerahle extent, obviated in practice.

For the origin of the principle iself, we need look only to nature, which endows animate bodies with enimate properties and qualities, and vice veras. But it is due tothe tribes who speak this language, to have invented one set of adjective symbols to express the ideas peculiarly appropriate to the fonmer, and another set applicable, exclusively, to the latter; and to have given the words good and bad, black and white, great and small, handsome and ugly, such modifications as are practically competont to indicate the general nature of the objects referred to, whother provided with, or dessitule of the vital principle. And not only so, but by the figurative use of these forms, to exalt inanimate masses into the class of living beings, or to strip the latter of the properties of life-a priaciple of much importance to their public speakers.

This distinction is shown in the following examplea, in which it will be observed, that the inflection $i z z$, generally denote the personal, and am, an, or wud, the impersonal forms.

| Had | Monaud | ud | Monaud | izzi. |
| :---: | :---: | :---: | :---: | :---: |
| Ugly | Gusbkoonaug | wud | Gushkoonaug | oozzi |
| Beautitul | Bishegaindaug | wud | Bishegaindaug | $g$ corzi |
| Strong | Song | un | Song | izzi |
| Son | Nok | un | Nok | izzi. |
| Hard | Mushkow | au | Mushkow | izzi |
| Smooth | Shoiskw | au | Shoisk | oozzi. |
| Black | Mukkuddaw | a | Mukkuddaw | izzi |
| White | Waubisbl | au | Waubishk | zzi. |
| Yellow | Ozahw | au | Ozahw | izzi |
| Red | Miskw | au | Miskw | izzi |
| Blue | Ozhahwushkw | an | Ozhahwushlw | irzi |
| Stour | Sheew | un | Sheew | izzi |
| Swear | Weeshkoh | un | Weeshkob | rzi |
| Light | Naung | un | Naung | iszi. |

It is not, however, in all cases, by mere modifications of the adjecturc, that these distinctions are expressed. Words cotally different in sound, and evidently derived from radically different roots, are, in some few instances, employed, as in the following axamples:

Adj: Inanimate
Good
Bad
Large
Small Old

Onigheahin
Monaudud
Mitshau
Pungee
Geekau

Adj: Animate.
Minno.
Mudjea
Mindiddo.
Uggaushi
Gitizzi

It may be remarked of these forms, that although the impersonal will, in mome instances, talse the personal inflections, the rule is not reciprocated, and minno, and mindiddo, and gitizzi, and all words similarly situated, remain unchangeably animates. The word pungee, is limited to the expression of quantity, and its correspondent uggaushi, to size, or quality. Kisheda, (hor) is restricted to the beat of a fire ; keezhauta, to the heat of the san. There is still a third term to indicate the natural heat of the body, Kizzizoo. Mishau (large) is generally applied to countries, lakes, rivers, sce Mindiddo, to the body, and gishee, indiscriminately. Onishishin, and its correspondent onishishsha, signify, handsome or fair, as well as good. Kwonaudj a. a. and kwonaudj ewun a i. mean, strictly, bandsome, and imply nothing further. Minno, is the approprinte personal form for good. Mudgee and monaudud, may reciprocally change genders, the first by the addition of iee, and the second by altering $u d$ to izzi

Distinctions of this kind are of considerable importance in a practical point of view, and their observance or neglect, are noticed with scrupulous enactiess by the Indians. The want of inanimate forms to such words as happy, sorrowful, brave, sick \&cc. creates no confusion, as inanimate nouns cannoc, strictly speaking, take upon themselves such qualities, and when they do-as they sometimes do, by one of those extravagant figures of apeech, which are used in their tales of transformations, the animate forms answer all purposes. For in these tales the whole material creation may be clothed with animation. The rule, as exhibited in practice, is limited, with sufficieat accuracy, to the boundaries prescribed by nature.

To avoid a reperition of formas, were the noun and the adjective both to be employed in their usual relation, the later is endowed with a pronomimal, or subatantive inflection. And the use of the noun, in ite separate form, is thus wholly supereeded. Thus onishishin, a i. and onishishsha, s. a. become Wanishishing, that which is good, or fair, and Wanishinhid, he who is good or fair. The following examples will exhibit this rele, under each of its forms.

Compound or Noun-Adjective Animala.

| Black | Mukkuddaw izzi |  | Makuddaw izzid |
| :--- | :--- | :--- | :--- |
| White | Waubishk | izzi | Wyaubighk izzid. |
| Yellow | Ozahw | izzi | Wazauw izzid. |
| Red | Miskw | izzi | Mashk oozzid. |
| Strong | Song | izzi | Song |
|  |  |  |  |

Noun-Adjective Inanimate.

| Black | Mukkuddaw au | Mukkuddaw aug. |  |
| :--- | :--- | :--- | :--- |
| White | Waubishk | au | Wyaubishk aug. |
| Yellow | Ozahw | au | Wazhauw aug. |
| Red | Mishkw | au | Mishkw |

The animate forms in these examples will be recognized, as exhibiting a further extension of the rule, rueationed in the preceding chapler, by which substantives are formed from the indicative of the verb by a permutation of the vowels. And these forms are likewise rendered plural in the manner there mentioned. They also undergo changes to indicate the various persons. For instance onishisha is thus declined to mark the person.

| Wanishish-eyaun | L (am) good, or fair. |
| :--- | :--- |
| Wänishisb-eyun | Thou (art) good, or fair. |
| Wanishish-id | He (is) good or fair. |
| Wänishish-eyang | We (are) good or fair (ex.) |
| Wanisbish-eyung | We (are) good a fair (in.) |
| Wanishisheyaig | Ye (are) good or fair. |
| Wanishish-idigj | They (are) good or fair. |

The inanimate forms, being without person, are simply rendered ploral by $i n$, changing maisk waug, to maiskwaug-in, \&c. \&c. The verbal signification which these forms assume, as indicated in the words am, art, is, are, is to be sought in the permutative change of the first syllable. Thus o is changed to wa, muk to mak, waub to wy-aub, ozau to wazau, misk to maisk, \&c. The pronoun, as is usual in the double compounde, is formed wholly hy the inflections eyaun, eyun, \&c.

The strong tendency of the adjective to assume a personal, or pronom-ico-substantive form, leads to the employment of many words in a particular, or exclusive sense And in any future practical attempls with the language, it will be found greally to facilitate its acquisition if the adjectives are arranged in distinct classes, separated by this characteristic principle of their application. The examples we have given are chiefly those which may be considered strictly animate, or manimate, admit of double forms, and are of general use. Many of the examples recorded in the original manuscripts employed in these lectures, are of a more concrete characler, and, at the same time, a more limited use. Thus shaugwewe, is a weak person, nokaugumme, a weak drink, nokaugwud, a weak, or soft piece of wood. Sussagau, is fine, but can only be applied to personal appearance: beesau, indicates fine grains. Keewusblwa in giddy, and keewusblkwibee, giddy with drink, both being resricted to the third person Songun and songizzi, are the personal and impersanal forms of strong, as given above. But Mushkowaugumme, is strong drink. In like manner the two worde for hard, es above, are restricted to solid sub-
stances. Sunnuhgud is hard (to endure,) waindud, is easy ( 10 porform.) Songedax is brave, Shaugedaa cowardly, keezhinzhowizzi, active, kizhoKan, swift, onaunegoozzi lively, minwaindum happy, gushkwaindam, eorrowful, but all these forms are confined to the third person of the indicative, singular. Pibbigwau, is a rough or knotted substance. Pubbiggoozzi, a rough person. Keenwau is long, or tall, (any solid mass.) Kaynozid is a tall person. Tahkozid a short person. Wassayau is light; wassaubizzoo, the light of the eye; wasshauzha, the light of a star, or any luminous body. Keenau is sharp, keenaubikud, a sharp knife, or stone. Keezhaubikeday, is hot metai, a hot stove, \&ze. Keezhaugummeda, is hot water. Aubudgeeton, is useful, $\rightarrow$ useful thing. Wauweeug is frivolous, any thing frivolous in word, or deed. Tubbushish, appears to be a general term for low. Ishpimming is high in the air. Ishpau, is applied to any bigh fixture, as a house, dic. Ishpaubikau is a high rock. Taushkaubikau, a split rock.

These combinations and limitations meet the inquirer at every step They are the curront phrases of the language. They present shor, ready, and often beautiful modes of expression. But as they shed light, borh upon the idiom and genius of the language, I shall not scruple to add further cxamples and illustrations. Ask a Chippewa, the name for rock, and he will answer awzhebik. The generic import of aubik, has been explained. Ask him the name for red rock, and be will answer miskwau-bik,-for white rock, and he will answer waubaubik, for black rock mokkuddawaubik,-for yellow rock, ozahwabik,-for green rock, oz-habwushkwaubik,-for bright rock, wassayaubik, for smooth rock, shoihkwaubik, ecc. compounds in which the words red, white, black, yellow, \&e. unite with aubik. Pursue this inquiry and the following forms will be elicited.

## Impersonal.

Miskwaubik-ud.
Waubaubik-ud.
Mukkuddawaubik-ud.
Ozahwaubik-ud.
Wassayaubik-ud.
Shoiskwaubik-ud.

It (is) a red rock.
It (is) a white rock.
It (is) a black rock.
It (is) a yellow rock.
It (is) a bright rock.
It (is) a smooth rock.
Personal
He (is) a red rock,
$\mathrm{He}_{\mathrm{e}}$ (is) a white rock.
He (is) a black rock
He (is) a yellow rock.
He (ia) a bright tock.
He (iv) a smooth rock.

Add binn to these terms, and they are made to have passed away, 一pre-
fix tak to them, and their future appearance is indicated. The word "is" in the translations, although marked with brackets, is not deemed wholly gratuitous. There is, strictly speaking, an idea of existence given to these compounds, hy the particle au in aubic, which seems to be indirectly a derivative from that great and fundamental root of the language iau. Bix, is, apparently, the radix of the expression for "rock"

Let this mode of interrogation be continued, and extended to other adjectives, or the same adjectives applied to other objects, and results equally regular and numerous will be obtained. Minnis, we shall be told, is an island: miskominnis, a red island; mukkaddaminnis, a black island; waubeminnir, a white island, \&c. Annokwut, is a cloud; miskwaunakwut, a red cloud; mukkuddawukwut, a black cloud; waubahnokwut, a white cloud ; ozahwushkwahnokwut, a blue cloud, \&c. Neebe is the specific term for water; but is not generally used in combination with the adjeccive. The word guma, like aubo, appears to be a goneric term for water, or potahle liquids. Hence the following terms:-

| Gilshee, | Great | Gitshiguma, | Great water |
| :---: | :---: | :---: | :---: |
| Nokun, | Weak. | Nokauguma, | Weak drink. |
| Mushkowau, | Strong. | Mushkowauguma, | Strong drink |
| Weeshkobun, | 8weet. | Weeshkobauguma | Swoet drink |
| Sheemun, | Sour. | Sheewaugume, | Sour drink |
| Weesugun, | Bitter | Weesugauguma, | Bitter dri |
| Minno, | Good. | Minvnuguma, | Good drink. |
| Monaudur, | Bad. | Mahnauguma, | Bad drink |
| Miskwau, | Red. | Miskwauguma, | Red drin |
| Ozahweu, | Yello | Ozahwauguma, | Yellow drink: |
| Weenun, | Dity. | Weennuguma, | Dirty wal |
| Peenad, | Clear. | Peenaugum | Clear Water |

From minno, and from monaudud, good and bad, are derived the following terma. Minnopogwud, it tastes well; minnopogoozzi, he tastes well. Manzhepogwud, it tastes bad; mawzhepogoozzi, he tastes bad, Minnomaugwud, it smells good; minnomaugoozzi, he smeils good ; magghemaugarad, it smells bad $;$ mawhenaugoozzi, he anells had. The inflections gwud, and izzi, here employed, are cleariyindicative, as in other combinations, of the words it and him.
Baimwe is sound. Bximwawa, the passing sound. Minwawa, a pleasant sound. Minweima, a pleasant sound. Maunwawa, a disagreeable sound. Mudwayaushkau, the sound of waves dashing on the shore. Mudwayaunnemud, the sound of winds. Mudway au kooekau, the sound of falling trees. Mudwakumigishin, the sound of a person falling upon the earth. Mudwayain, the solund of any inanimate mese falling on the earth. These examples might be continued ad infinitum. Every modification of circumstancea-almost every peculiarity of thonght is ex-
pressed by some modification of the orthography. Enough has been given to prove that the adjective combines itself with the subetandive, the verb and the pronoun-that the combinations thus produced are numerous, afford concentrated modes of conveying ideas, and ofientimes happy terms of expression. Numarous and prevalent as these forms are, they do not, however, preclude the use of adjectives in their simple forms. The use of the one, or of the other appears to be generally at the option of the speaker. In moal cases brevity or euphony diclates the choice. Usage results from the application of these principles. There may be rules resting upon a hroader basis, but if so, they do not appear to be very obvious. Perhaps the simple adjectives are oftenest employed before verbs and nouns, in the first and second persons singular.

Ningee minno neebsu-nabun,
Ningee minno weesin,
Ningee minno pimmoossay,
Kagal minno geeghigud,
Kwunaudj ningodahs,
Ke minno ian nuh?
Auneende ain deyun?
Keerhamonedo aupadushahawainenik,
Aupaduish Shawaindangoozzeyna,
Aupadusb nau kinwainzh pimmaudizziyun,
Onauneegoozzin,
No miuwaindum wabumaun,
Kwanaudj Kweeweezains,
Kagat Songeedaa,
Kagal onighishsha,
Grishee kinozeo,
Uggausau bámizzi,
Gitshee sussaigau,
Binhegaindaugoozimug wunug,
Ke daukoozzinuh ?
Monaudud maundun muskeekee,
Monaudud aindauyun,
Aindauyann mitshau,
Ne mittigwzab onishishsha,
Ne bikwakon monsududon,
Ne minwaindann appaukoorzegun,

I have alept well.
I have eaten a good meal.
I have walked well, or a good distance.
It (is) a very pleasant day.
I have a handsome garment.
Are you well?
What aila you?
\} God prosper you
\} Good luck attend you.
May you live long.
Be (thou) cbeerful
1 (am) glad to see you
A pretty boy.
He (is) a brave man.
She (ii) handsome
He (is) very tall.
She (is) slender.
He (is) fiuto dressed.
\} They (are) beautiful feathers
Are you sick
This (is) bad medicina.
My place of dwelling (ia) bad.
My place of dwelling is large.
My bow (is) good.
But my atrows (are) bad.
I love mild, or mized, tobacce.
$\left.\begin{array}{l}\text { Kauweekau neezhikay useal- } \\ \text { man ne sugguswaunausee, }\end{array}\right\}$ But I never smoke pure tobecco.
Monaudud maishkowaugumig, Strong drink (is) bad.
Keeguhgee baudjeegonaun, It makes us foolish.
$\left.\begin{array}{l}\text { Gitshee Monedo nebee ogee } \\ \text { ozheton, }\end{array}\right\}$ The Great Spirit made water.

These expressions are put down promiscuously, embracing verbs and nouns as they presented themselves; and without any effort to support the opinion-which may, or may aot be correct-that the elementary forms of the adjectives are most commonly required before verbs and nouns in the first and second persons. The English expression is tbrown into Indian in the most natural manner, and of course, without always giving adjective for adjective, or noun for noun. Thus, God is rendered, no "Monedo," but, "Geezha Monedo," Merciful Spirit. Good luck, is rendered by the compound phrase "Shawajndaugoozzeyun," indicating, in a very general sense the infiuence of kindness or benerabence on success in life. "Songedaía is alone, a brave man; and the word "Kagas," prefixed, is an adverb. In the expression "mild tobacco," the adjective is entirely dispensed with in the Indian, the sense being sufficienty rendered by the compound noun "appaukoozzegun," which always means the Indian weed, or amoking mixture. "Ussamau," on the contrary, without the adjective, signifies, "pure tobacco." "Bikwakon," signifies blunt, or lumpy-headed arrows. Assowaun is the barbed arrow. Kwonadj kweeweezains, means, not simply "pretty boy," but pretty little boy; and there is no mode of using the word boy but in this diminutive form-the the word iself being a derivative, from kewewe, conjugul with the regular diminutive in ains. "Onaunegoozzin" embraces the pronoun, verb and adjective, be thou cheerful. In the last phrase of the examples, "man," ia rendered men (inineewug) in the translation, as the term man cannot be employed in the general plural sense it conveys in this connection, in the original. The word "whiskey," is rendered by the compound phrase ishkodawaubo, literally, fine-liquor, a generic for all kinds of ardent spirits.

These aberrations from the literal term, will convey some conceptions of the difference of the two idioms, although, from the limited nature and object of the examples, they will not indicate the full extent of this difforence. In giving anything like the apirit of the original, mucb greater doviations, in the writen forms, must appear. And in fach not only the structure of the language, but the mode and order of thought of the Indians is so essentially different, that any attempts to preserve the English idiom $\rightarrow$ to give letter for letter, and word for word, must go far to render the translation pure nonsense.
2. Varied as the adjective is, in its changes it has no comparative in. flection. A Chippewa cannot say that one substance is hotter or colder than another ; or of two or more substances unequally heated, that this, or that is the hottest or coldeas, without employing adverbs, or accessory adjectives. And it is accordingly by adverbe, and accessory adjectives, that the degrees of comparison are expressed.
Pimmaudizziwin, is a very general substantive expression, in indicating the tenor of being or life. Izzhewabizziwin, is a term near akin to it, but more appropriately applied to the acts, conduct, manner, or persomal deportment of life. Heace the expressions:

Nin bimmaudizziwin,
Ke bimmaudizziwin,
O Pimmaudizziwin,
Nio dizekewabizziwin,
Ke dizhewâbizziwin,
O Izzhewabizziwin,

My tenor of life.
Thy tenor of life.
His tenor of life, de.
My personal deportment
Thy personal deportment.
His personal deportment, tc.

To form the positive degree of comparison for these terms minno, good, and mudjee, bod, are introduced between the pronoun and verb, giving rise to some permutations of the vowels and consonants, which affect the sound only. Thus:-

Ne minno pimmaudizziwin,
Ke minno pimmaudizziwin,
Minno pimmaudizziwin,
Ne mudjee pimmaadizziwin,
Ke mudjee pimmaudizziwin,
Mudjee pimmaudizziwin,

My good tenor of life.
Thy good tenor of life.
His good tenor of life.
My bad tenor of life.
Thy bad tenor of life.
His bad tenor of life.

To place these forms in the comparative degree, oahwudj, more, is prefixed to the adjective; and the superlative is denoted by mabmoroce an adverb, or an adjective as it is variously applied, but the meaning of which, $i_{n}$ in this conaexion, nost. The degrees of comparison may be cherefore sed down as follows:-
Positive, Kisheda, Hot, (restricted to the heat of a fire.)
Comp. Nahoudj Kisheda, More hot
Super. Mahmowee Kishede, Most hot

Your manner of life is good,
Your manner of life is better,
Your manner of lile is besth,
His manner of lifo is best,
Litle Turtle was hrave,

Ke dizzihewabizziwin onishishin.
$\left\{\begin{array}{c}\text { Ke dizzhewabizziwin nahwadj onis. } \\ \text { hishin. }\end{array}\right.$ bishio.
\{ Ke dizzhewâhizziwin mahmowes onishishin.
Odizzhewabizziwin mahmowee onish. ishinine.
Mikkenokóss songedaab bun.

Tecamseh was braver,
Pontinc was bravest,

Tecumseh nahwidj songedâbun.
Pontiac mabmowee songedaúbun.
9. The adjective assumes a negative form when it is preceeded by the ediverb. Thus the phrase anongedath, he is brave, is changed to, Kahween songedaisec, he is not brave.

Poritive.
Neebwaukh,
He is wise.
Kwonaudjewe, She is handsome,
Oakineegee,
He is young.
Shaugweewee,
He is feeble. Geekhna,

He is old.
Mushkowizzi,
He is strong.

## Negative.

Kahween neebwaukahee, He is not wise.
Kahween kwonsudjewesee, She is not handsome. Kahween oakineegeorea. He is not young. Kahween Shaugweewere, He is not feeble. Kahween Geekkau-see, He is not old. Kahween Mushkowizzisee, He is not strong.

From this rule the indeclinable adjectives-by which is meant those adjectives which do not put on the personal and impersonal forms by inflection, but consist of radically different rook-form exceptions.

| Are you sick? | Ke dahkoozzi nuh? |
| :--- | :--- |
| You are not sick ! | Kahween ke dahksoozzisee I |
| I am happy. | Ne minwaindum. |
| I am unhappy. | Kahween ne minwuinduz-see |
| His manner of life is bed, | Mudjee izzhewabizzi. |
| His manner of life is not bad. | Kshween mudjee a izzhewabizzirses |
| It is large. | Mishau muggud. |
| It is not large. | Kabween mitshau-seenon. |

In these examples the declinable adjectives are rendered negative in cece. The indeclinahle, remain as simple adjuncts to the verbs, and the latter put on the negative form.
4. In the hints and remarks which have now been furnished respecting the Chippewa adjective, its powers and inflections have been shown to run paralletswith those of the substantive, in it separation into animntes and inanimates,-in haring the prononinal inflections,-in taking an inflection for tense-(a topic, which, by the way, has been very cursorily passed over,) and in the nomerous, modifications to form the compounde. This parallelism has also been intimated to hold good with reepect to number-a a subject deeply interesting in itself, as it has is analogy only in the ancient languages, and it was therefore deemed best to defer giving examples till they could be introduced without absatractiog the attention from other points of discussion

Minno and mudjee, good and bad, being of the limited number of personal adjectives, which modern usage permits being applied, although often improperly applied, to inanimate objects, they as well as a few other adjectives, form exceptions to the use of number. Whether we say a good man or a bad man, good men or bad men, the words minno and mudjee, remain the same. But all the declinable and coalescing adjectives-adjectives which join on, and, as it were, melt into the body of the substantive, take the usual plural inflections, and are governed by the same rules in regard to their use, as the substantive, personal adjectives requiring personal plurals, \&cc.

## Adjectives Animate.

Singular.

| Onishishewe mishemin, | Good apple. |
| :--- | :--- |
| Kwonaudjewe eekwā, | Handsome woman. |
| Songedāa inine, | Brave man. |
| Bishegaindaugoozzi peenasee, | Beautiful bird. |
| Ozahwizzi ahmo, | Yellow bee. |

| Plural. |  |
| :---: | :---: |
| Onishishewe-wug mishemin-ug, | Good apples. |
| Kwonaudjewe-wug eekwa-wug, | Handsome women. |
| Songedãá-wug inine-wug, | Brave men. |
| Bishegaindaugoozzi-wug peenasee-wu | g, Beautiful birds. |
| Ozahwizzi-wug ahm-og, | Yellow bees. |
| Adjectives Inanimate. |  |
| Singular. |  |
| Onishishin mittig, | Good tree. |
| $\mathbf{K}$ wonaudj tshemaun, | Handsome canoe. |
| Monaudud ishkoda, | Bad fire. |
| Weeshkobun aidetaig, | Sweet fruit. |
| Plural. |  |
| Onishishin-ŏn mittig-ön, | Good trees. |
| Kwonaudjewun-ön tshemaun-un, | Handsome can |
| Monaudud-ôn ishkod-ân, | Bad fires. |
| Weeshkobun-ön aidetaig-in, | Sweet fruits. |

Peculiar circumstances are supposed to exist, in order to render the use of the adjective, in this connexion with the noun, necessary and proper. But in ordinary instances, as the narration of events, the noun would precede the adjective, and oftentimes, particularly where a second allusion to objects previously named became necessary, the compound expressions would be used. Thus instead of saying the yellow bee, wâyzahwizzid, would distinctly convey the idea of that insect, had the species been before named. Under similar circumstances kainwaukoozzid, agau-
sheid bongaunemud, mushkowaunemud, would respectively signify, a tall tree, a small fly, a strong wind, a hard wind. And these terms would become plural in jig, which, as before mentioned, is a mere modification of ig, one of the five general animate plural inflections of the language.

Kagat wahwinaudj abbenojeeng, is an expression indicating they are tery handsome children. Bubbeeweezheewug monetosug, denoted smal imsots. Minno ncewugizzi, is good tempered, he is good tempered. Mawshininewugizzi, is bed terapered, both having their plural in wug. Nin nuneenah waindum, I am lonesome. Nin nuneenahwaindanmin, we (excluding you) are lonesome. Waweea, is a term generally used to express the adjective sense of round. Kwy, is the scalp. (Weenikny his scalp.) Hence Weewukwon, hat; Wayweewukwonid, a wearer of the hat; and its plural Wayeewukwonidjig, wearers of the hat-she urual term applied to Europeans, or white men generally. These examplea gn to prove, that under every form in which the adjective can be traced, whether in is simplest or most compound state, it is susceptible of number.

The numerals of the language are converted into adverbs, by the inflection ing, making one, once, scc. The unit exists in duplicate.

Parhik, One, general unit
Ingoot, One, numerical unit Aubeding, Once.

Neesh, Two.
Niswee, Three.
Neewin, Four.
Naunun, Five.
N'goodwaswa, Six.
Neeshwauswa, Seven.
Shwaswe, Eight
Shongusswe, Nine.
Meelauswee, Ten.

Neeshing, Twice.
Nissing, Thrice.
Neewing, Four-times.
Nauning, Five-times.
$\mathbf{N}$ goodwatahing, Sir-times.
Neerhwaulshing, Seven-timea,
Shwautahing, Eight-times.
Shongutshing, Nine-times.
Meelaushing, Ten-imes.

These inflections can be carried as high as they can compute numbers. They count decimally. After reaching ten, they repeat, ten and one, ten and two, \&c. to twenty. Twenty is a compound signifying two tens, thity, three tens, su., a mode which is carried up to one hundred n'goodwak. Wak, then becomes the word of denomination, combining with the names of the digits, until they reach a thousand, meetauswauk, literally, ten hundred. Here a new compound lemm is introduced made by prefiring twenty to the last denomination, neshtonnah duswak, which doubles the lest term, thirty triples it, forty quadruples it, \&c., till the computation reaches to ten thousand, n'goodwak dushing n'goodwak, one hundred times one hundred. This is the probable extent of all certain computation. The term Gitshee, (great) prefixed to the last denomination, leaves the number indefinite.

There is no form of the numerals corresponding to second, third, fourth, sce. They can only further say, nitum first, and ishkoandj, lash.

## ORIGIN

ADD

## HISTORY 0F THE RACE,

AS EXHIBITED IN THEIR OWN TRADITIONS.

## THE FLIGHT OF THE SHAWNEES FROM

## THE SOUTH.

A MOHBOAN TRADITIOR.
Mstoxon states, that the Shawnees were, in ancient times, while they lived in the south, defealed by a confederacy of surrounding tribes, and in danger of being totally cut off and annihilated, had it not been for the interference of the Mohegans and Delawares. An alliance between them and the Mohegans, happened in this way. Whilst the Mohegans lived at Schodack, on the Hudeon river, a young warrior of that tribe visited the Shawnees, at their southern residence, and formed a close friendship with a young warrior of his own age. They became as brothers, and rowed for ever to treat each other as such.

The Mohegan warrior bed returaed, and been some years living with his nation, on the banks of the Chatimac, or Hudson, when n general war broke out against the Shamnees. The restless and warlike disposition of this tribe, kept them constautly embroiled with their neighbours. They were unfaithful to their treaties, and this was the cause of perpetual troubles and wars. At length the nations of the south resolved, by a general offort, to rid themselves of so troublesome a people, and began a war, in which the Shawneea were defeated, battle after battle, with great loss. In this emergency, the Mohegan thought of his Shawnee brother, and itsolved to rescue him. He raised a war-parry and being joined by the Lenapees, since called Delawares, they marched to their relief, and brought off the remanant of the tribe to the country of the Lenapees. Here they were put ander the charge of the latter, as their grandfather.
They were now, in the Indian phrase, put between their grandfather's lnees, and treated as litle children. Their hands were clasped and tied together-that is to say, they were taken under their protection, and formed a close allinace. But still, sometimes the child would creep ort
under the old man's legs, and get into trouble-implying that the Shawnees could never forge their warlike propensities.

The evente of the subsequent history of this tribe, after the setrlement of America are well known With the Lenapees, or Delawares, they migrated westward

The above tradition was received from the respectable and venerable chief, above named, in 1827, daring the negotiation of the treaty of Buttes des Morts, on Fox river. At this treaty his people, bearing the modern name of Stockbridges, were present, having, within a few yeara, migrated from their former position in Oneida county, New York, to the watere of Fox river, in Wisconsin.

Metoron was a man of veracity, and of reflective and temperate habits, united to urbanity of manners, and estimable qualicies of head and heart, as I had occasion to know from several yeara' aequaintance with him, be fore he, and his people went from Vernon to the west, as well as after he migrated thither.

The tradition, perhaps with the natural partiality of a tribesman, laya $t 00$ much stress upon noble and generous act of individaal and tribal friendship, but is not inconsistant with other relations, of the early southern pasiion, and irrascible temper of the Shawnee tribe. Their name itsolf, which is a derivative from O-she-wan-ong, the place of the South, is strong presumplive oridence of a forner residence in, or origin from, the extreme south Mr. John Johnston, who was for many years the government agent of this tribe at Piqua, in Ohio, traces them, in an article in the Archmlogia Americana (vol 1, p. 273) to the Suwanee river in Floride. Mr. Gallevin, in the second volume of the same work (p.65) points out their track, from hitorical sourees of undoubted authority, to the baniss of the upper Savanuah, in Georgis; but remarks that they have only been well known to पs aince 1680. They are firs mentioned in our scattored Indian annale, by De Laet, in 1632

It may further bo said, in relation to Metozon's tradition, that there is authority for aseerting, that in the flight of the Shawneed from the wouth, a part of them descended the Kentucky river west, to the Ohio valley, where, in after times, the Shawnees of Pennsylvania and New Jersey, rather formed a re-union with this division of their kindred than led the way for them.

To depart one step from barbarism, is to take oue step towards civilize fion. To tbandon the lodge of bark-to throw aside the bianket-to dir concinue the use of paints-or to neglect the nocturnal orgies of the wabeno, are as certain indications of incipient civilization, as it unquestionably is, to subutitute alphabetical characters for rude hieroglyphice, or to prefer the regular cadences of the gamat, to the wild chanting of the chichagwun.

## CHRONOLOGY.

## THE ERA OF THE ARRIVAL OF THE FRENCH IN

## THE UPPER LAKER.

Ke-wh-rose, a chief of the etraits of St Mary's, told me, during an interview, in 1827, that but seven generations of red men had passed away, since the French first appeared on those straits. If we calse the date of Cartier's first visit to the St. Lawrence, as the era of their acquaintance with this nation, A. D. 1534, we should have 56 years as the period of an Indian generation. Should we take, instead of this, the time of La Salle's first arrival on the upper lakes, 1778, there would, on the contrary, be but a fraction over 22 years for a generation. But neilher of these periods, can be traly said to coincide with the probable era of the chief's historical reminiscences. The first is too early, the last too late. An average of the two, which is required to apply the observation properly, gives 38 years as the Indian generation. This nearly assimilates it to the results among Europeans, leaving 8 years excess. Further data would probably reduce this; but it is a department in which we have so litde material that we must leave it till theae be aecumulated. It may be supposed that the period of Indian longevity, before the introduction of ardent spirits, was equal, perhapa, a little superior, to that of the European; but it did not exceed it, we think, by 8 yeare,

Kewa-kons, whom I knew very well, was a man of sbrewd sense, and respectable powert of observation. He stated, at the same interview, that his tribe, who were of the Odjibwa type of the Algonquins, laid aside their Akeeka, or clay cooking-vessels, at that time, and adopted in lieu of them, the light brasa kettle, which was more portable and permanent And from that time, their skill in pottery declined, until, in our day, it is entirely lost It is curious to reflect, that within the brief period of 150 yeart, a living branch of coarse manufacture among them, has thus been transferred into an object of antiquarian researcb. This fact, sbould mako historians cautious in assigning very remote periods of antiquity to the monumental evidences of by-gone generations.

It is by such considerations that we get a glimpse of some of the general principles wbich attended the early periods of discovery and settlement, in all parts of the convinent Adventurerts came to find gold, or furs, to amasa wealth, get power, or to perform mere exploits. Nobody cared much for the native race, beyond the fact of thair being the medium to lead to theme
specified objects. There were none, to record accuralely, their ants, and other peculianities, which now excite intense interest They died away very fast, whole tribes becoming extinct within a generation or two. The European fabrice, then introduced, were so much superior to their own, that they, at once, discontinued such rude arts as they practised, at least in our northern latitudes. New adventurers followed in the track of Columbus, Amerigo, Caboh, and their compeere and followers, who, in the lapse of time, picked up, from the soil, pieces of coarse potery, pestles and such like things, and holding them up, ssid,-" See these !-here are evidencee of very great skill, and very high antiquity."

It is not the intention by any means, to assert, that there were not antiquitios of a far higher era, and nobler caste, but merely to impress upon inquirers, the necessity of discriminating the different eras in the chronology of our antiquities. All Indian potery, north of the capes of Florida and the Gulf of Mexico, is of, or preceding the ere of the discovery ; but there is found in graves, a species of pottery, and vitrified ware, which was introduced, in the early elages of traffic, by Europeans. Of this transition era between the dying away of the Indian arts, and the introduction of the European, are the rude partes, enamel and glass beads, and shor clay pipes of coarse texture, fnund in Indian cemeteries, but not in the tumuli. In place of these, our ancient Indians used wrought and unwrought sea shells of various speciss, and pipes carved out of seatites and ather soft materials.

Mr. Anderson remarks in his biography of Catherine Brown, that uthe Cherokees are said to possess a language, which is more precise and powerful than any into which learning has poured richness of thought, or genius breathed the enchantments of fancy and eloquence."

David Brown, in one of his letters, in the same volume, terms his people the Tsallakee, of which we must therefore take "Cherokee," $t$ be a corruption. It is seen by the Cherokee alphabet, that the sound of $r$ does not occur in that langusge.

## FAITH.

When Chusco was converted to Christianity at the mission of Michilinackinac, he had planted a field of potatoes on one of the neighbouring islands in lake Huron. In the fall he went over in his canoe, with his aged wife, to dig them-a labour which the old woman set unceremoniously about, as soon as they got into the field. "Stop !" cried the little old man, who had a amall tenor voice and was bent nearly double by age, "dare you begin to dig, till we have thanked the Lord for their growth." They then both knelt down in the field, while he lifted up his voice, in his antive language, in thanks

# SCENES AND ADVENTURES 

## IN THE OZARK MOUNTAINS.

A. D. 1818 AND 1819.

TLOM THE ORIGESAL NOTH AND JOUAKAL

## PRELIMINARY REMARKS.

$\nabla_{\text {kry }}$ litle, it is conceived, is necessary to enable the reader to determine the writer's position on the extreme south western frontiers, in the year 1818. He had spent the summer of that year in traversing the mine districh, which extends along the right bank of the Mississippi, between the mouth of the Maromeg and the diluvial, cliffs south of Cape Girardeau, exteoding west and south westward to the sources of the St. Francis. In these mineralogical rambles, which were pursued sometimes on foot, and sometimes on borseback, or whecls, be made acquaintance with many extimable men, amongt whom he may name the Austins, father and son, the late Col Ashley, John Rice Jones, Esq., and many others who are still living, by all whom, his object in visiting the country was cordially approved and encouraged, at all times. He also became acquainted with practical miners, and persons of enterprize who were not only familiar with the settled frontiers, but who had occasionally penetrated heyond them, into the broad expanse of bighlands, now geographically known ander the term of, the Ozark Chain. Geologically considered, the mine conntry is but the eastern flanks of this chain, which extends fush to the banks of the Mississippi, and has its terminus in that elevated range of mural clits, which form so striking and often picturesque a display, between St Genevieve and St. Louis. There was, at the time, a general apprehension felt and expressed, hy hunters and others who had penetrated those wilds in quest of deer and buffalo, or of saltpetre-arth in the limestone caves, of the predatory tribe of the Osages,--a people who had for years enjoyed the bad reputacion of being thieves and plunderers. All concurred, however, in the interesting character of the country extending in a general course, south-westwardly, from the junction of the Missour with the Misaissippi. He felt an ardent desire to penetrate this terra incognita. He could not learn that any exploratory journey had been made towerds the Rocky Mountains, since the well known expeditions of Lowis and Clark, up the Missouri, and of Lieut Pike, across the upper region of the Arkansan, to Sante Fe and Chihunhua Breckentidge had
subsequently published an account of a trip to Council Bluffe.* But neither of these routes crossed the wide and mountanious tracts referred to, or gave any definite information respecting them. Viewed on the map, these routes formed the general exterior outlines, but they left the faterior filling up wo be supplied,-or, if supplied at all, it was too often with such rague phrases as these-"Here are salt mountaina." "The - is supposed to take its rise here." "Volcanic hills," and so forth. The geology of the country furnished no indications whatever of the probability of the latter remark. The kind of peeudo-pumice found floating down the Missouri, in high water, had been stated by Lewis and Clarke, whave a far more remote, and local origin. The description of rock salc, in mountain mass, had long been numbered by popular belief, among the fanciful creations of an exciting political ora; and together with western volcanoes, had settled down among those antiquarian rumours, which hold up, as thair prime item, the existence of the living mammoth "beyond the big lakea."

If the writer of the notes and jouroal which furnish these sketches, was not swayed by any particular theories of this nature, yet was he not free from the expectation of finding abundant materials, in the natural productions and scenery and incidents of the journey, to reward him amply for its perils. He had received from hunters several objects of the minerological and geological collection which he made, while living at Potosi, and Mine à Button: from these wild borders, and, without pretending to estimate the force of each particular object which made up the sum of his motives, he resolved to organize an expedition, with all the means he could muster, and explore the region. The Austins, who had treated him with marked kindness and attention, from the hour of his first landing in Missouri, were then preparing to make their first movement into Teras, and held out to him a fine theatre for enterprise; but it wes one not suited to his particular means or taste. He recoiled from the subtlety of the Spanish character; and is free to confess, that he deemed it a fir more atrractive latitude for the zea maize and the cotton plant, than for those pursuits which led him to prefer the more rugged eminences of the Ozarks They, in the end, founded a republic, and he only made an.adventurous jonrmey.

Having thus recalled the era and the motive of the following sketchee, the purport of these remarks is accomplished.

Neto York, 1844.

[^11]
## CHAPTERI.

#### Abstract

Thinge to be thonght of befoes planging into the wrods-Composicion of the party, and rasoand why it we not mose numerone-First night's encampnen-Preliminarian -Sleap in a deserted lndian lodgo-A singular variety of the Fox Squirrel-The Pack Horse ecape-Crom the elevation called the Pinery-Reach the octakirta of the eetlementa in the palley of the Fourche $A^{\prime}$ Courtois.

Whozver would venture into the wildemess, should provide himself with such articles of personal comfort or safety, as habits, forecast, or the paricular object of pursuit or observation, require. Every one will think of arms and ammunition, but there are other things required to make life pleasant, or even tolerable in the woods. This, prior excursions had already taught me, but the lesson was repeated by those of greater experience. There were two persons who had agreed to go with me, and stick by me, to the end,-the one a native of Massachussets, and the other, of Connecticut, both like myself, new in the field, and unacquainted with life in the woods. What they lacked in this art, they more than made up, I thought, in intelligence, enterprise and resource. The name of the first was Brigham. The other, I shall allude to, under the name of Enobiti. Some three or four other persons, natives of the region, had consented to go as bunters, or adventurers into a new field for emigration, but it so happened, that trhen all was ready-when every objection to the tour had been obviated, and every want supplied, and when my two easteñ friends came on to the ground, these persons all quietly, and with an easy flow of reasons, backed out. In fact, my friend Brigham, was also obliged to relinquish the journey, after he had reached the point of rendezvour, i e. Potosi A residence on the American bottom, in Illinois, the prior summer, had exposed him to the malaria of that otherwise attractive agricultural area, and an intermident fever, which he had thus contracted, forbade his venturing begond the settlements. So that when the appointed day arrived, Enobiti and myself and my good landlord, Ficklin-a warm hearted Kentuckian, who had been a hunter and border spy in his youth, were all the persons I could number, and the latter, only went a short dibtance, out of the gooduess of his heart, and love of forest adventure, to set 4f, as it were, on the way, and intiate us into some oecessary forest arts. It was a bright balmy day, the 6th of November, 1818. The leaven were rapidly filling from the trees, and strewed the road and made a masical rustling among the branches, as we passed the summits of the mine hills, which separated the valley of Mine a Burton from the next adjoining stream. The air had just enough of the autumn freshness in it, to make it inspiring; and we walked forward, with the douhle animation of health
and hope. As we passed through forests where the hickory abounded, the fox and grey squirrel were frequently seen preparing their winter's stores, and gave additional animation to the scene. It was early in the afternoon when we came into the vallay of Batest Creek-it was indeed but a few miles from our starting poing, where our kind Mentor told us, it was best to eacamp; for, in the first place, it was the only apot where we could obtain water for a long distance, and secondly, and more important than all, it was necessary that we should rearrange the load of our packhorse, take a lesson in the art of encamping, and make some oher preparations which were proper, before we plunged outright into the wilderness. This was excellent advice, and proper not only to novices, hut even to the initiated in the woodsman's art. It is always an object, to make, by this initiatory movement, what is technically called a start.

I had purchased at Potosi, a borso-a low priced animal, rather old and bony, to carry our blankets, some light cooking utensils and a few other articles of necessity, and some provisions. He bore the not very appropriate name of "Butcher," whether from a former owner, or how acquired I know not, but he was not of a sanguinary temper, or at least, the only fighting propenaity he ever evinced was to get back to Potasi, as quick as possible, for he ran off the very first night, and frequently, till we god quite far west repeated the attempt The poor beast seemed to know, instinctively, that he was going away from the land of corn fodder, and would bave to sustain himself by picking up his meals out of sere-grass, ofien in sany places, or in some dense and vine-bound cane bottom, where his hind legs would often be bound fast by the green hriar, while he reached forward in vain, to bite off a green leaf.

Here we took the first lesson in duly hobbling a horse-a very necessary lesson: for if no hobbled, he will stray away, and cause great detention in the morning, and if not well hobbled be will injre his legs. We found, near the banks of the stream, a deserted Indian lodge, which appeared susceptible, by a little effort, of affording us a very comfortable night's lodging, and would furhermore, ahould it rain, prove an effectual sheter. This arrangernent we inmediately set about : the horse was unpacked, his burden stowed in the lodge, the horse hobbled and belled, and a fire lit. While my companion arranged the details of the camp, and prepared to boil a cup of tea, I took my gun, and, with but linle ado, shot a number of fine fox and grey squirrelo-being the first fruits of our exertions in the chace. Among them, there was one of decidedly mongrel species. If not, the variety was peculiar. He had a grey body, and a red fory tail, with the belly, nose, and tips of the ears black, thus uniting characterestics of three varieties. One or two of these were added to our supper, which wo made with great satisfaction, and in due time spread out our blankets, and slept soundly till day break.

On sallying out, I found the horse was gone, and sat out in parsuit of
him. Although his fore feet were tethered, so that he must $I$ in $u_{p}$ both together, ho made his way back, in this jumping menaner, to his former owner's door, in the village of Mine a Burion. He had not, however, kept the path, all the way, and tosing his track after he got on the herbage, my ear caugbt the sound of a bell far to the left, which I took to be his, and !ollowed. I pursued the sound of this bell, which was only heard now and then, till after crosesing hill and dale, without devintion from the line of sound, I came out at a farm yard, four miles below Potosi; where I found the bell to be attached to the neck of a stately penned or. The owner, (who knew me and the circumstance of my having set out on the expedition,) told me, that Butcher hed reached the minee, and been sent back, by a son of his former owner, to my camp. I had nothing left, but to retrace my way to the same spor, where I found the fugitive, and sal down to a breakfast of tea, hread, ham and squirrel The whole morning had been lost by this misadventure. It was ten o'clock before we god the animal packed and set forward.

Our second day's jouraey yielded but litte to remark We travelled diligently along a rough mounteinous path, across a serile tract called tha Pinery. This tract is valuable only for its pine timber. It has neither farming land nor mineral wealth. Not a habitation of any kind was passed. We saw neither bird nor animal. The silence of desolstion seened to accompany us. It was a positive relief to the uniform sterility of the soil, and monowny of the prospect, to at length, a valley before us. It was a branch of the Maromeg, or Merrimack, which is called dy itu original French term of Fourche á Courtris. We had travelled a distance of fourteen miles over these finty eminences. The first sigus of haman habiation appeared in the form of enclosed fields. The sun sunk below the hills, as we entered this valley, and we soon had the glimpee of a dweiling. Some woodcock flew up as we hastened forward, and we were no long in waiting for our formal announcement in the loud and long continued barking of doge. It required the stern commands of thair master, before they slunk back and hecame quiet. It was a small $\log$ tanement of the usual construction on the frontiers, and afforded us the usual hospitality and ready accommodation. They gave us warm cakes of corn bread, and fine rich milk. We spread our blankets before an evening's fire, and enjoyed a good night's rest Butcher here, I think, had his last meal of corn, and made no attempt to return. With the cerliext atreaka of day light, we readjusted his pack, and again weat forward.

## CHAPTER II.

Reach a hantar'a cabin on the outakirts of tho wildernes-He agrees to accompany un-Enter the Onark Hills-Encounter an encampment of the Delawara IndianaCharacter of the counury-Its apine air, and the purity of its waters-Ascend to the nource of the Merrimack-Reach a game country-Deserted by the hanler and guide, and abandoned to individual exertiona in theme arta.

Every joint labour, which proceeds on the theory, that each person engaged in it is to render some personal service, must, in order that it may go on pleasandy and succeed well, have a definite order, or rule of progress ; and this is as requisite in a joumey in the wilderness as any where else. Our rule was to lead the pack horse, and to talke the compars and guide ahead, alternately, day by day. It was though, I had the beat ant in striking and making a fire, and when wo halted for the night, always did thin, while my companion procured water and put it in a way to boil for ten. We carried tea, as being lighter and more easy to make than coffiee. In this way we divided, as equally as possible, the daily routine of dutiea, and went on pleasuntly. We had now reached the lars settlement on the frontier, and after a couple of hours' walk, from our last place of lodging, we reached the last house, on the outer verge of the wilderness. It wat a amall, newly erected log but, occupied by a hunter of the name of Roberte, and distant about 20 miles from, and south-west of Poossi. Our approach here was also heralded by doge. Had we been wolves or panthers, creeping upon the promises at midnight, they could not have performed their duty more noisily. Truly this was a very primitive dwelling, and as recent in its structure as it was primitive. Large fallen trees lay about, juet as the axeman had felled them, and partly consumed by fire. The effect of this partial burning had been only to render thess huge trunks black and hideous. One of them lay in front of the cotage. In other places were to be seen deor skibs stretched to dry; and deers feet and antlert lay here and there. There was not a foot of land in cultivation. It was quite evident at first sight, that we had reached the dwelling of a border hunter, and not a tiller of the ground. Bot the owner was absent, as we learned from his wife, a apare, shrewd dark-skinned little woman, drest in buckskin, who issued from the door before we reached it, and welcomed us by the term of "Strangers." Al though this is a western term, which supplies the place of the word "friend," in other sections of the union, and she herself scemed to be thoroughly a native of these latitudes, no Yankee could have been more inquisitive, in one particular department of enquiry, namely the departuent relative to the chace. She inquired our ohject-the course and distance we proposed to travel, and the general arrangementa of horso-
geap, equipage, acc. She told us of the danger of encountering the Osages, and scrutinized our arms. Such an examination would indeed, for its thoroughness, have put a lad to his trumps, who had come prepared for his first quarter's examination at a country acadenty. She wold us, con amore, that her husband would be back soon, -as soon indeed as we could get our breakfast, and that be would be giad to accompany ns, as far as Ashley's Cave, or perhaps farther. This was an opportunity not to be slighted. We agreed to wait, and prepare our morning's meal, to which she contributed some well baked corn cakes. By this time, and before indeed we had been long there, Roberts, eame in. It is said that a hunter's life is a life of feassing or fasting. It appeared to be one of the latter seasons, with him. He had been out to scour the precincts, for a meat breakfast, but came home empty handed. He was desirous to go out in the direction we were steering, which he repreaented to abound in game, but feared to venture far alone, on account of the rascally Osagea He did not fear the Delawares, who were near by. He readily accepted our offer to accompany us as hunter. Roberts, like his forest belp-mate, was clothed in deer skin. He was a rather chunky, stout middle sized man, with a ruddy face, cunning features, and a bright unsteady eye. Such a fellow's final destination would nok be a very equivocal matter, were he a resident of the broad neighbourhood of Sing Sing, or "sweet Auburn:" but here, he was a man that might, perhapa, be trusted on an occasion like this, and we, at any rate, were glad to have his services on the terms stipulated. Even while we were tallcing he began to clean his rife, and adjust his leathern accoutrements: he then put eeveral large cakes of corn bread in a sack, and in a very short time he broughi a stout litale horse out of a $\log$ pen, which served for a barn; and clapping an old saddle on his back and mounting him, with his rifle in one hand, said, "I am ready," and led off. We now had a guide, as well as a hunter, and threw this burden wholly on him. Our course lay up a long ridge of hard bound clay and chert soil, in the direction of the sources of the Marameg, or, as it is now universally called and written, Merrimack. After travelling about four miles we suddeuly descended from an acclivity into a grasey, woodless valley, with a hrisk clear stream winding through it, and several lodges of Indians planted on its borders. This, our guide told us, was the Ozaw Fork of the Merrimack, (in modern geographical parlance Ozark.) And here we found the descendants and remainder of that once powerful tribe of whom William Penn purchased the site of Philadelphia, and whose ancient dominion extended, at the earliest certain historical era, along the banks the Lennapihittuck, or Delaware river. Two of them were at home, it being a season of the year, and time of day, when the men are out hunting. Judging from peculiarity of features, manners and dress, it wonld seem to be impossible that any people, ahould have re-
mained so long in contact with or juxtaposition to the European races, and changed so litule, in all that constitutes national and personal identity. Roberts looked with no very friendly eye upon these ancient lords of the forest, the whole sum of his philosophy and philanthropy being measured by the very tangible circle of prairie and forests, which narrowed his own hunting grounds. They were even then, deemed to have been injudiciously located, by intelligent persons in the west and have long aince removed to a permanent location, out of the corporate limits of the Statea and Territories, at the junction of the river Konga with the Missouri. I should bave been pleased to have lengthened our short balh, hut the word seemed with him and Enobiui to be "onward," and onward we pushed. We were now fairly in the Ozark chain-a wide and almost illimitable trach, of which it may be said, that the vallies only are susceprible of future cultivation. The intervening ridges and mouncains are nearly destitute of forest, often perfectly so, and in almost all csses, sterile, and unfit for the plough. It is probable sheep might be raised on some of these eminences, which possess a sufficiency of soil to permit the grases to be sown. Geologically, it has a basis of limestones, resting on sandstones. Unforunately for its agricultural character, the surface has been covered with a foreign diluvium of red clay filled with chips of horstone, chert and broken quartz, which make the soil hard and compact Its trees are few and stunted; iss grass coarse. In looking for the origin of such a soil, in seems protable to have resulted from broken down slates and shists on the upper Missouri aod below the range of the Rocky Mouncains, in which these broken and imbedded substances originally consituted veins. It is only in the vallies, and occasional plains, that a richer and more carbonaceous soil bas aecumulated. The purest springs, however, gusb out of its hills; its atmosphere is fine aud healthful, and it constitutes a theatre of Alpine attractions, which will probably render it, in future years, the resort of shepherds, lovers of mountain scenery, and valetudinarians. There is another remark to be made of the highland tracts of the Ozark range. They look, in their natural state, more sterile than they actually are, from the effects of autumaal fires. These fires, continued for ages by the natives, to clear the ground for hunting, have had the effect not only to curnil and destroy large vegelation, but ail the carbonaceous particles of the top soil have been burned, leaving the surface in the autumn, rough, red, dry and hard. When a plough comes to be put inw such a surface, it throws up quite a different soil ; and the effects of light, and the sun's heat are often found, as I have noticed in other pars of the west, to produce a dark and comparatively rich soil.

We occupied the entire day in aacending and crossing the ridge of land, which divides the little valley of the Oza from that of the Merrimack. When getting near the latter, the soil exhibited traces of what appeared to be iron ore, but somewhat peculiar in in character, and of dark hue.

This soon revealed itaelf, in passing a short distance, in an abundant locality of black and coloured oxide of mangunese-lying in masses in the arid soil. The Indian trail which we were pursuing led across the vat Jey. We forded the river on foot. No encampments of Indians ware found, nor any very recent traces of them; and we began to think that the accounts of Osage depredations and plundering, must be rather exaggerated. The river pours ite transparem mountain waters orer a wide bed of pebbles and small boulders, and, at this season, offered but little impediment to the horses or ourselves in crossing it. The sun was geuing low, by the time we reached the opposite side of the valley, and wa encamped on its borders, a mile of two above. Here we took dua care of our horses, prepared our evening's meal, talked over the day's advertures, enjoyed ourselves sitting before our camp fire, with the wild wide creation before us and around, and then mank to a sound repose on our palles.

Novices in the woodman's arr, and raw in the business of travelling, our sleep was sounder and more death-like, than that of Roberts. Hia bye had shown a reaslessness during the afternoon and evening. Wo were now in a game country, the deer and elk began to be frequently seen, and their fresh tracks across our path, denceed their abundance. During the night they ventured about our camp, so es to diaturb the enso of the weary huater, and indeed, my own. He got up and found both borses missing. Bucher's memory of Mine a Burton corn fodder had not deserted him, and be took the hunter's horse along with him. I jumped up, and accompanied him, in their pursuit They were both overtaken about three miles back on the track, making all poasible speed homeward, that their tethered fore lege would permit We conducted them back, without diaturbing my companian, and he then went out with his rife, and quiclly brought in a fine fat doe, for our brealfast. Each one cut fine pieces of steaks, and roasted for himself We ate it with a little salh, and the remainder of the hunter's corn cakes, and finished the repast, with a pint cup each, of Enobitti's best lea. This turned out to be a finate meal with our Fourche à Courtois man, Roberts: for the rascal, a few hours afterwards, deserted us, and went back Had he given any intimation of dissatisfaction, or a desire to return, we should have been in a measure prepared for it. It is probable his fears of the then prevalent bugbear of those froatiersmen, the Osages, were greater than our own. It is also probablo, that he had no other idea whatever, in leaving the Fourche a Courtois, than to apail himself of our protection till he could get into a region where the could shoot deer enough in a single morning to loed down his horse, with the choicest pieces, and lead him home. This the event, at least, rendered probable; and the fellow not only deserted us meanly, hut he carried off my best new hunting kuife, with scabbard and belh-a loss not easily repaired in such a place.

To cloak his plan, he set out with us in the morning: it had rained a little, during the latter part of the night and was lowering and dark all the morning. After travelling about ten milea, we left the Osage trail, which began to bear too far north-west, and struck through the woods in a soulh course, with the view of reaching Ashley's Cave on one of the head streams of the river curreats. Soon after leaving this trail, Roberts, who was in advance on our left, about half a mile, fired ab, and killed, a deer, and immediately re-loaded, pursued and fired again ; telling us to continue on our course, as he, being on horseback, could easily overtake us. We neither heard nor saw more of him. Night overtook us near the banks of a small lake, or rather a series of litde lakes or ponda, communicating with each other, where we encamped. After despatching our supper, and adjusting, in tall, the day's rather eventifl incidents, and the morrow's plan of march, we commited ourselves to rest, but had not sunk into forgetfulpess, when a pack of wolves set up their howl in our vicinity. We had been told that these animals will not approach near a fire, and are not ar be dreaded in a country where deer abound. They follow the track of the hunter, to share such part of the carcass as he leaves, and it is their nature to herd rogether and run down this animal as their natural prey. We slept well, hut it is worthy of notice, that on awaking about day break, the howling of the wolves was still heard, ind at about the same distance. They had probably serenaded us all night Our fire was nearly out; we felt some chilliness, and determined to rekindle is, and prepare our breakfast before setting forward. It was now certain, that Roberts was gone. Luckily he had noc carried of our compass, for that would have been an accident fatal to the enterprise.
(To be conlinued.)

NOCTURNAL LIGHT ON INDLAN GRAVEA
Some of the northern tribes of Algonquin origin, build a small fire on newly nunde graves for four nights after the interment. This was an ancient custom. The reason assigned is, that there is a journey of four days to the land of spirits, and if this symbolic fire be made, the disembodied sonl is saved the necessity of kindling a fire at its nightly encampmenta
gtandard of Value dn kude nations.
In 1821 the commanding officer of the fort at Chicago, authorized a reward of thiry dollars to be offered for the apprehension of a deserter. The matter was communicated to the Pottowattomies, who scon broughs in the fugitive and claimed the reward. Thirty dollars was, however, a sum which brought no definite idea to their minds. There were five claimants to divide the reward amongst They immediately sat down, and hy the aid of an interpreter reduced it into racoon skins, and divided the number into five parts. It was not till this had been done, that they comprehended the true value of the reward.

## ETHNOLOGY.

#### Abstract

GCHOOLCRAFT'S AMERICAN CYCLOPEDIA, OR ETHNOLOGICAL GAZETTEER OF THE INDIAN TRIBES OF THE AMERICAN CONTINENT, NORTH AND SOUTH, COMPRISING THEIR HISTORY, GEOGRAPHY, AND NOMENCLATURE, FROM THE DISCOVERY IN 1492, TO THE PRESENT PERIOD.

## ADVERTISEMENT.

A phospectus for this work was issued in 1842. While the title is slightiy modified, the design and plan of its execution have not been essentially changed. The principal nbject aimed at, under the general idea of the history and geography of the Aboriginal Race, is to furnish a general and standard reference-book, or short encyclopadia of topics relative to the entire race, alphabetically arranged. By the insertion of the name of each family of tribes, nation, sub-tribe, or important clan, the occasion will be presented of noticing the leading or characteristic events, in their history, numbers, government, religion, languages, arts or distinctive character.

Where the scene or era of their expansion, growih and decay has been so extensive, embraciag as it does, the widest bounds and remotest periods, their antiquities have also called for a possing notice. Nor coutd any thing like a satisfactory accomplishment of the pian be effected, without suecinct notices of the lives and achievements of their principal chiefs, rulers, and leading personages.

Language is an important means of denoting the intricate thread of history in savage nations. Mr. Pritchard coasiders it more important than physiological arructure and peculiarities. It is, at least, found often to reveal ethnological affinities, where both the physical type, and the light of uradition, afford but little aid. The words and names of a people, are $\mathbf{s o}$ many clues to their thoughts and intellectual structure; this brunch of the subject, indeed, formed the original germ of the present plan, which was at first simply geographical, and has been rather expanded and built upon, than, if we may so say, supplied the garniture of the edifice. In a clase of transpositive languages, which are very rich in their combinations, and modes of concentrated descriprion, it must needs happen, that the names of places would often recall both associations and descriptions of deep
interest in contemplating the fate and fortunes of this unfortunate race. Without intruding upon the reader diequisitions which would be out of place, no opponunity has been omitted, from the consideration of their names, to throw around the sites of their former or present residence, this species of interest
But half the work would have been done, it is conceived, to have confioed the work to North America ; and it must necessarily have lost, hy such a limitation, more than half its interest We are just beginning in truth to comprebend the true character and bearing of that unique type of civilization which existed in Mexico, Peru, and Yucatan. The rude hand with which these embryo kingdoms of the native race were overturoed, in consequence of their horrid idolatries, necessarily led to the destruction of much of their monumental, and so far as their picture writing reached, some of their historical materials, of both of which, we now feel the want It is some relief, to know, as the researches of Mr. Gallatin, which are now in progress, demonstrate, that hy far he greatest amount of the ancient Mexican picture writings, as they are embraced in the elaborate work of Lord Kingsborough, relate to their mythology and superstitions, and are of no historical value whatever. And if the porions destroyed in the Mexican and Peruvian conquests, were as liherally interapersed with similar evidences of their wild polytheism, shocking manners, and degraded worship, neither chronology nor history have so much to lament.

The early, strong and continued exertions which were made by the conquerors to replace this system of gross supersition and idolatry, by the Romish ritual, filled Mexico and South America with missions of the Catholic Church, which were generally under the charge of zealous, and sometimes of learned and liberal-spirited superintendants, who have accumulared facts respecting the character and former condition of the race. These missions, which were generally spread parallel to the sea coasts of the Atlantic and Pacific, reaching inland along the banks of the great rivers and plains, have confcssed!y dooe much to ameliorate the manners and condition of the native race, to foster a spirit of industry, and to entighten their minds. Still, it is scarcely known, that numerous and powerful tribes, stretching through wide districts of the Andes and the Cordilleras, never submitted to the conqueror, and yel exist in their original state of barbarism.

In this deparment of inquiry, the geographical and historical work of De Alcedo, which, so far as the Spanish and Portuguese missions are concerned, is both elaborate and cormplete in ise details, has been taken as a basis. No one can write of Souch America and its native tribes, without reference to Humbold. Other standard writers have been consulted, to give this part of the work as much value as possible, not excepting the latest voyages end travels The design has been, without aiming at too
mach, to compres a body of leading and characteristic facts, in the shortest practicable compass, which should, at the same time, present an ethoological view of the various families and groups of the race.
In each deparment of inquiry, which admitted of it, the author has availed himself of such sources and opportunities of personal observation and erperience, as his long residence in the Indian territories, and his study of the Indian hiswry have afforded. And he is not without the hope, that his inquiries and pearchee on this head may be found to be sach as to merit approval

## A.

$\mathrm{AB}_{\text {, often }}$ pronounced with the sound of we, before it,-e particle which, in geographical names, in the family of the Algonquin dialecte, denotee light, or the east It is also the radix of the verb wab, to see, as well as of the derivatives, a-tb, an eyeball, and wabishka, a white subetance, dce., -ideas which either in their origin or application, are closely allied.

Abacabis, a selllement of Indians in the Poruguese possessions of the province of Amazon. These people derive their name from a lake, upon which they reside. It is a peculiarity of this lake, that it has its outlet into the river Madiera which, after flowing out of the province turne about and again enters ic, forming, in this involution, the large and fertile island of Topanambes. This tribe is under the inssraction of the Carmeliten They retain many of their early peculiarities of manners and modes of of life. They subsist by the cultivation of maize, and by taking fish in the waters of the Abacatis; or Abacactes in addition to these means, they rely upon tropical fruite. The latest notices of them come down to 1789. But little is known of their numbers, or present condition.
Araches, or Apaches, an erratic tribe of Indians, who infent the prairiea of westeru Temsas and New Mexico. They are supposed hy some, to consist of not less than 15,000 souls. They are divided into petty bends, known under various names. They are the most vagrant of all the wild hanter tribes of the general area denoted. They do not live in fired abodes, but shift about in search of game or plunder, and are deamed a pest by the Santa Fe traders. They reise nothing and manafacture nothing. Those of them who are east of the Rio del Norte, subaist on the baked roct of the mauguey, and a similar plant called Mezcal, and hence they are called Mezcaleros.

Another division of them, and by far the greatest, rove west of that ascam, where they are called Coyoteros, from their hahit of eating the coyote, or prairie woll. They erteod west into California and Sonore They bear a bed character wherever they are known If on the outakinta
of the ranchos and haciendas, they steal cattla and sheep. If on the wide and destitute plains which they traverse, they thieve and murder. Sometimes they are pursued and punished; more frequently, they escape. The Mexican authorities keep some sort of terms with them by treaties, which the vagranta, however, break and disregard, whenever they are excited by hunger, or the lust of pluader. For Indians bearing the name, formerly from the U. States, see A paches.

Abaco, one of the Baharaa islands. The nativetinhabitants of this, and the adjacent groupes of islands, were, early after the discovery, transported to the main, to work in the mines. In 1788 this island, known to nautical men as the locality of the Hole in the Wall, had a population of 50 whites, and 200 Africans.

Abacooche, or Coosa, a otream rising in Georgia. It flows into Alabaria, and after uniting with the Tallapoosa, a few miles below Wetumpla it forms the Alabams river. The word is, apparently, derived from Oscooche, one of the four bands into which the Muscogees, were anciently divided.

Abanaree, or Eastlanders, a distinct people, consisting of a plurality of tribes, who formerly occupied the extreme north eastern part of the United States. The word is variously writen by early writers. See Abenakies, Abernaquis, Wabunakies.

Abakcay, the capital of a province of the esme name 20 leagues from Cuzco, in Peru. It is memorable for the victories geined in the vicinity hy the King's troops in 1542 and 1548 against Conzalo Pizarro. It lies in a rich and spacious valley, which was inhabited by the subjecta of the Inca, on the conquest.

Abagca, or Rabasca, a popular corruption, in the northwert, of Athsbasca, which see.

Abanes, an unreclaimed nation of Indians, living in the plains of SL Juan, to the north of the Orinoco, in New Grenada They are of a docile character, and good disposition, lending a ready ear to instruction, but have not embraced the Catholic religion. They inhahit the wooded shores of the river, and shelter themselves from the effects of a tropical sun, in the open plains, by erecting their habitations in the small copse-wood. They are boonded towards the west, by the Andaquies and Caberras, and ear hy the Salivas.

Abangors, a large setlement of the Guarani nation of Indians, on the ahores of the river Taquani, in Paraguay. This stream and its inhabitants were discovered by A. Numex, in 1541.

Abscoochi, bee Abacooche.
Abeicas, an ancient name for a tribe of Indians, in the present erea of tha United States, who are placed in the earlier geographies, south of the Alabamas and west of the Cherokees. They dwelt at a distance from the large rivers, yet wers located in the districts of the cane, out of the hard
subetance of which they made a kind of knife, capable of answering the principal purposea of this instrument They were at eamity with the Iroquois.

Aberakies, a nation formerly inhabiting a large part of the territorial area of the states of New Hampshire and Maine. There were several tribes, of this nation the principal of which were the Penobscots, the Norredgewocke, and the Ameriscoggins. They were at perpetual boetilities with the New England colonists. They bad received missionaries, at an early day, from the French in Canada, and acted in close concert with the hostile Indians from that quarter. At length in 1724, the government of Massachussetrs organized an effective expedition against them, which ascended the Kennebec, attacked the chief town of the Norredgewocks, and killed a large number of their bravest warriors. Among the slain, was found their missionary Sebastian Rasle, who had taken up arms in their defence There whas found, among bis papers, a copioua vocabulary of the language, which has recently been published under the supervision of Mr. Pickering. In the year 1754, all the Abenakies, except the Penobscots, removed into Canada. This nation had directed their attention, almost exclusively, to hunting. At the mouth of the Kennebec they absolutely planted nothing. Their lauguage, as observed by Mr. Gallatin, has strong affinities with those of the Etchemins, and of the Micmacs, of New Branswick and Nova Seotia; there are fewer resemblances in its vocabulary to the dialects south of them This nation appears to have been called Tarrenteens, by the New England Indians. Their generic name for themselves, if they had one, is unknown. The term Abenakie, is one manifestly imposed by Algonquin tribes living west and south of them. It is derived from wabanung, the eart, or a place of light, and akee, land

Aberas, a name applied, so late as 1750 , to a band of the Muscogees, living on the river Tombigbee, within the present area of Alaboma.

Abernaquis, a settlement of the expatriated Abenakies of New England, in Lower Canada. They subaist themselves at this time in a great measare by agriculture, and manifert a disposition to improve. From a report made in 1839 by the American Board of Foreign missions of Booton who employ a missionary and teacber among them, sixty persons attend Protestant worahip, of which nurnber, 24 are church membera Twenty of the youth aterd a daily sebool

Abciras, an Indian mission formerly under the charge of the order of Jesuits, in the governmental department of Quito. It is situated on the river Curasari, 30 leagues from ins mouth, and 240 from Quito. It wat foanded in 1665 by father Lorenzo Lucero.

Abifgas, or Wabingas, a name for a band, or tob-triba of the River Indians, of the Mohegan, or Mohekinder stock, who formerly inhabited the present area of Dutcheas county, N. Y., and some adjacent parts of the eastera shores of the Hudson, above the Highlands.

AbIfones, an unreclained nation of Indians, who inhabit the south shores of the river Bermejo, in the province of Tucuman, Buenos Ayree. This nation is said, perhape vaguely, to have formerly numbered 100,000 souls, but was, at the lest accounts, about A.D. 1800, much reduced. They present some peculiar traits, living as nearly in a atate of nature as possible. The men go entirely naked, subaisting themselves by hunting and fishing, and passing much of their time in idleness or war. The women wear litule ornamented skins called queyapi. Physically, the people aro well formed, of a lofty stature and bearing, robust and good featured. They paint their bodies profusely, and take great pains to inspire hardihood. For this purpose they cut and scarify themselves from childhood; they esteem tiger's flesh one of the greatest dainties, believing its properties to infuse strength and valor. In war they are moat cruel, sticking thair captives on the top of high poles, where, exposed to the seorching rays of the sun, they are left to die the most horrid death.

They have no knowledge of God, of laws, or of policy, yet they believe in the immortality of the soul, and in a land of future bliss, where dancing and diversions shall prevail. Widows obeerve celibacy for a year, during which lime they abstain from fish. The females occupy themselves in sewing hides, or spinning rude fabrics. When the men are incoricateda prevalent vice-chey conceal their husbands' knives to prevent assassinations. They rear but two or theee children, killing all above this number.

Abrsca, an extensive mountainous territory of Pery, lying between the Yetau and Amoramago rivers, east of the Andes, noted from the earlies limes, for the number of barbarous nations who occupy it It is a wibd and picturesque region, abounding in forests, lakes and streams, and affording facilities for the chase, and means of retreat from civilization, so congenial to savage tribes. An attempt to subjugate these fierce tribee mode by Pedro de Andia in 1538, failed. The same result had attended the efforts of the emperor Y upanqui.

Abitanie, a mouatain in the province of Lipas, in Peru. In the Quetchaan tongue, it signifies the ore of gold, from a mine of this metal, which is now nearly abandoned.

Abititis, the name of one of the tributaries of Moose River, of James' Bay, Canade Also a small lake in Cenada West, near the setulement of Frederick, in north latitude $48^{\circ}, 35^{\circ}$ and west longitude $82^{\circ}$ : also, a lake north of lake Nepissing, in the direction to Mooee Fort. It is a term, apparently derived from nibee, water, and wah, light

Abrtioas, a fieree and warlike nation of Indians, in the province of Tarma in Peru, of the original Quetche stock They are situated 60 leagues to the east of the Andes. They are barbarians, roving from place to place, without habite of industry, and delighting in war. They are numerous, as well as warlike; bus like all the non-agricultural tribee of
the region, they are oflen in want and wretchedness. They are bounded on the south by their enemies the Ipilcos.

Abo, Abovor Micrabo, or the Great Hare, a personage rather of mythological, than historical note, in the traditions of the Lake Algonquin tribes. It is not clear, although probable, that he is to be regarded as identical rith Manabosho, or Nanabosho.
Aboreec, a celebrated war and hereditary chief of the Chippewa nation, who flourished during the last century; more commonly written Wabojeeg, which see.

Abrahaw, a chief of the Mohawks, who, afer the fall of king Hendrick, 30 ealled, at the batile of lake George, in 1755, between the English and French armies, became the ruling chief of that nation. He was the younger brother of Hendrick, and lived at the lower Mohnwk Castle. He was of small stature, but shrewd and active, and a fluent speaker. Numbers of his speeches are preserved, which he delivered, as the ruling chief of his tribe, in warious councils, during the stormy era of 1775 , which eventuated in the American revolution. In the events of that era, his bame soon disappears: as be was then a man of advanced years, he probably died at bis village. It in not known that he excelled in war, and, at all events, he was succeeded, about this cime, in fame and authority, by a new man in the chieftainship, who rose in the person of Thyendanegea, better known as Joseph Brant. Abrahams, or liale Abraham, as he was generally called, appears from his speeches and policy, to have thoroughly adopted the sentiments and policy of Bir William Johnson, of whom, with his tribe generally, he was the friend and admirer. He was, as his peeches disclose, pacific in his viewt, cautious in policy, and not inclined, it would seem, to rush headlong into the great contest, which was then brewing, and into which, his popular successor, Brant, went heart and hand. With less fame than his elder brother Hendrick, and with no warlike reputation, yet without imputation upon his name, in any way, he deserves to be remembered as a civilian and chieftain, who hore a respectable rank; as one of a proud, high spirited, and important tribe. Little Abrsham was present at the last and final council of the Mobnwks, with the American Commissioners, at Albany, in September 1775, and spoke for them on this occasion-which is believed to have been the last peaceable meeting between the Americans and the Mohawk tribe, prior to the war.
(To be contiraced)

Before a man dies, he is partly dead. His hearing is faint-his sight is gone-his foelings are blunted-his whole nervous system is, in effect, paralysed; and the process of the extinction of life comes on 80 gradually and imperceptibly, both to himself and the bystanders, that the latter are sometimes in doubt of the precise moment when the vital apark fled

## TRANSLATION.

1. Great good author of Life, Gezha Monedo, abiding in the heerens.
2. Thou hast made all thing 9 .
3. Thou ant the giver,-Thou, the everlasting preserver of life.
4. Thou hast guarded me, by day and by aight
5. Thou hast made the sun and moon, and the stare.
6. Thou makest the rain, the thunder, the hail, and the snows.
7. Thou didet make man to seand upright, and has placed him over all thas is on the earth
8. Thou bast given us souls, that will never dic. Thou hast sent thy son Jeaus Christ to die for us.
9. Continually are our thoughes evil, and truly, our words are evil continually.
10. Verily, we deserve punishment with the Spirit of Evil
11. Show pity on us, Gezha Monedo.
12. Show pity on us, Jesus Chriad
13. Reform our wicked hearta.
14. Give us new hearta.
15. May we love thee with all our hearts, and by our actas obey thy precopts, (or sayings.)
16. Give us hears to delight in prayer.
17. Show mercy to all our kindred, unishenaubaig, or common people, (means exclusively the Red Men.)'
18. Show mercy to all who live on the earth.
19. Pity us, and befriend us, living and dying.
20. And receive our souls to thyself.
21. Ever to dwell in thine abiding place of happiness.
22. Not in our own frail strength of life, do we ask this ; but alone in the name of Jesus Christ
23. Grant us thy mercy, in the name of thy Son. So be it over.

Those whotake an interest in the structure of the Indian languages, may regard the above, as an improvised specimen of the capacity of this particular dialect for the expression of scripture truch. The writer, who from early years was a member of the church, had made a translation of the Lords prayer, and, occasionally, as delicate and declining health permited, some other select pieces from the sacred writinge, and hymns, of which, one or two selections may, perhapa, hereater be made.

The distinction between the active and passive voice, in the Odjibwn language, is formed by the inflection ego.

| Ne sagreau, | I love. |
| :--- | :--- |
| Ne sageauego, | I am loved. |

## NAMES OF THE EEABONS

The following are the names of the four seasons, in the Odjibwa tonguo:

| Pe-bon, | Winter, | From Kone, | Snow. |  |
| :--- | :--- | :---: | :--- | :--- |
| Se-gwun, | Spring, | $«$ | Seeg, | Running water. |
| Ne-bin, | Summer, | $"$ | Anib, | A leaf. |
| Ta-gwá-gi, | Auturna, | $"$ | Gwag, | The radir of behind \&cc. |

By adding the letter $g$ to these terms, they are placed in the relation of verbs in the future tense, but a limited future, and the terms then denote next winter, \&c. Years, in their account of time, are counted by winters. There is no other term, but pe-boan, for a year. The yerr consists of twelve lunar months, or moons. A moon is called Geezis, or when spoken of in contradistinction to the sun, Dibik Geezis, or night-sun.

The cardinal points are as follows.

| (a) | North, | Ke wá din-ang. |
| :--- | :--- | :--- |
| (b) | South, | O sha wan-ung. |
| (c) | East, | We bun-ung. |
| (d) | West, | Ká be un-ung. |

a. Kewadin is a compound derived from Ke-wa, to returm, or come home, and nodin, the wind. b. Oshauw is, from a root not apparent, but which produces also ozau, yellow, \&c. c. Waban is from ab, or wab, light d. Kabeun, is the name of a mythological person, who is spoken of, in their fictions, as the father of the winds. The inflection ung, or oong, in each term, denotes course, place, or locality.

There is no generic word in the Indian languages, except the plural for man, to designate mankind. The term for their own race, amongthe Algonquin stocks, is Iawba, or Iaba, a male. They prefix to this, the adjective term unish, meaning common or general. The compound phrase thus formed, namely unish-in-aba, is their term for the entire Re Race. Nearly the same meaning is attached to the ancient, and somewhit mysified term of the Delawares, Lenni-lenape. Put the interchangibles 1 form, and $b$ for $p$, and the two words are assimilated. This assimilation would be complete, had not the latter, to designate the race, taken the Indian word for man instend of that for common, as the first member of the term. A writer in the North Armerican Review, contends, indeed, that "linne,": or "linno," means "common," and is not the equivalent of inine, as wa suppose. And if so, the two terms are ideatical in meaning.

[^12]
## 

OR

## THE RED RACE OF AMERICA.

## PART TIIIRD.

## PERSONAL INCIDENTS AND IMPRESSIONS OF THE INDIAN RACE, DRAWN FROM NOTES OF TRAVEL AND FESIDENCE IN THEIR TERRITORIES.

## CHARACTER OF THE RED MAN OF AMERICA.

Inavat 1-What kind of a boing is the North American Indian 1-Have we judged righly of him?-What are bis pecaliar traits, his affections, and his intellemand qualtien ?-Is he mach infuenced by hia religion, his mode of government, and his complicated lout funge.

My earlies impressions of the Indian race, were drawn from the fireside rehearsals of incidents which had happened during the perilous times of the American revolution; in whioh my facher was a zealous actor, and were all inseparably connected with the fearful ideas of the Indian yell, the tomahawl, the scalping knife, and the fire brand. In these rocitals, the Indinn was depicted as the very impersonation of evil-a sort of wild demon, who delighted in nothing so much as blood and murder, Whether he had mind, was governed by any reasons, or even had any soul, nobody inquired, and nobody cared. It was always represented as a meritorious act in old revolutionary reminiscences, to have kitled one of them in the border wars, and thus aided in ridding the land of a cruel and nanatural race, in whom all feelings of pity, justice, and mercy, were supposed to be obliterated. These early ideas were sustained by printed narratives of captivity and hnir-breadth escapes of men and women from their clutches, which, from time to time, fell into my hands, so that long before I was ten years old, I had a most definite and terrific idea impressed on my imagination of what was sometimes called in my native precincte, " the bow and arrow race."

To give a definite conception of the Indian man, there lived in my native valloy, a famity of Indians of the Lroqnois stock, who often weot off
to their people in the west, and as often returned again, as if they were a troop of genii, or the ghoscs of the departed, who came to baunt the nut wood forests, and sub-vallies of the sylvan Tawasenthaw, which their ancestors had formerly possessed, and to which they still claimed some right. In this family, which was of the Oneida tribe, and consisted of the husband and wife, with two grown up sons, I first gav those characteristic features of the race,-namely, a red skin, with bright black eyes, and black straight hair. They were mild and docile in their deporment, and were on friendly terms with the whole settlement, whom they furrished with neatly made baskets of the linden wood, split very thin, and coloured $t 0$ impart variety, and with nice ash brooms. These fabrics made them welcome guests with every gwod housewife, who had forgoten the horrific stories of the revolution, and who was ever ready to give a chair ar i a plate, and a lodging place hy the kitchen fire, to poor old Isaac and Anna, for so they had been named. What their original names were, nobody knew; they had lived so long in the valley that they spoke the Dutch language, and never made use of their own, except when talking together; and I recollect, we thought it a matter of wonder, when they discoursed in Indian, whether such a guttural jargon, could possibly be the medium of conveying any very definite ideas. It seemed to be one undistinguished tissue of hard sounds, blending all parta of speech together.

Had the boys of my own age, and I may say, the grown people, stopped to reflect, and been led to consider this family and their race in America, independently of their gros acts, under the atrong excitements of war and revenge, goaded by wrongs, and led on by the class of revolutionary tories, more implacabie than even themselvea, we must have seen, in the peaceable lives, quiet manners, and benevolent dispositions of these four people, a contradiction to, at least, some parh of the sweeping conclusions above noticed. But no such thoughte occurred. The word "Indian," wes synonymous then, as perhaps now, with half the opprobrious epithers in the dictionary. I recollect to have myself made a few lines, in early life, on the subject, which ran thus:-

> Indians they were, ere Colon cromed the ma, And agm hence, they ahall but Indians be.

Fortunately I was etill young when my sphere of observation was enlarged, by seeing masses of them, in their native forests; and $I$, afler a few yeara, assumed a position as government agent to one of the leading tribes, at an age when opinions are not too firnly rooted to permit change. My opinions were still, very much however, what they had been in boyhood. I looked upon them as very cannibals and blood-thirsty fellows, who were only waiting a good opportunity to knock one in the head. But I regarded them as a curious subjeet of observalion. The remembrance of poor old Lsac, had shown me that there was some fealing and humanity in their
breasts. I had seen many of them in my travels in the west, and I felt inclined to inquire into the traits of a people, among whom my duties had placed me. I had, from early youth, felt pleased with the study of natural history, and I thought the Indian, at least in his langunges, might be studied with something of the same mode of exactitude. I had a strong propensity, at this time of life, for analysis, and I believed that something like an analytical process might be applicd to enquiries, at least in the deparment of philology. Whenever a fact occurred, in the progress of my official duties, which I deemed characteristic, I made note of it, and in this way preserved a sort of skeleton of dates and events, which, it was believed, would be a source of useful future reference. It is, in truth, under advantages of the kind, that these remarks are commenced.

The author has thrown out these remarks, as a starting point. He has mado observations which do not, in all respects, coincide with the commonly received opinions, and drawn some conclusions which are directiy adverse to them. He has heen placed is scenes nad circumstances of raried interest, and met with many characters, in the course of four and twenty ycars' residence and travel in the wilds of America, who would have struck any observer no original and interesting. With numbers of them, he has formed an intimate acquaintance, and with not a few, contracted lasting friendships. Connected with them by a long residence, by the exercise of official duties, and by still more delicate and sacred ties, he has been regarded by them as one identified with their hiatory; and received many marks of their confidence.
aste Indinns, viewed as a distinct branch of the human race, have some Winar trais and institutions, from which thcir history and cbaracter may be advantageonsly studied. They hold some opinions, which are not easily discovered by a stranger, or a foreignor, but which yct exert a powerful influcnce on their conduct and life. There is a subtlety in some of their modes of thought and belief, on lifo and the existence of spiritual and creative power, which would seem to have been eliminated from some intellectual crucible, without the limits of their present sphere. Yeh, there is much relative to all the common concerns of life, which is peculiar to iL The author bas witnessed many practices and observances, such as travellers have often noticed, hut like others, attributed then to accident, or to some cause widely different from the true one. By degrees, he bas been admitted into their opinioos, and if we may so call i, the philosophy of their minds; and the life nf an Indian no longer appears to him a mystery. He sees him acting, as other men would act, if placed exactly in his condition, prepared with the education the forest has given him, and sortounded with the same wants, temptations and dangers.

The gentler affections are in much more extensive and powerful exercive omong the Indian race, than is generally believed, although necessari) developed with leas refinement than in civilized society. Their pater-
nal and fraternal affections, have long been known to be very strong, as well as their veneration for the dead. It has been bis province in these departmenta, to add some striking exnmples of their intensity of feeling and affection, and truthfulness to nature.

The most powerful source of influence, with the Red man, is his religion. Here is the true groundwork of his hopes and his fears, and, it is believed, the fruitful source of his opinions and actions. It supplies the system of thought by which he lives and dies, and it constitutes, indeed, the basis of Indian character. By it he preserves his identity, as a barbarian, ona when this is taken away, and the truo system substituted, he is atill a Red Man, but no longer, in the popular sense, an Indian-a barbarian, a pagan.

The Indian religion is a peculiar compound of rites, and doctrines, and observances, which are early taught the children by precept and example. In this respect, every bark-buitt village is a temple, and every forest a school. It would surprise any person to become acquainted with the variery and extent to which an Indian is influenced by his religious views and superstitions. He takes no important step without reference to it It is his guiding motive in peace and in war. He follows the chace under its influence, and his very amusements take their tincture from it. To the author, the facts have been developing themselves for many ycars, and while he is able to account for the peculiar differences between the conduct of Indians and that of white men, in given cases, he can easily perceive, why the later have so often been unable to calculate the actions of the former, and even to account for them, when they have taken place. It may be here remarked, that the civilized man, is no less a myserious and unaccountahle heing to an Indian, because his aprings of action are alike unintelligible to him.

If the following pages shall afford the public any means of judging of the Red Race, with greater accuracy, he hopes they may lead to our treating them with greater kindness and a more enlarged spirit of justice. The change which has been wrought in his own mind, by the facts he has wituessed, has been accompanied by a still more important one, os to their intellectual capacities and moral susceptibilities, and their consequent claims on the philonthropy of the age. As a class of men, it is thought their native speakers, without Ietters or education, possess a higher scope of thought and illustration, than the corresponding class in civilized life. This may be accounted for, perhaps, from obvious erternal causes, without impugning the actual native capacity of the lower, although educated classes of civilized life. Still, it is a very striking fach, and one which has very ofien forced itself on the attention of the author. The old ides that the Indian mind is not susceptible of a high, or an advantageous developement, rests upon questionahle data. The two principal causes, which have prolonged their continuance in a state of barbarism, on this continent,
for so long a period, are a falae religion, and false views of government. The first has kept back social prosperity and impeded the rise of virtue. With respect to governmenu, during all the time we have had them for neighbours, they may be said to have had no government at all. Personal independence, has kept the peuy chiefs from forming confederacies for the common good. Individuals have surrendered no part of their original private rights, to secure the observance of the rest There has been no public social organization, expressed or implied. The consequence has been that the law of private redress and revenge prevailed. In the only two cases where this system was departed from, in North America, nemely that of the Azteek empire, and of the Iroquois confederacy, there whas no lack of vigour to improve The resuls were a constanly increasing power, and extending degree of knowledge ap to the respective eras of their conquest It was nox want of mental capacity, so much as the non-existence of moral power, and of the doctrines of truth and virtue, that kept them back; and left our own wandering tribes, particularly, with the bow and the spear in their hands. He believes, that their errors, in these particulars, may be pointed out, without drawing conclusions adverse to their political or mcial prosperity, under better auspicies, and without attributing such failures to mental imbecility.

The mode of recording thought, among these tribes, by means of picorish signs, and maemonic symbols, has atracted particular attention, and pives the author hopea, that he has been enabled to collect, and bring forCid a body of facts, in this department, which will recommend themby their interest and novelty. Confidence, inspired by long reaidease in their territories, revealed to him another trait of character, in the existence among them of a traditionary imaginative lore, which is repeated from father to son, and has no small influence upon their social condition. It is in these two departments, tha, he believes, he has opened new and important means of judging of the Indian character, and discovered the sources of view and opinions, on many subjects, which had escaped previous inquirers.

There is one more poinh, to which he will here invite a momentary attantion, and which, albough not usually enuraerated as among the practical causes that influenced Indian society and character, is yet believed to exercise a strong, hough silent sway, both upon the question of the mental character, and its true development. The author alludes to the topic of their languages. Some of the most venerated writers present a theory of the origin of national government languages and institutions, difficult or impossible to be conformed with the nature of man in society, and unsupported by such evidence as their doctrines require. Such, he regards, the theory of the "social compact," except it be viewed in the most undefined and general sense possible Such, also, is the theory of the origin and improvement of languages. The system of government gene-
rally prevailing among the Indian tribes, is indeed so simple and natural, under their circumstances, that it is thought no person would long seek for the traces of any great legislator, giving them lass in any past period. When, however, we consider the curious structure of their languagea, we find an ingenuity and complexity, far surpassing any theory to be discovered in that of the modern languages of Europe, with, perhape, some exceptions in the Basque and Majyer, and even beyond any thing existing in the Greek. As the latter has long been beld up as a model, and the excellencies of its plan attributed to some unknown, hut great and sagacious, learned and refined mind, we might feel justified in assigning the richness of forms, the exceeding flexibility, and the characteristic beauvies and excellencies of the Indinn tongues, to a mind of far superior wiodom, ingenuity, and experience. Yet bow perfectly gratuitous would this be! All history bears testimony against the buman inveation and designed alteration of language ; and none but a mere theorist can ever embrace the idea that it is, or ever was, in the power of any man, to fabricate and introduce a new language, or to effect a fundamental change in the groundwork of an existing one. This, at least, is the decided opinion of the author ; and he firmly believes, that whoever will contemplate the subject, amidst such scenes as he has been accustomed to, will inevitably come to the same conclusion. He bas seen changes in dialects commenced and progressive, and indications of others going on, but these owed their origin and impulse to accidental circumstances, and were not the result of any plan or desigu. They were the result of necessity, convenience, or caprice. These three causes, that is to say, necessity convenience and caprice, if properly examined and appreciated in their influence, and traced with care to their effecta, will develop the origin of many things, whose existence has been sought at too great a distance, or amidst too much refinement.

Books, and the readers of books, heve done much to bewilder and perplex the study of the Indian character. Fewer theories and more observation, less fancy and more fact, might have brought us to much more correct opinions than those which are now current. The Indian is, after all, believed to be a man, much more fully under the influence of common sense notions, and obpious cevery-day motives of thought and action, hope and fear, than he passea for. If be daes not come to the same conclusions, on passing questions, as we do, it is precisely because he sees the premises, under widely different circumstances. The admitted errors of barbarism and the admitted truths of civilization, are two very different codes. He is in want of aimost every source of true knowledge and opinion, which we possess. He bas very imperfect notions on many of those branches of knowledge in what we suppose him best informed. He is totally in the dark as to others. His vague and vase and dreamy nolions of the Great Author of Existence, and the mode
of his manifestations to the human race, and the wide and complicated system of superstition and transcendental idolatry which he has reared upon this basis, place him, at once, with ail his sympathies and theories, but of the great pale of truth and civilization. This is one of the leading circumstances which prevents him from drawing his conclusions as we draw them. Placed under precisely similar circumstances, we should perhaps coincide in his opinion and judgments. But aside from these erroneous views, and afler making just allowances for his ignorance and moral depression, the Indian is a man of plain common sense judgmont, acing from what he knows, and sees, and feels, of objects immediately before him, or paipable to his view. If he sometimes employs a highly figurative style to communicate his thoughts, and even stoops, as we now know he does, to amuse his fire-ride circle with lales of extravagant and ofien wild demonic fancy, he is very far from being a man who, in his affairs of lands, and merchandize, and business, erchanges the sober thoughts of self preservation and subsiatence, for the airy conceptions of fancy. The ties of consanguinity bind him strongly. The relation of the family is deep and weil traced amongst the wildest tribes, and this fact alone fortos a basis for bringing him back to all his original daties, and rearganizing Indina society. The author has, at least, been thrown into scenes and positions, in which this truth has atrongly presented itself to his mind, and he believes the facta are of a character which will interest the reader, and may be of some use to the people themselves, so far affecta the benevolent plans of the age, if they do not constutute an increment in the body of obeervational testimony, of a practical nature,* from which the character of the race is to be judged

## TEMPERANCE.

An Indian living at the Porcupine Hitls, near Little Traverse Bny, on lake Michigan, determined to purchase a plece of land from governnment, build a house, and cultivate the ground; but before he executed his design he went to Michilimackinac to consult the agent, and ascertain whether he would be moleated. He was told that his plan was a goocl one, and he would not be molested; but was asked in return by the agent, whether he was a Christinn, or praying Indian. He answered in the affirmative. "Are you sober $?^{\prime \prime}$ He said he considered himself so, although he imitated the white men by taking a glass in the morning. "This is wrong," said the official agent of the tribe, "you should not do 30 , but abandon the habit at once, leat it should impercepibly overcome you." "I will do so," replied the Red Man, after a moment's thought, "as soon as I see the white man abandon the use of ic"

## TALES OF A WIGWAM.

## BOSH-K WA-DOSH,

THE QUADRUPED WITH THE HAIR BLOWN OFF IIS SKIN.
There was once a man who found himself alone in the world. He knew no whence he came, nor who were his parents, and he wandered about from place to place, in search of something. At last he became wearied and fell asleep. He dreamed that he heard a voice anying, "Nosis," that is, my grandchild. When he awoke he actually heard the word repeated, and looking around, he saw a tiny little animal hardly hig enough to be eeen on the plain. While doubting whether the voice could come from such a diminutive source, the little animal said to him, "My grandson, you will call me Boeh-kwa-dosh. Why are you so desolate Listen to me, and you ahall find friends and be happy. You must take me up and bind me to your body, and never pat me aside, and success in life shall attend you." He obeyed the voice, sewing up the little animal in the folds of a string, or perrow belh, which be tied around his body, at his navel. He then set out in search of some one like himself, or other object He walked a long time in woods without seeing man or animal. He seemed all alone in the world. At length he came to a place where a stump was cut, and on going over a hill he descried a large town in a plain. A wide road led through the middle of it; but what seemed strange was, that on one side there were no inhabitants in the lodges, while the other side was thickly inhabited. He walked boldly into the town.

The inhahitante came out and said; "Why here is the being we have heard so much of-here is Anish-in-6-ba. See his eyes, and his teeth in a half circle-see the Wyaukenawbedaid! See his bowels, how they are formed;'-for it seems they could look through him. The king's son, the Mudjekews, was particularly kind to him, and calling him hrother-in-law, commanded that he should be taken to his father's lodge and received with attention The king gave him one of his daughters. These people, (who are supposed to be human, but whose rank in the scale of being is left equivocal,) passed much of their time in play and sporta and criale of various kinds. When some lime had passed, and he had become re-
freshed and restod, he was invited to join in theses aporta The first test which they put him to, was the trial of frost At some distance was a large body of frozen water, and the trial consisted in lying down naked on the ice, and seeing who could endure the longest. He went out with two young men, who began, by pulling off their garments, and lying down on their faces. He did likewise, only keeping on the narrow magic belt with the tiny little animal sewed in it ; for he felt that in this alone was to be his reliance and preservation. His competitors laughed and tittered during the early part of the night, and amused themselves by thoughts of his fate. Once they called out to him, bat he made no reply. He felt a manifest warmth given out by his belt About midnight finding they wero sill, he called out to them, in return,--" What " said he, "are you benumbed already, I am but just beginning to feel a little cold." All whas ailence. He, however, kept his position till early day break, when he gut up and went to them They were both quite dead, and frozen oo hard, that the flesh had bursted out under their finger nails, and their teeth stood out As he looked more closely, what was his surprise to find them both transformed into buffalo cows. He tied them together, and carried them towards the village As be came in sight, those who had wished his death were disappointed, hut tho Mudj6kewis, who was really his friend, rejoiced. "See !" asid be" hut one person appranches,-it is my brother-in-law." He then threw down the carcasses in triumph, but it was found that hy their desth he had ressored two inhabitants to the before empty lodges, and he afterwerds parceived, that every one of these beings, whom lie killed, had the like effect, so that the depopulated part of the village soon became filled with people.

The next test they put him wo, was the crial of speed. He was challenged to the race ground, and began his career with one whom be thought to be a man; hut every thing was eacbanted bere, for he soon discovered that his competitor was a large black bear. The animal outran him, tore up the ground, and sported before bim, and put out its large claws as if to frighten him. He thought of his little guardian spirit in the belc, and wishing to bave the swiftness of the Kakake, i. a oparrow hawk, he found bimself rising from the ground, and with the speed of this hird he outwent his rival, and won the race, while the bear came up exhausted and lolling out his tongue. Hia friend the Mudjokewis stood ready, with his warciub, at the goal, and the moment the bear came up, diepatched him. He then turned to the assembly, who had wished his friend and broher's death, and after reproaching them, be lifted up his cluh and began to slay them on every side. They fell in beaps on all sides; but it was plain to be seen, the moment they fell, that they were not men, but animals,-fores, wolvee, tigers, lynxes, and ohber kinds, lay thick around the Mudjekewis.

Btill the villagere were not satisfied They thought the trial of froet,
had not been fairly accomplished, and wished it repeated, He agreed to repeat it, but being fatigued with the race, he undid his guardian belt, and laying it under his bead, fell arleep. When he awoke, he felt refreshed, and feeling strong in his own strength, he went forward to renew the trial on the ice, but quite forgot the belt, nor did it at all occur to him when he awoke, or when he lay down to repeat the trial About midnight his limbe became stiff, the blood soon ceased to circulate, and he was found in the morning, a stiff corpse The victors wok him up and carried him to the village, where the loudest tumult of victorious joy was made, and they cut the body into a thousand pieces, that each one might eat a piece.

The Mudjekewis bemoaned his fate, but his wife was inconsolable. She lay in a state of partial distraction, in the lodge. As she lay here, she thought she heard some one groaning. It was repeated through the night, and in the morning, she carefully scanned the place, and running her fingers through the grass, she discovered the secret belt, on the spot where her husbend had last reposed. "Aubishin!" cried the belt-that is, untie me, or anloose me. Looking carefully, she found the snall seam which enclosed the tiny little animal. It cried out the more sarneatly "Aubishin ${ }^{\prime \prime}$ " and when she had carefully ripped the seams, she beheld, to her surprise, a minate, naked little beast, smaller than the smallest new born mouse, without any vestige of hair, except at the tip of its tail, it could crawl a few inches, but reposed from fatigue. It then went formard again. At each movement it would pupowee, that is to say, shake itself, like a dog, and at each shake it became larger. This it continued until it acquired the strength and size of a middle sized dog, when it ran off,

The mysterious dog ran to the lodges, about the village, looking for the bones of his friend, which he carried to a secret place, and as fast as he found them arranged all in their natural order. At length he had formed all the skeleton complete, except the heel bone of one foot. It so happened that two sisters were out of the camp, according to custom, at the time the body was cut up, and this heel was sent out to them. The dog hunted every lodge, and being satisfied that it was not to be found in the camp, he sought it outside of it, and found the lodge of the two sisters. The younger sister was pleased to see him, and admired and patted the pretty dog, hut the elder sat mumhling the very heel-bone he was seeking, and was surly and soar, and repelled the dog, although he looked most wistfully up in her face, while she sucked the bone from one side of her mouth to the other. At last she held it in such a manner that it made her cheek stick out, when the dog, hy a quick spring, seized the cheek, and tore cheek and bone awny and fled.

He now completed the skeleton, and placing himself hefore it, uttered a hollow, low, long-drawn-ant-howl, when the bones came compactly together. He then modulated his howl, when the bones lmit together and
became tense. The third howl brought esinews upon them, and the fourth, flesh. He then turned his head upwards, looking into the sky, and gave a howl, which caused every one in the village to starde, and the ground itself to tremble, at which the breath entered into his hody, and he first breathed and then arose. "Hy kow!" I have overslept myself, he exclaimed, "I will be too late for the trial" "Trial !" said the dog, "I told you never to let me be separate from your body, you heve neglected this. You were defeated, and your frozen body cut into a thousand pieces, and scattered over the village, but my akill hes restored you. Now I will declare myself to you, and show who and what I am !"

He then began to pupower, or shake himpelf, and at every shake, ho grew. His body became hesry and massy, his legs thick and long, with big clumsy ends, or feet. He still shook himself, and rose and swelled. A long snout grem from his head, and two great shining teeth out of his mouth. His skin remained as it was, naked, and only a tuft of hair grew on bis tail. He rose up above the trees. He was enormous. "I should fill the earth," said he, "were I to exert my utmost power, and all there is on the earth would not satisfy me to eat. Neither could it faten me or do me good. I should want more. It were useless, therefore, and the gift I have, I will bestow on you. The animals shall henceforth be your food. They were not deaigned to feed on man, neither shall they hereafter do it, but shall feed him, and he only shall prey on beasta But you will respect me, and not eat my kind.
[The preceding in a traditionary tale of Maidosegee, an aged and respected bunter, of Sault-ste-Mairie, who was the ruling chief of the bend of Chippewas at those falle, and the progenitor of the proeent line of ruling chiefs. It is presetved through the Johaston family, where he was a frequeat guest, prior to 1810, and was happy to whila ewfay many of him winter'a evenings, in retarn for the ready hoopitalitiee which wert auts to awail him at the bous of the Indian's friend]

## MÄSH-KWA-SHA-KWONG,

oI

## THE TRADITIONARY STORY OF THE RED HEAD AND HIB TWO SONS.

ET TADCag, AF AGED ODTHWA CHIEF.
Masberwafha-kwong, wan a first rate hunter, and he loved the chase exceedingly, and pursued it with unceasing vigilance. One day, on his return home, arriving at his lodge, he was informed by his two sons, who were but manll then, that they were very lonesome, because their mochor was in the habit of daily leaving them alone, and this occurred 80 soon an
he started upon his daily chase. This circumstance was not onknown to Mash-kwatha-kwong, but he seamed fully aware of it; he took his boys in his arms and kissed them, and told them that their mother bebaved improperly and was acting the part of a wicked and faithiess woman. But Mash-kwa-ba-kwong bebaved towards his wife as if ignorant of her vile course. One morning rising very early, be told his sons to take courage, and that they must not be lonesome, he also etrictly enjoined than not to absent themedves nor quit their lodge; after this injunction was given to the boys, he made preparations, and starting mach earlier than usual, he travelled but a short distance from his lodge, when he halted and secreted himself. After waiting a ahort time, he saw his wife coming out of their lodge, and immediately after a man made his appearance and meeting Mash-kwasha-kwong's wife, they greeted one another. His auspicions were now confirmed, and when he saw them in the act of carrying on an illegal intercourse, his anger aroee, he went up to them and killed them with one blow; be then dragged them both to his lodge, and tying them together, be dug a hole beneath the fire-place in his lodge and buried thern. He then told his sons that it was necesseary that he should go away, as be would surely be killed if he remained, and their safety would depend upon their ability of keeping the mater a secret He gave his eldest son a small hird, (Kichige-chig aw-na-she) to ronst for his small brother over the ashes and embers where their mother was huried, he also provided a small leather bag, and tben told his sons the necessity of his immediate flight to heaven, or to the skies. And that it would be expedient for tbem to fly and journey southward, and thus prepared their minds for the вeparation about to take place. "By and bye," said Mash-kwe-bakwong to his sons, "persons will come to you and enquire for me and for your mother, you will say to them that I am gone hunting, and your littie brother in the mean time will continually point to the fire place, this will lead the persons to whom I allude, to make inquiries of the cause of this pointing, and you will tell them that you bave a little bird roasting for your brother, this will cause them to desis from furber inquiry at th6 time. As soou as they are gone escapel While you are journeying agreenbly to my iustructions, I will look from on high upon you, I will lead and conduct you, and you shall hear my voice from day to day." Masb-kwn-sha-kwong at this time gave his sons an awl, a beaver'a tooth, and a hone, aleo a dry coal, and directed them to place a small piece of the coal on the ground every evening, so soon as they should encamp, from which fire would be produced and given to them; he told his eldeot son to place his brother in the leather bag, and in tbat manner carry him upon his back; be then bade them farewell.

The two boys being thue left alone in the lodge, and while in the act of roasting the little bird provided for them, a man came in, and then another, and another, until they numbered ten in all; the youngest boy
would from time to time point at the fire, and the men enquired to know the reason, the eldest boy said that be was roasting a bird for his brother, and digging the ashes produced it They enquired, where their father and mother were, the boy answered them saying, that their fether was abeent buating, and that their mother had gone to chop and collect wood; upon this infomation the men rase and searched around the ounslirts of the lodge, endeavouring to find traces of the man and his wife, but they were not successful, and returned to the lodge. Before this, however, and during the absence of the ten men, Mash-kwa-sha-kwong's eldeer son placed his litule brocher in the leather bag, (Ouskemood,) and ran away southward.

One of the ten men observed, that the amallest boy bad repeatedly pointed to the fire place, and that they might find out something by digging; they set to work, and found the waman and the men tied together. On this discovery their wrath was kindled, they brandished their weapens, denouncing impercations upon Mash-kwa-sha-kwong: who was of course suspected of having committed the deed.

The ten men again renewed their search in order to avenge themselves upon the perpetrator of this dark deed, but Masb-kwa-thatwong, in order to avoid instant death, had sought a large bollow tree, and entering at the bothom or root part, passed through and reached the top of it, from whence he took his flight upwards to the sky. His pursuers finally traced him, and followed bim as far as the tree, and into the sky, with loud and unceasing impercations of revenge and their detemination to kill him. The spirit of the mother alone followed ber ehildren. About mid-day the boys heard, as they ran, a noise in the heavens like the rolling of distant thunder." The boys continued their journey sounh, when the noise ceased ; towards night they encamped; they put a small piece of the coal on the ground, then a log of firewood was dropped down from the slies to them, from whence a good blazing fire was kindled. This was done daily, and when the fire was lit, a raccoon would fall from on high npon the fire, and in this manner the boys were fed, and this over-ruling care they experienced daily. In the eveninga at their camping place, and sometimes during the day, the Red Head's voice was heard apeaking to his children, and encouraging them to use their utmost exertions to fly from the pursuit of their mother. To aid them in eacaping, they were told to throw away their awl, and immediately there grew a atrong and almost impassahle hedge of thom bushes behind them, in their path, which the partaing mother could acarcely penetrate, and thus impeding her pro-

[^13]greas, tearing away her whole body and leaving nothing but the head. So they escaped the first day.

The next day they resumed their march and could distinctly hear the noise of combat in the sky, as if it were a roaring thunder; they also heard the voice of their mother behind them, desiring her eldest son to stop and wait for her, baying that she wished to give the breast to his brother; then again Mesh-kwa-sha-kwong's voice, encouraging his sons o fy for their lives, and saying that if their mother overtook thera she would surely kill then.

In the evening of the second day the boys prepared to encarap, and the noise of combat on high ceased; on placiag a small piece of the coal on the ground, a $\log$ and some fire-wood was let down as on the preceding night, and the fire was kindled, and then the raccoon placed on it for their food. This was fulfilling the promise mado by their father, that they would be provided for during their flight. The beaver's tooth was here thrown away, and this is the cause why the northern country now abounds with beaver, and also the innumerable litle lakea and marshes, and conaequently the rugged and tedious travelling now experienced.

On the third day the boys reamed their flight, and threw away their hone, and it became a high rocky mountainous ridge, the same now seen on the north shore of these straits, (St. Mnry's) which was a great obxtacle in the way of the women of the Head, for this was now her name, because that part alone remained of her whole frame, and with it she was incessantly utering determinations to kill her eldest son; the boys finally reached the fishing place known as the eddy of Wab-zah-zhawing, at the rapids of Bawating, situated on the north shore of the river. Here Mash-kwa-sha-kwong, told his sons that he had bimself been overtaken in his flight by his pursuers and killed, and he appeared to them in the shape of a red headed wood-pecker, or a mama. This is a bird that is seldom or never attacked by birds of prey, for no vestiges of his remains are ever seen or found by the Indian hunter. "Now ray sons," eaid the red headed wood-pecker, "I have brought you to this river, you will now see your grand father and he will convey you across to the opposite side." Then the boys looked to the southern shore of the river, and they saw in the middle of the rapid, an Oshoogay standing on a rock; to the Oshuggay the boyr spoke, and accosted him as their grand father, requesting him to carry them across the river Bawating. The Oshuggay stretching his long neck over the river to the place where the boys stood, told them to get upon his bead and neck, and again stretching to the southern ehore, he landed the boys in safety, upon a prairie: the crana was seen walking in state, up and down the prairie.

The persevering mother soon arrived at Wah-zah-hawing, and immediately requested the Oshuggey to cross her over, that she was in par-
suit of her children and stating that she wished to overtake them ; but the Oahuggay seemed well aware of her character, and objected to conveying her across, giving her to understand that she was a lewd and bad woman; he continued giving her a long moral lecture upon the course she had pursued and the bad results to mankind in consequence, such as quarrels, murdere, doahh, and hence widowhood.

The woman of the Head persisted in her request of being conveyed across. Ohjections and entreaties followed. She talked as if she were atill a woman, whose favour wes to be sought; and he, as if he were sbove such Gavours. After this dialogue the Oshuggay said that be would convey her across, on the condition that she would adhere strictly to his injunctions; he whld ber not to touch the bare part of his head, hut to get upon the hollow or crooked part of his neck; to this she agreed, and got on. The Oshaggay then withdrew his long neck to about half way across, when feeling that she had forgoten ber pledge he dashed her head upon the rocks, and the small fisb, that were so ahundant instantly fed apon the hrain and fragments of the skull and became large white fish. "A fish" said the Oshuggay, "that from this time forth shall be ahundent, and remain in these rapids to feed the Indians and their issue, from generation to generation." ${ }^{\circ}$

After this transaclion of the Oshuggay's, landing the boys safely across, and dashing the moman's head upon the rocks, he spake to tho Crame and mutually consulting one another in relation to Mash-kwa-gha-kwong's sons they agreed to invite two women from the eastward, of the tribe of the Wasarsia, and the two leds took them for wivea The Oshuggay plucked one of his largest wing feathers and gave it to the eldest boy, and the Crane likewise did the same, giving his feathers to the youngest ; they were told to consider the feathers as their sons after this, one feather appeared like an Oshuggay and the other like a young Crane. By and hy they appeared like human beings to the lads. Thus the alliance was formed with the Wassissig, and the circumstance of the Oshuggey and Crane interesting themselves in behalf of the boys and the gift to them of their feathers and the result, it the origin of the Indian Tatem.

Here Mash-kwa-sha-lcwong's sons were wld that they wonld be considered as chieftaing and that this office would be hereditary and continue in their generations. After this, they multiplied exceedingly and became atrong and powerful About this time the Obinangoes, (or the Bears' Totern) came down from Shaugah-wah-mickong, near the extremity of Lake Superior. On their way eastward they were surprised on reaching Bawating to find such a numerous population of human beinga: they were

[^14]nok awaye of ita being in existence; fear came upon the Obinangoes, and they devised the plan of securing friendship with the Oshuggays and Cranes, by adopting and claiming a relationship with them, and calling them their grandsone. This claim was yielded, and they were permitted to reraain at Bawaiting upon the score of relationship thus happily attained. The Obenangoes eventualiy ernigrated eastward and setcled upon the northern coast of Lakes Huron and Ontario.

Population increased so rapidiy at Bawaiting, that it was necessary to form new villeges, some setting on the Clarden River, some upon the Pakaysaugauegan River, and others apon the island of St. Joooph's, and upon the Menashkong Bay and Mashkotay Saugie River.

About this time, a person in the shape of a human being came down from the sky; his clothing was exceedingly pure and white; he was seated as it were in a nest, with a very fine cord attached to it, by which this mysterious person was let down, and the cord or otring reached heaven. He addressed the Indians in a very humane, wild, and compasionate wone, saying that they were very poor and needy, but telling them that they were perpetaally asleep, and this was caused by the Mache Monedo who was in the mider of them, and leading them to death and ruin.

This mysterious personage informed them also that above, where he came from, there was no night, that the inhabitants never slept, that it was perpetually day and they required no sleep; that Kezha Monedo was their light. He then invited four of the Indians to ascend up with him promising that they would be brought back in eafety; that an opportunity would thereby present itself to view the beauty of the sky, or heavens. But the Indians doubled and feared lest the cord should break, because it appeared to them so small They did not believe it possible it coold bear their weight. With this objection they excused themselves They were, howover, again assured that ths cord was sufficiently strong and that Kezha Monedo had the power to make it sa. Yet the Indians doubted and feared, and did not accompany the messenger eent down to them. After this refusal the mymerious person produced a small bow and arrows with which he shot at the Indians in different parts of their bodiee: the result was, the killing of multitudes of small white worms, which he showed to then; telling them that they were the Mache Monedo which caused them to sleep, and prevented their awakening from their death-like stato

This divine messenger then gave to the Indians laws and rules, wherehy they should be guided: firet, to love and fear Kezha Monedo, and neat that they must love one another, and be charitahle and hospitable; and finally, that they must not covet their neighbours property, but acquirc it by labour and honest industry. He then instituted the grand medicine or metay we win dance: this ceremony was to be observed annually, and with due solemnity, and the Indians, said Nabinoi, experienced much good from it ; but unfortunately, the foolish young men ware chealed by Meche

Monedo, who caused them to adopt the Wabeno dance and its ceremonies. This latter is decidedly an insitution of the sagemaus, or evil epirits, and this was finally introduced into the metay we wining, (i. e. medicine dance) and thereby corrupted it.

The old chief continued his moral strain thus: While the Indians were instructed by the beavenly messenger they were told that it would snow continually far the space of five years, winter and summer, and the end would then be nigh at hand ; and again that it would rain incessantly as many winters and summers more, which would cause the waters to rise and overflow the earth, destroying trees and all manner of vegetation. After this, ten winters and summers of drought would follow, drying up the land, and mostly the lakes and rivers; not a cloud would be seen during this period. The earh would become so dry, that it will then burn up with fire of iself, and it will also burn the waters to a certain depth, until it atunins the first created earth and waters. Then the good Indians will rise from death to enjoy a new earth, filled with an abundance of all manner of living creatures. The only animal which will not be seen is the beaver. The bad Indinas will not enjoy any portion of the new earth ; they will be condemned and given to the evil spirits.
Four generations, be went on to say, have now passed away, since that brotherly love and chority, formerly known, still existed among the ln dians. There was in those ancient times an annual meeting amoog the Indians, resembling the French New Year's Day, which was generally obterved on the new moon's first appearance, Gitchy Monedo gesus. The Indians of our village would visit these of another, and sometimes meet ooe another dancing ; and on those occasions they would exchange bows and arrows, their rude axes, awls, and ketties, and their clothing. This was an annual festival, which was duly observed by them. In those days the Indiane lived happy; but every thing is now changed to the Indian mind, indicating the drawing near and npproach of the end of time. The Indians who still adbere to the laws of the heavenly messenger experience happincss; and, on the contrary, concluded the old man, those who ore wicked and adhere to tbe Wabano institution, generally meet with their reward; end it is singular to say that they generally come to their end by accidents, such rs drowoing, or miserable deaths.

He then reverted to the former part of his story. The Oshuggays, and the Craoes quarrelled, and this quarrel commenced on a trivial point. It appears that the Cranes took a pole, without leave, from the Oshuggays, and they broke the pole; this circumstance led to a separation. The Oshuggays emigrated south, nod are now known as the Shawoees.

# WA-WA-BE-ZO-WIN, 

or<br>THE 8 THNG ON THE LAKE SHORE.

## FIOM THE TMADTIONE OF THE ODJEWAB

T'rere was an old hag of a woman living with her daughter-in-law, and son, and a litule orphan boy, whom she was bringing up. When her son-in-law came home from bunting, it was his custom to bring his wife the moose's lip, the kidney of the bear, or some other choice bits of different animals. These she would cook crisp, eo as to make a sound with ber teeth in eating them. This kind attention of the bunter to his wife, at last, excited the envy of the old woman. She wished to have the same luxuries, and in order to get them she finally resolved to make way with her son's wife. One day, she asked her to leave her infant son to the care of the orphan boy, and come out and awing with her. She took her to the shore of a lake, where there was a high range of rocks overhanging the water. Upon the top of this rock, she erected a swing. She then undressed, and fastened a piece of leather around her body, and commenced swinging, going over tha precipice at every swing. Sbe continued it but a short time, when she wold her daughter to do the same. The daughter obeyed. She undressed, and tying the leather *ring as she was directed, began swinging. When the swing had gos in full motion and well a going, so that it went clear beyond the precipiee, at every sweep, the old woman siyly cut the cords and let her daughter drop into the lake. She then put on her daughter's clothing, and thus disgaised went home in the dusk of the evening and counterfeited her appearance and duties. She found the child crying, and gave it the breast, but ir would not draw. The orphan boy asked her where its mother was. She answered, "She is still swinging." He said, "I shall go and look for her." "No!" said she, "you must not-what should you go for ${ }^{\text {P }}$ " When the husband came in, in the evening, he gave the coveted morsel wh his supposed wife. He missed his mother-in-law, but said nothing. She eagerly ate the dainty, and tried to keep the child still. The hus band looked rather astonished to see his wife studiously averting her face, and asked her why the child cried so. She said, she did not know- that it would not draw.

In the meantime the orphan boy went to the lake shores, and found no one. He mentioned his suspicions, and while the old waman was out geting wood, he told him all that he had heard or sean. The man then
painted bis face black, and placed his apear upside down in the earth and requested the Great Spirit to send lightaing, thunder, and rain, in the hope that the body of his wife might arise from the water. He then began to fast, and told the boy to take the child and play on the lake shore.

We must now go back to the swing. After the wife had plunged into the lake, she found herself talsen hold of by a water tiger, whose tail twisted iuself round her body, and drew her to the bottom. There she found a fine lodge, and all things ready for her reception, and she became the wife of the water tiger. Whilst the children were playing along the shore, and the boy was casting pebbles into the lake, he saw a gull coming from ita centre, and flying towards the shore, and when on shore, the bird immediately assumed the human shape. When he looked again he recognized the lost mother. She bad a leather belt around her loins, and anokher belt of white metal, which wat; in reatity, the tail of the water tiger, her husband. Bhe suckled the babe, and said to the boy-"Come here with him, whenever he crief, and I will nurse him."

The boy carried the child home, and told these things to the father. When the child again cried, the father went also with the boy to the lake shore, and hid himself in a clump of trees. Soon the appearance of a gull was seen, with a long shining belt, or chain, and as soon as it came to the shore, it assumed the mother's shape, and began to suckle the child. The husband bad brought along his spear, and seeing the shining chain, he boldly atruck it and broke the links apart. He then took his wife and child home, with the orphan boy. When they entered the lodge, the old woman looked up, bat it was a look of despair, she instantly dropped her head. A rostling was heard in the lodge, and the next momont, she leaped up, and flow out of the lodge, and was never heard of more.

The name of God, among the ancient Mexicans, was Teo, a word seldom found, except in compound phrases. Among the Mohawks and Onondagas, it is Neo. With the western Senecas, as given by Smith, Owayneo. With the Odjibwas, Monedo; with the Ottowas, Maneto. Many modifications of the word by prefixes, to its radix Edo, appear among the cognate dialects. It is remarkable that there is so striking a similarity in the principal syllable, and it is curious to observe that Edo, is, in sound, bohk the Greek term Deo, and the Azteek Teo, transposed. Ls there any thing absolutely fixed in the sounds of languages?

Crncmatr had, at this time, (1818,) the appearance of a rapidly gtowing city, which appeared to have, from some general causea, been suddenly checked in is growth. Whole rows of unfinished brick buildings had been left by the workmen. Banks, and the offices of corporate and manufacturing companies, were not unfrequendy found shot Nor did it require long looking or much inquiry to learn that it had seen more proeperous times. A branch bank of the U. S. then recently established there, was mach and bitterly, but I know not how justly, spoken against Bat if there was not the same life and air in all departments, that formerly axisted, there was abundant evidence of the existence of resources in the city and country, which must revive and pueh it onward in its career and growth, to rank eecond to nocity west of the Alleghanien This city owes its origin, I believe, to John Cleves Symes, father-in-law of the late President Harrison, a Jerseyman by birth, who, in planning is took Philadelphia as his model. This has imparted a regularity to ita areeta, and equares, that visitors will at once recogniza, as charactorimtic of its pareatage. It stands on a beavy diluvial formation of various layera of clay, loam, sand, and gravel, disposed in two great plateaur, or first and second banks, the lowest of which is some thirty or forty feet above the common summer level of the Ohio. Yet this river has sometimes, but rarely, been known to surmonat this berrier and invade the lowermost stresta of the city. These diluvial beds have yielded some curious antiqgarian relica, which lead the mind farther back, for their origin, than the Indian race. The mast curious of these, if the facts are correctly reported to me, was the discovery of a small antique-shaped irou horseshoe, found twenty-five feet bolow the surface in grading one of the streets, and the blunt end, or stump of a tree, at another locality, at the deph of ninety-four feet together with marks of the cut of an axe, and an iron wedge. I have had no means to verify these facte, but state them as credible, from the corroberative testimony afforded them hy other discoveries in the great geological basin of the west, examined by me, which denote human occupancy in America prior to the deposition of the last of the unconsolidated and eocene series.

Our flocilla here broke ap, and the persons who had formed its floating
community separated, each to pursue his several way, and separate riews. I made several acquaintances, whose names are recollected with pleasure. Dr. S. invited me to dine with him, introduced me to his young parner, Dr. Moorhead, and put me in the way of oblaining eligible private lodgings The three weeks I spent in this city were agreeably passed, varied as they were, by short excursions in the vicinity, including the Licking valley-a stream which comes in, on the Kentucky side, directly opposite the city. I went, one day, to see an experimental structure, built at the foot of the Walnut hille, with a very long pipe, or wooden chamber leading up their sides, and rising above their tops. This was constructed by an ingenious person, at the expense of the late Gen. Lytule, under the confident hope of his realizing a practical mechanical power from the farifaction of atmospheric air. There was confessedly a potet, but the diffculty was in multiplying this power, so as to render it practically applicable to the turning of machinery. The ratio of its increase, contended for, namely, the length of the pipe, appeared to me to be wholly fallacious, and the result proved it so. The thing was afterwards abandoned. There was an ancient mound here, which had not then been opened, but which has since yielded a curious ornamented stone, bearing a kind of arabesque figures, not dissimilar, in the syyle of drawing, to some of the rude scalptured figurea of Yucatan, as recendy hrought to light by Mr. Stephens and Mr. Catherwood.
I received, one day, a note from one of the directors of the White Lead Works, above the city, requesting me to risit it, and inspect in detail the processea of the manufacture. The latter I found to be defective in the mode of corroding the lead hy the acetic acid; there was also an unnecessary complication and amount of machinery iu bringing the oxide into the condition of a good pigment, and puting it into kegs, which had been very onerous in its cost, and was perpetually liable to get out of order.
It was during my slay here that I first felt the effects of the western limestone watere in deranging the stomach and bowels, and paid for my initiation into the habic, a\& all strangers must, by some daye confinement Dr. M. brought me abouk, and checked the discase, without any permanently injurious effects on my general health.

When I was ready to proceed down the river, I went to seek a passage along the landing, but found no boat (steamboats were few and fur between in those days.) While pacing the beach, I met a man of gentlemanly appearance, who had experienced the same disappointment, and was desirous to go forward in his journey. He told me, that he had found a small row boat, well built, and fitted with sents, which could be purchased for a reasonable sum; that it would hold our baggage very well, and he thought we could make a pleasant trip in it as far as Louisrille at the Falls, where the means of comuunication by stcamboats were ample. On examining the boat, and a little inquiry, I acceded to this proposition,
and I bad no cause to regret it. This gentleman, whose name I have forgotten, but which is somewhere among my papers, was a native of the city of Nancy, but a resident of Baltimore. He was, like the city itself I believe, Franco-Gicman, speaking the two language very well, and the English with peculiarities. He had a benevolent and honest countenance and social, agreeable manners, not two free, nor stiffly rearred; and we performed the trip without accident, although we had a narrow escape one day from a sawyer, one of that insidious cast of these river perts, called in western parlance, a slceping savyer. It was now the month of May; the atmosphere was mild and kalmy, loaded with the perfurnes of opening vegetation; we took the oars and the helm alternately; we had a coostant succession of prety views ; we put ashore to eat and to sleep, and the whole trip, which occupied some threa or four days at the farthest, was perfectly delightul

We put ashore at Vevay, where the Swiss had then newly introduced the cultivation of the vine, to see the vineyards and the mode of cultivation. I have since witnessed this culture on the benke of the Rhine, and found it to be very similar. The vines are closely pruned and keps from becoming woody, and are trained to slender sticks, which, are arranged with the order of a garden bean-bed, which at the proper season, they much resemble. We also tared the wine, and found it poor.

On the last day of the voyage, we took into our boat a young phyaician $\rightarrow$ Hollander, recently arrived in the country, telling him, that by way of equivalent, wo should expect him to take his turn at the oars. He was a man of sraall stature-well formed, rather slovenly, yet pretty well dreased, with blue eyes, a florid face, and very volubie. Of all that be said, however, by far the mose atriking part, was his account of his skill in curing cancer. It was clear that he was an itinerating cancer-doctor. He said, amid other things, that he had received an invitation to go and cure the Governor of Indinua. We now had Indiana on our right hand, and Kentucky on our left.

These are the principal incidents of the trip. We reached our demination in safety, and landed on the superb natural sylvan wall, or park, which is formed by the entrance of Beargrass Creek with the Ohio, just in front of, or a little above, Louisville. Here we sold our boat, took separate lodgings, and parted. I found in a day or two, that my friend from Nancy had a floarishing school for military tactics and the sword exercise, where, at his incitation, $I$ went to visit him. From this man, I learned, as we descended the Ohio, that the righe and lefl banks of a river, in military science, are determined by the supposed position of a man standing at its head, and looking downeards.

I found in the lime-stone rocks which form the bed of the river between the town and Com Island, the cornu ammonis and some other specios of organic remains; and while I remained here, which was several weeks,

I wrote a notice for one of the papera, of a locality of manganesa on Bandy river, Ky., and others of some other objects of natural history in the west, which I perceived, by their being copied at the eastward, were well taken. It was my theory, that there was a general interest felt in the Atlantic States for information from the west, and this slight incident served to encourage me.

The steamboat canal since constructed around the falis at this place, was then a project only spoken of, and is here alluded to for no higher purpose than to mention, that in its actual subsequent execution, we are informed the workmen came, at the depth of fourteen feet below the surface of the calcarcous rock, to a brick hearth, covered with what appeared to be the remains of chareoal and ashes.

I took walks almost daily, on the fine promenade, sbaded with lofty trees, festooned with their native vines, along the Beargrass Creek, which is the common place of landing for arks and boats. On one of these occasions, there came in a large ark, which had been freighted at Perryopolis, on the Yioughagany, some thirty miles from Pitaburgh. The two proprietors were $\mathbf{K}$. and $\mathbf{K}$., Marylanderb, boch young men, or verging to middle life, who Las clubbed logether the neceasary funds, and in the spirit of adventure, resolved on a trading voyage. There was something in the air and manners of both, which 1 thought I could trust in for an agreeable voyage, especially as they saw in me, not a rival in commeree of any kind, but a mere observer, - a character which I found, on more than one occasion, placed me on grounds of neutrality and advantage. Steamboats are the worst vehicles ever invented by the ingezuity of man to make observations on a country, always excepting the last iraprovement on loco. motive rail-road. To a naturaliss, especially, they are really horrible. Not a tree or plant can be examined; not a shell, or a rock certainly identified. Hundreds of miles are passed in a fow hours; the effect of speed is to annibilate space; town succeeds town, and ohject object, with such rapidity, that there is no distince time left for observation or reflection; and after the voyager has reached his point of destination, he is often seriously in doubt, what he has seen, and what he has not seea, and is as much puxzled to put togetber the exact feaure of the country's geography, as if he were called to readjust the broken incidents of a night's dream. I had yet another objection to this class of beats, at the era mentioned. Their boilers and machinery were not constructed with elaborate skill and strength ; their commanders were ofien intemperate, and a spirit of reckless rivalry existed, whose results were not infrequently exhibited in exploded, sunk, or grounded boats, and the loss of lives.

It is a regulation of lav that pilots are provided for all boata, dcscending the falls-a descent, by the way, which can only be made on the Indiana dide. When this officer came on board, the owners thought best to go by land to Shippingport I had less at stake in its safety than they, yet felt o
desire to witness this novel mode of descent; nor did the result disappoint me. Standing on the deck, or rather flat roof of the ark, the view was interescing and exciting. The first point at which the mass of water breaks was the principal point of danger, as there is here a powerful reflux, or eddy current, on the right hand, while the main velocity of the current drives the vessel in a direction which, if not checked by the large sweeps, would inevitably swamp it The object is to give this check, and shoot her into the eddy water. This was done. The excitement ceased in a few moments, and we passed the rest of the way with less exertion to the men, and got down the remainder of the falls in perfect eafety. All this danger to the growing commerce of the west, is now remedied by the Louisville canal, which, by a work of but two milea in length, which holds the relative position of a string to the bow, connects the navigatle waters above and below those falls, and perraits all river craft of the largeast burden to pass.

It was about the falls of the Ohio, or a little above, that I first saw the gay and noisy paroquet, or litrle parrot of the west; a gregarious bird, whose showy green and yellow planage makes it quite an object to be noticed and remembered in a passage on the lower Obio. One of these birda, which had been wounded, was picked up out of the river, a few miles below the falls. It was evident, from the occurrence of this species, and other features in the natural history of the country, that we were now making a rapid soubing. The red-bud, the papaw, the buckeye, and the cucumber tree, had all introduced thenselves to notice, among the forest species, below Pittshurgh ; although they are all, I think, actually known to extend a little north of that latitude; and we now soon had added to the catalogue, the pecan and cypress, and the cane, with the constant auendant of the later, the greed briar. I had no opportunity to examine the pocan, until we reached the mouth of the Wabash and Shawneetown, where I went on a shooting excursion wih a young Kentuckian, who gave me the first practical exhibition of bringing down single pigeons and ooher small game with the rifle, by generally striking the head or neck only. I had heard of this kiod of shooting before, and witnessed some capital still shots, but here was a demonstration of it, in brush and brier-catching a sight as best ooe could. The ball used on these occasions was about the size of a large buckshot.

Shawneetown is a word which brings to mind one of the North American tribes, who, between 1632 and the present time, figure as one of the frontier actors in our history. They have, in this time, wilh the ubiquiry of one of their own genii, skipped nver half America. They were once, certainly dwellers on the Savannab, if not, at e still earlier day, on the Suanee, in Florida; then fled north, a part coming down the Kentucky river, and a part fleeing to the Delaware, and thence west. They are now on the Konga, west of the Missouri So mucb for the association of namea

History never remembers any thing which ahe can possibly forget, and I found an least, one high-feeling personage here, who did not like the manner in which I associated the modern town with reminiscences of the savages. "Why, sir," said he, as we walked the deck of the ark, floating down the Ohio, and getting nearer the place cyery moment, "we have a bank there, and a court house; it is the seat of justice for Gallatin county; -and a printing press is about to be established;-it is a very thriving place, and it bids fair to remain second to none below the Wabash." "All this, truly," I responded, willing to reprove pride in an easy way, "is a great improvement on the wigwam and the council-fire, and wampum coin-beade." It is sometimes beller to mmile than argue, and I found it so on the presant occasion. I did not wish to tread on the toes of rising greatness, or pour upon a love of home and locality, honorable and praise-worthy in my fellow traveller, the chilling influence of cold historical facts. My allusions were the mere effect of the association of ideas, resulting from names. If the residents of Shawnectown do not like to be associated with the native race, who would not have exchanged a good bow and arrowa for all the court houses in Christendom, they should beatow upon the phace some epithet which may sever the tie.
(To be continued.)

## LAMGUAGE OF MEXICO.

Humboldt observes that there are twenty languagea in Maxico and New Spain, of which fourteen have grammars and dictionariea tolerably complete. Tha latter are-

1. Merican, or Aztec.
2. Otomita.
3. Tarasc.
4. Zapotec.
b. Mistec.
5. Mia, or Yuealan.
6. Zotonac.
7. Popolouc.
8. Matlazing
9. Hustec.
10. Mixed.
11. Caquiquel.
12. Tarauma
13. Tepehuan.
14. Cora

The languages of New Zealand, Tonga and Malay, have no declension of nonns, nor conjugation of verbs. The purposes of deciension are answered by particles and prepositions. The distinctions of person, tense, and mode, ere expressed by adverbs, pronouns, and other parts of speech. This rigidity of the verb and noun is absolute under every order of arrangernent, in which the words can be placed, and their meaning is noe helped out, by either prefixes or suffixes, as it is in the dialecte of the A1gonquin and other North American languages.

## ETHNOLOGY.

## (continded fhom no. Li)

[Nore.-Accente are placed over all worde of North American origin, when known. Vowelo preceding a consonant, or placed between two consonabte, are genorelify abert: following a consonant, or ending a gyllable or word, they are generally long. Diphthong are uned with their ofdinary power.]

Asgecon. A beach of the sea coast of New Jersey, sirteen miles southweat of Little Egg Harbor. The word is a derivative from Wahisee, a Swan, and Ong, a Place.

Abson6ka, a name for the Minnetaree tribe of Indians on the river Missouri. They are philologically of the Dacotah faraily. See Minnetaree.

Anucees, a mission of the Sucumbias Indians, in the province of Quiros, Quito, which was founded by the order of Jesuits. It is situated on the shores of a small river, which enters the Putumago, in north latitude $0^{\circ}$ $36^{\prime}$ longitude $79^{\circ} 2^{\prime}$ west.

Aborra, a lown, in a rich valley of the same name, in New Grenada, discovered in 1540, hy Robledo. In its vicinity are found many huacas, or sepulchres of the Indians, in which great riches, such as gold ornaments, are found deposited. There are, in the vicinity, some streams of saline water, from which the Indians manufactore sale

Abworn, or Bwons, a name of the Chippewas, Ottawas, and other moden Algonquin trihes of the upper Lakes, for the Dacotah or Sioux nation. It is rendered plural in ug. The word is derived from ahwai, a stick used to roast meat, and is said to have been given to this tribe, in reproach from the ancient barbarities practised towards their prisoners taken captive in war. For an account of this tribe, see Decotah and Siour.

Abwonnc; Abwona: Terms applied to the general area between the Miesissippi and Missouri, lying north of the St. Peter's, occupied hy Sioux tribes. In the earlier attempts of Lord Selkirk, to plant a colony in parta of this region, the compound term Assinaboina, was, to some extent, hut unsuccessfully employed. The two former terias are derivatives from Abwoin, a Sioux, and akee, earth; the latter has the prefix assin, (ossin,) a stone.

Acaquato, a settlement of Indians in the district of Tancitars, in Peru, reduced in 1788, to fifteen families, who cultivated maize and regetahles

Aonrbaro, a setlement of 490 families of Indians, and 80 of Munters,
belonging to the order of Sh. Francis, in the district of Zelaya, in the province and bishopric of Mechoacan, seven leagues S. of ita capital.

Achmotlanuac, a setulement of 30 Indian families in the diarrict of Tas co, attached to the curacy of its capital, from whence it is two leaguea $\mathbf{E}$. N. $\mathbf{E}$.

Achandchitman, a setlement of 60 Gamilies of Indians in the district of Teasopilco, and civil division of Zultepec. They sell sugar and honeythe district also produces maize and vegetsbles. It is 5 leagues N . of its head settlement.

Acantrprc. The head setulement of Tlapa, embracing 92 Indian families, includiag another amall setlement in its vicinity, all of whom maintain themseives hy manufacturing cotton stuffs.

Acapetlabuala, a senlement of 180 Indian families, being the principal settement of the district of Escateopan, and civil district of Zaquaepa

Acabi, a setlement in a beautiful and extensive valley of Camana, in Peru, noted for a lofy mountain called Sabuacario, on the skirts of which the native Indians had constructed two fortresses, prior to their subjugation by the Spanish. This mountain is composed of "mischapen stonea, and sand," and is reported, at certain times of the year to emit loud sounds, as if proceeding from pent up air, and it is thought to have, in consequence, attracten the superstitious regard of the ancient Indian inhabitants.

Acatepsc. There are five Indian settiements of this name, in Spanish America

1. A senlement comprising 860 Indian families, of the order of St. Francis, in the district of Thehuacan. Forty of these families live on cultivated eatates stretching a league in a spacious valley, four leagues 8 . 8. W. of the capital.
2. A settlement in the district of Chinantla, in the civil jurisdiction of Cogamaloapan. It is situated in a pleasant plain, surrounded by three lofty mountains. The number of its inhabitanta is reduced. The Indians who live on the banks of a hroad and rapid river, which intercepte the great road to the city of Oxaca, and other jurisdictions, support themselves hy ferrying over passengers in their barks and canoes. It is 10 leagues $W$. of its head settlement
3. A setlement of 100 Indian families, in the same kingdom, situated between two high ridges. They are annexed to the curacy of San Loreazo, two leagues off.
4. A senlement of 39 Indian families annexed to, and distant one league and a half N . of the curacy of Tlacobula. It is in a hot valley, skired by a river, which is made to irrigate the gardens and grnunds on its borders.
5. A setulement of 12 Indian families in the mayorate of Xicayun of the same kingdom.

Achtepgeve, St. Feancteco, De, a bettlement of 140 Indian families in
the mayorate of St. Audres de Cholula, situated half a league B. of its capital

Acatlan, six locations of Indians exish, under this name, in Mexico.

1. A setlement of 850 families of Indians in the alcaldia of this name, embracing some 20 Spaniards and Mustes. In the vicinity are some excellent salt grounds. The climate is of a mild temperature, and the surrounding country is fertile, abounding in fruits, flowers, and pulse, and is well watered. It is 55 leagues E. S. E. of Mexico.
2. A settiement of 180 Indian families in Xalapa of the stme kingdom, (now republic.) It occupies a spot of clayey ground of a cold moist temperature, in consequence of which, and its being subject to $\mathbf{N}$. winds, fruiss, in this neighbourhood, do not ripen. Orher branches of cultivation succeed from the abundance of streams of water, and their fertilizing effects on the soil. This selluenent has the dedicatory cile of \&t Andres.
3. Sar Pembo, in the district of Malacatepec, and alcaldia of Nesapr It contains 80 Indian families, who trade in wool, and the fish called bobo, which are caught, in large quantities, in a considerable river of the districs.
4. Zitcara It consiase of 198 Indian families, and is a league and a half $\mathbf{N}$. of its head settlement of thie name.
5. Sentrpbe, a settlement 15 leagues N. E. of ita capital. The temperature is cold. It has 42 Indian families.
6. Atoronnico, in the alcaldia mayor of Tulanzingo. It contains 115 Indian families, and has a convent of the religious order of SL Augusine. It is 2 leagues $\mathbf{N}$. of is head seulement.

Acathanzingo, a setluement of 67 Indian families of Xicula of the alcadia mayor of Nexapa, who eroploy themselves in the culture of cochineal plants. It lies in a plana, surrounded on all sides by mountains.

Acaxer, a nation of Yodians in the province of Topia. They are represented to have been converted to the eatholic faith by the society of Jesuite in 1602 . They are docile and of good dispositions and abilities One of their ancient customs consisted of bending the heads of their dead to their knees, and in this posture, pulling them in caves, or under a rock, and at the same time, depositing a quantity of food for their supposed journey in enother state. They also exhibited a farber coincidence with the customs of the northern Indians, by placing a bow and arrows with the body of the dead warrior, for his defence. Should an Indian woman happen to die in child-bed, they put the surviving infant to death, as having been the cause of its mother's decense. This tribe rebelled against the Spanish in 1612 , under the infiuence of a native prophet, but they were sabdued by the governor of the province, Don Francisco de Ordinola.

Acarets, Santa Maria de, the bead settlement of the district of Tepcaca, on the slope of the sierta of Tlascala. It consists of 176 Mexican Indians,

7 Spanish families, and 10 Mustees and Mulatoes. In its vicinity there is a reservoir of hewn stone, to catch the waters of the mountain, which are thence conducted to Tepcaca, three leagues N. N. W.

Acaspebitlan, a cumcy consisting of 406 Indian families of the bishopric of La Peubla de los Angelos. It is in the alcaldia of Tulanzingo: lying 4 leagues $E$ of its capital.

Acayuca, the capital of a civil division of New Spain, in the province of Goozacoalco, embracing, in its population, 296 families of Indians, 30 of Spaniards, and 70 of mixed bloods. It lies a little over 100 leagues S . E. of Mexico, in lat. $17^{\circ} 53^{\prime} \mathrm{N}$.

Acazngo, St. Juan de, a settlement of the district of Tepcaca, consisting of 700 families of Indians, 150 of Spaniards, 104 of Mustees, and 31 of Mulatoes. It is situated in a plain of mild temperature, well watered, and has a convent and fountain, and a number of "very ancient buildings."

Accocesaws, a tribe of Indians of erratic habits, of Texas, whose prinsipal location was fommerly on the west side of the Colorado, about 200 milea S. W. of Nacogdoches. At a remoter period they lived near the gulf of Mesico: they made great use of fish, and oyaters. Authors represent the country occupied, or traversed by them, as exceedingly fertile and beautiful, and abounding in deer of the finest and largest kind. Their language is said to be peculiar to themselves ; they are expert in communicating ideas by the system of signs. About A. D. 1750 the Spanish had a mission among them, but removed it to Nacogdoches.

Accomac, a connty of Virginia, lying on the eastern shores of Cbesapeak bay. This part of the sea coast wes inhabited by the Nanticokes, who have left their names in its geography. We have but a partial voeabulary of this tribe, which is now extinct. It has strong analogies, however, to other Algonquin dialects. Aco, in theoe dialects, is a generic term, to denote a goal, limit, or fired bonndary. Ahkee, in the Nanticoke, is the term for earth, or land. Auk, is a term, in compound words of these dialects, denoting wood. The meaning of accomac, appears to be as far as the woads reach, or, the boundary between meadow and woodlands.

Accomace, one of the sub tribes inhabiting the boundaries of Virginia on its diseovery and first settement. Mr. Jefferson states their numbers in 1607 at 80 . In 1669 , when the legishature of Virginia directed a census of the Indian population, within her jurisdiction, there appeare no nouce of this tribe. They inhabited the area of Northampton county. They were Nanticokes-a people whose remains ubited themsalvea or at least took shelter with the Lenapees, or Delawares.

Acconanocs, a division or tribe of the Powhetanic Iodians, numbering 40, in 1607. They lived on the Accohnoc river, in eantern Virginia.

Accomentas, a band, or division of the Pawtacket Indians inhabiting the northerly part of Massachusetta in 1674. (Gookin.)

Achagra, a nation of Indians of New Grenada, dwelling in the plains of Gazanare and Meta, and in the woods of the river Ele. They are bold and dexerous hunters with the dart and spear, and in their contests with their enemies, they poison their weapons. They are fond of horses, and rub thair bodies with oil, to make their hair shine. They go naked except a small azeaun made of the fibres of the aloe. They anoint their children with a biluminous ointment at their birth, to prevent the groxth of hair. The hrows of females are also deprived of hair, and immediately rabbed with the juice of jagua, which renders them bald ever after. They are of a gentle disposition but eddicted to intoxication. The Jesuite formerly reduced many of them to the Catholic faith, and formed them ino settlements in 1661.
Achufalays, the principal western outlet of the Misissippi river. It is a Choctaw word, meaning, "the long river," from hucha, river, and falaya, long. (Gallatio.)

Acroways, a synonym for a band of Indians of New France, now Canada See Acouez.

Ackeswsissb, a remote norhern tributary of the stream called Rum river, which enters the Misssssippi, some few miles above the falls of St Anthony, on ita left banks. It is a compound phrase, from Akeek, a ketle, and seebe, a stream. It was on the margin of this strean, in a wide and spacious area, interspersed with beaver ponds, thal a detachunent of Gen. Cass's exploring party in July 1820, encamped; and the next morning discovered an Indian pictorial letter, written on bark, detailing the incidents of the march

Ackereo, or the Ketle chief, a leading Sauc chief who exercised his authority in 1820, at an important Indian village, situated on the right banks of the Missiseippi, at Dubuque's mines.

Aонquancheóls, the name of a creek in Penngylvania; it signifies in the Delaware or Lenapee language, as given by Heckewelder, the brushnet fishing creek

Achwiox, a small atream in central Pennsylvenia It denotes in the Dolaware langunge, according to Heckewelder, brusty, or difficult to pass.

Acosanas, a senlement in the provnce of Anguraes in Peru, near which are some monumental remains of the ancient race, who inhabited the country prior to its conquest by the Spanish. They consist, chiefiy, of a pyramid of stones, and the ruins of some well sculptured stone couches, or benches, now much injured by time.
Acolman, San Augusin de, a settlement of 240 families of Indians of Tezcoco in Mexico. It is situated in a pleasant valley, with a benign temDerature, and has a convent of Augustine monks.

Acomes, a fall in the rivar Amariscoggin, Moine, denoting, in the Indian, as is sapposed, a rest, or place of stopping. From aco, a bound or point

Acomolco, a village of 12 Indian families in Zochicoathn, New Spain, two leagues W. of its capital.

Aconicir, the name of a settlement of Indians formerly living on the river Eno, in North Carolina.

Aootither, a setulement of 15 Indisn families, in the alcaldia of Autlan, Maxico. They employ themselves in raising catle, making sugur and honey, and extracting oil from the cacao fruit.

Acoorz, a name formerly applied by the French to a band of Indians in New France. Believed to be identical with Ackowaya.

Acpoacinac, or Acquachinusi, the Indiad name of a town on the W. side of the Passaic river, New Jersey, ten miles N. of Newark and 17 from Now York From aco, a limit, misquak, a red cedar, and auk, a stamp or trunk of a tree.

Acquikosinonse, or United People, the vernacular neme of the Iroquois for their confederacy. It appears, from their traditions, communicated to the Rev. Mr. Pyrlaus, a Dutch missionary of early date, that this torm had nok been in use above 50 years prior to the firss settlement of the country: and if so, we have a late date, not more remote than 1559 for the origin of this celebrated anion. But this may be doubted. Cartier discovered the El Lawrence in 1534, and found them at the site of Montreal ; Verrizani, is said to have entered the bay of New York ten years before. Hudson entered the river in 1609 . Jamestown was founded the year before The Pilgrims landed at Plymouth 14 years later. It is more probable that the 50 years ahould be taken from the period of the earlier attempts of the French settlements, which would place the origin of the confederacy about A. D. 1500. (See Iroquois.)

Actopan, or Octuran, a town and seatlement of the Othomies Indians, situnted 23 leagues N. N. E. of Mexico. Its population is put by Alcedo in 1787, at 2750 families. These are divided into two partiea, separated by the charch. It aloo containg 50 families of Spaniarde, Mustees, and Mulatoes. The temperature is maild, hut the ground is infested with the cactus, thorns and teasel, which leade the inhabitants to devote their attonion to the raining of sheep and goata. In thin vicinity are found numbers of the singular bird, called renzonta by the Mexican Indians.

Actupar, a settlement of 210 families of Indians in the district of $\mathbf{X o c i}$ milco, Merico.

Aculapar, a senlement of 58 Indian families, in the alcaldia mayor of Zallopec, annexed to the curacy of Temascaitopec. They live by dressing hidea for the market-ib.

Aculcse, a setlement of 92 Indian familiea, in the magistracy of Tlapa, Mexico. It in of a hot and moist temperatura, yielding grain, and tho white medicinal earth called chia, in which thoy carry on a trade

Acoro, a considerable settlement of Spaniards, Mustees, Mulatoes, and Negroes, 30 leagaea W. of Cinaqua, in the curacy of Tauricato, Mexico; embracing 9 Indian familiea

Acula, San Pedro de, an Indian settlement of 305 familiea, four leagues E. of Cozamaloapan, its capital. It is situated on a bigh hill, bounded by a large lake of the most salubrious water, called Peutin by the natives. This lake has its outlet into the sea through the sand banke of Alvarado, and the lake is subject to overflow its banks in the winter season.

Acuttran, an Indian settement of 45 families, in the dissrict of Tepuxileo, Mexico, who trade in sugar, honey, and maize. It is five leagues N. E. of Zultepec, and a quarter of a league from Acamuchilan.

Acctaio, an Indian settlement of Tiripitio, in the magistracy of Valladolid, and bishopric of Mechoacan, Mexico. It contains 136 Indian families, and 11 families of Spaniarda and Mustees. Six cultivated atates in this district, producing wheat, maize, and other grains, employ most of this population, who also devote part of their labour to the care of large and small caule.

Adaes, or Adazz, a tribe of Indians, who formerly lived forly miles sourb west from Natchitoches, in the area of country, which now constitutes a part of the republic of Texas. They were located on a lake, which commuoicates with the branch of Redriver pasaing Bayou Pierre. This tribe appears to have lived at that spoh from an early period. Their language is stated to be difficult of acquisition, and different from all others, in their vicinity. They were at variance with the ancient Natcher, and joined the French in their assault upon them in 1799. They were intimate with the Caddoes, and spoke their language. At the last dates, (1812) they were reduced to twenty men, with a disproportionate nnmber of women. The synonyms for this now extinet tribe are, Adayes; Adees; Adaes; Adaize.
Adario, a celebrated chief of the $W$ yandot nation, who was at the height of his usefuloess and repuation, about 1690 . He was able in the councils of his tribe, shrewd and wily in his plans, and firm and courageous in their execution. The Wyandots, or Hurons as they are cailed by the French, were then living at Michilimackinac, to which quarter they had been driven hy well known events in their history. The feud be tween them and their kindred, the Iroquois, still raged. They remained the firm allies of the French; but they were living in a state of expatriation from their own country, and dependant on the friendship and courtesy of the Algonquins of the upper lakes, among whom they had found a refuge. Adario, at this period, found an opportunity of making hiraself felt, and striking a blow for the eventual retarn of his nation.

To underatand his position, a few allosions to the history of the period are necessary.

In 1687, the Englinh of the province of New-York, reeolved to avil
themselves of a recent alliance between the two crowns, to attempt a participation in the fur trade of the upper lakes. They persuaded the Iroquois to set free a number of $W$ yandot captives to guide them through the lakes, and open an intercourse with their people. Owing to the high price and scarcity of goods, this plan was favored by Adario and his people, and also by the Ottowas and Pottowattomis, but the enterprise failed. Major McGregory, who led the party, was intercepted by a large body of French from Mackinac, the whole party captured and their goods were distributed gratuitously to the Indians. The lake Indians, who had, covertly countenanced this attempt, were thrown back entirely on the French trade, and subjected to suspicions which made them uneasy in their councils, and anxious to do away with the suspicions entertained of their fidelity by the French. To this end Adario marched a party of 100 men from Mackinac against the Iroquois. Stopping at fort Cadarackui to get some intelligence which might guide him, the commandant informed him that the governor of Canada, Denonville, was in hopes of concluding a peace with the Five Nations, and expected their ambassadors at Montreal in a few days. He therefore advised the chief to return. Did such a peace take place, Adario perceived that it would leave the Iroquois to push the war against his nation, which had already been driven from the banks of the St. Lawrence to lake Huron. He dissembled his fears, however, before the commandant, and left the fort, not for the purpose of returning home, but to waylay the Iroquois delegates, at a portage on the river where he knew they must pass. He did not wait over four or five days, when the deputies arrived, guarded by 40 young warriors, who were all surprised, and either killed or taken prisoners. His next object was to shift the blame of the act on the governor of Canada, by whom he told his prisoners, he had been informed of their intention to pass this way, and he was thus prepared to lie in wait for them. They were much surprised at this apparent act of perfidy, informing him at the same time, that they were truly and indeed on a message of peace. Adario affected to grow mad with rage against Denonville, declaring that he would some time be revenged on him for making him a tool, in committing so horrid a treachery. Then looking steadfastly on the prisoners, among whom was Dekanefora, the head chief of the Onondaga tribe, "Go," said he, "my brothers, I untie your bonds, and send you home again, although our nations be at war. The French governor has made me commit so black an action, that I shall never be easy after it, until the Five Nations have taken full revenge." The ambassadors were so well persuaded of the perfect truth of his declarations, that they replied in the most friendly terms, and said the way was opened to their concluding a peace between their respective tribes, at any time. He then dismissed his prisoners, with presents of arms, powder and ball, keeping but a single man (an adopted Shawnee) to supply the place of the only man he had lost in the engage-
ment. By one bold effort he thus blew up the fire of discord between the French and their enemies, at the moment it was about to expire, and lnid the foundation of a peace with his own nation. Adario delivered his slave to the French on reaching Mackinac, who, to keep up the old enmity between the Wyondots and the Five Nations, ordered him to be shot On this Adario called up an Iroquois prisoner who was a witness of this scene, and who bad long been detained among them, and told him to ea cape to his own conatry, and give an account of the cruelty of the French, from whom it was not in his power to save a prisoner he bad himself taken.

This increased the rage of the Five Nations to such a pitch, that when Mons. Denonville sent a message to disown the act of Adario, they put no faith in it, but burned for revenge. Nor was it long before the French feit the effects of their rage. On the 26 th of July, 1688 , they landed with 1200 men on the upper end of the island of Montreal, and carried dertruction wherever they went. Houses were burnh, plantations sacked, and men, women and children massacred. Above a thousand of the French inhabitants were killed, and twenty-six carried away prisonera, moat of whom were burnt alive. In October of the sarme year, they renewed their incursion, sweeping over the lower part of the island as they had previoualy done the upper. The consequences of these inroads were most disastrous to the French, who were reduced to the lowest point of political despondency. They hurnt their two vessels on Cadarackui lake, abandoned the fort, and returned to Montreal. The newe spread far and wide among the Indians of the upper lakes, who, seeing the fortunes of the French on the wane, made treaties with the English, and thus opened the way for their merchandize into the lakes.-[Colden.]
Such were the consequences of a single enterprise, ahrewdly planned and vigoroualy executed. The fame of its author spread abroad, and be was every where regarded as a man of address, courage and abilities And it is from this time, that the ancient feud between the Wyandots and their kirdred, the Five Nations, began to cool. They setuled on the straitu of Detroit, where they so long, and up to the close of the late war (1814,) exercised a commanding influence arnong the lake tribes, as keepers of the general council fire of the nations.

La Hontan, in his Travels in New France, relates some conversationa with this chief, on the topic of religion, which may be regarded, almoet exclusively, as fabulous.

Adayes, Adaes, and Aders, forms of orhography, occurring in various writere, for tha Adaize Indians, which see.

Adequatinget, a trihutary of the eastern head waters of the river Surquehamas in New.York. The word is Iroquois

Adnaks, the nomber of this tribe, residing on the walers of Red River,
in Louitiana, in 1825, is stated, in an official report, from the war department of that year, at twenty seren.

Adices, a setilement of Indians in the province of Orinoco. They were of the Saliva nation. 'The sedlement was destroyed by the Caribs in 1684.

Adirondacke, the name of the Iroquois tribes for the Algonquins. The consideration of their history and characteriatics, as a tamily of tribes, will be taken up, under the latter term.

Adirondace Mountanes, a name bestowed, in the geological survey of New York, upon the mountains at the source of the Hudson River.

Addx, IL-ba. See Laba Wadik.
Abicimesis, of Cariboo Island; an island aituated in the north eastern part of lake Superior, which is invested with no other importance than it derives from Indian mythology and superstition. It is small and has seldom been visited. The Chipperpas believe that this is one of the places of residence of their local manitoes, and that it was formerly iohabited by Michabo or Manabosho. Early travellers, who notice this belief, represent its shores to be covered with golden sands, but that these sands are guarded by powerful spirits, who will not permit the treasure to be carried away. Many fanciful talea are told of its having been once attempted, when a huge spirit strode into the water, and reclaimed the shining treasure. This is Carver's version, who, however, confounds it with another contiguous island. Henry, who visited it in his search after silver mines, in 1765, says that the Indians told him that their anceators had once landed there, being driven by stress of weather, but bad great difficulty in eacaping from the power of enormous sakes. He calle it the Island of Yellow Sands. It abounded certainly with hawka in his day, one or whom was so bold as to pluck his cap from his head. He found nothing wo reward his search but a number of Cariboos, which is the American reindeer, of which no less than 13 were killed, during his stay of three days. He represented it to be 12 miles in circumference, low, and covered with poods, and to be sixty miles diotant from the north shore of the lake. He thinks it is perhaps the same island which the French called Isle de Pontchartrain.

Afragoves, a small village of Indians, of Lonigiana, who were located in $\mathbf{1 7 8 3}$ near Point Coupt, on the Misaistippi

Agaces, a nation of Indiana of the provinca of Paraguay. They are numerous, valiant, and of a lofty etature. They were, in ancient times, masters of the benks of the Paraguay, waging war againat the Gnavanies, and lreeping the Spaniards at bay, but were at last gubjugated in 1542 , by Alvar Nunez Cabeza de Vaca, governor of the province.

Agablata, an Iroqnois chief, who, having gone on an ernbessy of peace about 1688, to Caneds, the governor, Monsieur Coursel, being exaspe-
ruted against him, on account of bad faith and a violation of a treasy, caused him to be hanged in the presence of his countrymen.
abamentigus, a mountain of considerable elevation, eight miles from York harbour, Maine; also, a river of the same vicinity, which derives its waters chiefly from the influx of Piscataqua bay. The termination of the name in ws, is foreign, and not in accordance with the Abenalio dialects of this coast

Agamunte, the name of a small lake, or pond, of Maine, which dircharges is waters through the west branch of the Chaudiere river.

Aonwans, a band of Indians of the Pokenoket, or Wampanoag type, who formerly lived at various periods, in part in Sandwich, in part in Ipawich, and in part in Springfield, Massachnoets. The word is writen with some rariety, in old authors, the chief of which, are, the addition of another $g$, and the change of the penulimate a to 0 .

Anocochook, a name of the Indians, for the White Mountains of NewHampohire ; of which the penultimate ok, is the plural This group is also called, according to President Allen, Waumbek-a word, which in same of the existing dialects of the Algonquin, is pronounced Waubik, that is, White Rock.

Aonalos, a tribe of infidel Indians, inhabiting the monntains north of the river Apure, in New Grenade

Aorlss, a tribe of Indians, formerly very numerous, of the government of Santa Marta, to the north of the Cienegra Grande They are, at present, considerahly reduced.

Agua de Culebra, Sen Francisco Xavier De La, a reduccion of Indiant of the Capuchins, of the province of Venezuela. The vicinity produces, in ahundance, cacao, yucao, and ocher vegetahle productions.
agoacagua, an Indian mission, on a hranch of the Oronoco, called Caroni.
Aadacatlan, an Indian mission of Xala, in Mexico. In 1745, is contained 80 families of Indians, who cultivated maize und French beans.

Aavalulco, the capital of the jarisdiction of Izathan, Nem Galicia, which in 1745 , contained 100 Indian families.

Aovanos, a setulement in the province of Mainas, Quito, so called from the Indians of whom it is composed.

Agtarica, an Indian mission of the Jesuita, on the ehores of the river Napo, of the provicee of Máinas, Quito.
aguannoua, an ancient and large setlement of Indians of the Taironas nation, in Santa Marta.

Agoulusoo, a eetlement of the district of Arantzan, in the province of Mechoacan, which contains 36 Indian families. They subseist by sowing meed, cutring wood, making andde trees, and manuficturing vesels of fine earthen ware.

Ahaporia, a lake of Florida, baving its outlat through the Oclawaha river of the gt John's.

Ahasimus, an ancient Indian name, for the present site of Jersey city, Hudson county, New Jersey.

Ahone, or Atrome, a nation of Indians, living on the banks of the river Zaque, in the province of Cinaloe, of California. They are located foar leagues from the gulf, in extensive and fertile plains, and are said to be superior, by nature, to the otber Indians of New 8pain. Bome of their customs denote this. They abhor poligany, they hold virginity in the highest eatimation. Unmarried girls, by way of distinction, wear a small shell suspended to their neek, unil the day of their nuptials, when it is taken off by the bridegroom. They wear woven cotton. They bewail their dead a year, at night and morning. They are gentle and faithful in their covenants and engagements.

Abooandite, a name for the tribe of the $\mathbf{W}$ yandots, which is foand on ancient maps of the Colonies.

Ahuacatlan, the name of four separate settements of Mexico, containing, respectively, $51,13,450$, and 160 families of Indians.

Aboacazalca, Nueva Espána. At this place, 56 families of Indians live by raising rice and cotion. It is in the district of Ean Luis de la Conia.

Ahoacazingo, in the district of Atengo, Nueva Espana, containa 46 Indian families.

Abualican, of the same province, has 36 Indian families.
Aboatelco, ib. Has 289 families, who cultivate wheat and raise catle.
Aruatempa, ib. Has 39 families.
Abuatepec, ib. Has 32 families.
Anvazrra, ib. Hes 36 families, who trade inchia, a white medicinal eartb, grain and earthen-ware.

Arwahawa, a tribe of Iudians who were found in 1805 to be located a few miles above the Mandans, on the sonth west banks of the Missouri. They are believed to have been a band of the Mianitares. They numbered at that date 200. They were at war with the Saake Indians. They claim to have once been a part of the Crow nation. They professed to have been long residents of the spot occupied. The name bas not been kept op, and does nol appear in recent reports from that quarter. Their history is, probably, to be sought in that of the Mandans aud the Minnetares.

Alarualtempa, a settement of Chalipa, Mexico, containing 36 Indian familiea.

Alabualuloo, ib. Two setzlements of this name, contain, respectively, 70 and 42 Indian families.

Auapango, ib. contains 100 Indian familieas
Alatsege, ib. has 45 families of natives.
Alatith, ib. has 100 families

Arcres, a setlement of Indians of Texas, sitrated on the main road to Mexico.

Aiectipac, Mexico. Twenty-one Indian farnitiea reside here.
Ainse, a Chippewa chief of Point St. Ignace, Mechilimackinac county, Michigan. The population of this band, as shown by the government census roils in 1840, was 193, of whom 33 were men, 54 women, and 106 children. They support themselves by the chase and by fishing. They cultivate potatoes only. They receive, together with the other bands, annuities from the government, in coin, provisions, salt, and tobacco, for which purpose they assemble annually, on the island of Michilimackinac. The name of this chief is helieved to be a corruption from Hans.

Atocuesco, an Indian settlement of Chalipa, Mexico. Has 400 Indian families.

Aloctitlan, ib. Hes 76 dito.
Adozinara, ib. Has 34 dituo.
Alozinoo, ib. Has 120 ditto.
Arricos, a nation of Indiana inhabiting the plains of Cazanare and Meta in the new kjingdom of Grenada, to the east of the mountains of Bogota. They inhabit the banks of the river Ele. Thoy are numerous and warlike, and feared by all their neighbours, for their valour and derterity in the use of arms. In 1662 Antonio de Monteverde, a Jesuic established a mission among them, and baptized numbara

Aisbquiconaber A Cbippewa chief, of some note, of a mild and dignified carriage, living on Grand Traverse Bay, on the east shores of lake Michigan. In 1836 be formed a part of the delegation of Chippewa and Ottowa chiefs, who proceeded to Wastington city, and concluded a trealy ceding their lands to the U. S. from Grand river on lake Michigan, to Chocolate river on lake Superior. The name signifies, the first feather, or feather of honour. The population of his village in 1840, as shown by the census rolls, was 207, of whom 51 were men, or heads of families, 49 women, and 107 children. They receive annuities annually at Michilimackinac. They subsist by the chnse, by planting corn, beans and potatoes, and by fishing.

Aisucenugékozh, or the Flat Mouth, called Guelie Plaue, in the patois of the Fur Trade. The Head chief of the band of the Chippewas, called Mukundwas or Pilligers, who are situated at Leech Lake, on the sources of the Mississippi. This band, it is eatimated, can furnish 200 warriors. they are a brave and warlike people, and are at perpetual war with their western neighbours, the Sioux. They subsist by the chase, and by taking white fish in the lake. Some corn and potaloes are also raised by the women and the old and superannuated men of the band. They are a fierce, wild, untamed race, strong in their numbers, and proud and confideat in their success in war, and the comparative ease with which they procure a subsistence from the chase They adbere to their ancient religious cere-
monies and incantations, and are under the government of their native priess, jossakeeds and seers. Aishkebugekozh, has for many years exercised the political sway over them, leading them, sometimes to war, and presiding, at all times, in their councils. He is a shrewd man, of much observation and experience in the affairs of the frontiers. He is of a large, rather stout frame, broad shoulders and chest, and broad face, with a somewhat stern countenance, denoting decision of character and capacity to command. Thin and extended lips, parted in a right line over a prominent jaw, render the name, which his people have bestowed on him, characteristic. By the term Kozh , instead of Odoan, the true meaning of it is rather muzzle, or snout, than mouch, a distinction which the French have preserved in the term Guelle.

Aruinos, a nation of Indians, of the government of Cinaloa, New Spain. They live in the north part of the province. They formerly dwelt in lofty monntains, to escape the effects of war with other nations. In 1624, the Jesuits eablished a mission amongst them. They are docile, well inclined, and of good habits.

Arotla, a setlement of New Spain, containing 187 Indian families. Another location of the same name contains 23 families.

Asocre, a tribe of Indians of Louisiana, in its ancient ertent, while it existed under the government of the French. The word, as expressed in English orthography, is Iowas, and the tribe will be considered under that head.

Axosa, an Odjibwa chief, living on the peninsula of Grand Traverse Bay, lake Michigan, known for his good will towards the mission established near bis village, by the American Board, in 1839. In the recess periods of hunting, he is attentive on the means of instruction furbished at that station. He enjoins on his children attendance at the school. He bestows a punctual care in planting bis corn-field and garden. He has erected a good dwelling house of logs, and supplied it with several articles of plain household furniture. He is of a mild and pleasing character, and appreciates and acknowledges the superiority of agriculture and civilization over the uncertainties of the chase. Without distinction in war, or eloquence, or a genealogy of warriora to refer to, and consequently, of but litule general note or fame in his tribe, he is an active hunter, and sable, temperate man, and may be regarded as a fair average specirven, physically and mentally, of the race. The band of akosa roustered 160 souls, on the pay rolls of 1840 , of which number, 37 were men, 42 women, and 89 children. They receive their annuities at Michilimackinac.

Akansa, 8 synonym of Arkansas.
Alabíma, one of the United Statea of America. The name is derived from a tribe of Indians, who formerly inhabited the banks of the river of the same name. This river, on its junclion with the Torobigbee, forms the Mobile. Tbe Alebama Indians, wero sueceeded in the occupancy of this
river by the Creeks, or Muscogees. They withdrew towards the wesc In 1790 their descendants lived in a village, eligibly situated, on several swelling green hills on the banks of the Mississippi. No accounts of them are given in recent repors. They appear to bave continued tbeir route westward by the way of Red River. The precise period of their crossing the Mississippi is not known. They came to Red River about the same time as the Bolixies and Appalaches. Their language is represented to be the Mobilian, as denominated by Du Pratz, that is the Chacta. Part of then lived, at the end of the 18 th century, on Red River, sixteen miles above Bayou Rapide. Thence they went higher up the stream, and settled near the Caddoes, where they raised good crops of corn. Another party, of about 40 men, lived in Apalousas district, where they cultivated corn, raised and kept horses, hogs and cattle, and exhibited a quiet and pacific character. From a statement published in a papar, at Houston, the seat of government of Texns, in 1840, their deacendants were then settled on the river Trinity, in that republic, where they are associated with the Coshattas, forming two villages, numbering two hundred warriors, or about 1000 souls. They preserve, in this new location, the pacific and agricultural traits noticed during their reaidence in Lousiana.

Alacios, an extensive level prairie, in Florida, about 75 miles west of S. Augustine. The ancient Indian town of Alachua, atood on its borders, but its inhabitants rernoved to a more healthful position at Cuscowilla.

Alaclatzala, a settlement in the district of St Lewis, New Spain, contuining 125 Indian families.

Alahutzlan, ib. a setlement having 270 1ndian families.
Alapals, one of the higher tributary streams of the Suwannee river, in Florida.

Alaske, or Onalaska, a long peninsula on the N. W. coast of America. At it termination, are a number of islands, which form a part of the cluster called the norhern Archepelago.

Aldarrada, a settlement of Indians in the kingdom of Chile, situated on the shores of the river Cauchupil. Also a settlement of New Spain, containing 22 Indian families.

Alempicon improperly written for Nipigon, a mall lake north of lake Superior.

Alpaxaivca, a settlement of New Spain, containing 171 Indian families.

Algangee, a township of the county of Branch, Michigan. It is a compound derivative from Algonkin, gan, a particle denoting a lake, and mushcodainse, a prairie.

Algic, an adjective term used by the writer, to denote a genus or family of tribes who take their characteristic from the use of the Algonquia lar-
grage. It is a derivative from the words Algonguin, and Ake, earth, or land.

Alconquin, a nation of Indians who, on the discovary and setlement of Canada, were found to occupy the oorth banks of the St. Lawrence be tween Quebec, Three Rivers, and the junction of the Utawas. Quebec itself is believed to be a word derived from this language, having its origin in Kebic, the fearful rock or clifl. When the French settled at Quebee, fifteen hundred fighting men of this nation lived between that nation and Sillery. They were reputed, at this era, to be the most warlike and powerful people in Nortb America, and the most advanced in their policy and intelligenca Colden speaks of them as excelling all others. On the arrival of Champlain, who, although not the diseoverer of the country, was the true founder of the French power in Canada, they were supplied with fire arme, and even led to war, by that chivalric officer, against their enemies, the Iroquois. They werf stimulated to renewed exertions in various ways, by the arrival of this new power, and carried the terror of their ams towards the south and sounh-west. They were in close alliance with the Wyandots, a people who, under the names of Quatoghies and Hurons, on Cartier's arrival in 1534, were seen as low down the SL Lawrence as the island of Anticosti, and bay Chaleur. But as soon as the Iroquois had been supplied with the same weapons, and learned their use, the Algonquins were made to feel the effects of their courage, and combined strength. The $W$ yandots were first defeated in a great battle fought within two leagues of Quebec. The Iroquois nert prepared to strike an effective blow againg the collective tribes of kindred origin, called Algonquins. Under the pretence of visting the Governor of Cenada, they introduced a thousand men into the valley of the St. Lawrence, when, finding their enemies separated into two bodies, the one at the river Nicolet, and the other at Trois Riviere, they fell upon them unawares, and defeated both divisions. In this defeat the Nipercerinions (Nipessingat and the Atawawas (Otowas) who then lived on the banks of the St Lawrence, participated. The former, who were indeed but the Algonquins, under their proper name, drew off towards the nortb-west The Atamawas migrated to the great chain of the Manatoulinea of lake Huron, whence they have still proceeded further towards the weat and south, until they reached L'arbre Croche and Grand River of Michigan, their present seats. The Quatoghies or Wyandots fied to the banks of the same Lake (Huron) which has derived its name from the celebrity of their flight to, and residence on ils banks.

Of the Algonquins proper who remained on the SL Lawrence, and who are apecifically entitled to that name, hut a limited number survive. About the middle of the 17th century, they were reduced to a few villagea near Quebec, who were then said to be "wasted, and wasting away under the effecta of ardent spirise." Subsequently, they were collected, by the

Catholic Church, into a mission, and settled at the Lake of Two Mountains, on the Utawas or Grand River of Canada, where they have been inetructed in various arts, and effectually civilized. There, their descendants still remain. They are a tall, active, shrewd, lithe, energic race. Paries of them have been engaged as voyagers and hunters, within modera times, and led in the prosecution of the fur trade into the remote forers of the north-west In these positions, they have manifested a degree of energy, hardihood, and skill in the chase, far beyond that possessed by native, unreclaimed tribes. The Algonquin women, at the Lake of Two Mountains, make very ingenious basket and bead work, in which the dyed quills of the porcupine, and various coloured beads of European manufacture, are employed. They also make finger rings out of moose hair, taken from the breast tuft of this animal, in which mottoes or devices are worked. They have molodious soft voices, in chanting the hymns sung at the mission. This tribe is called Odistkuaguma, that is, People-at-the-end-of-the-waters, by the Odjibwas. They were ealled Adirondacks, by the Six Nations. The term A!gonquin, which we derive from the French, is not of certain etymology. It appears at first to have been a mom de guerre, for the particular people, or tribe, whose descendants are now confined to the position at the Lake of Two Mountains. It was early applied to all the tribes of kindred origin. And is now a generic term for a family ar primitive stock of tribes in North America, who either speak cognate dialects, or assimilate in the leading principles of their laoguages.

The number of these tribes still existing, is very large, and viewed in the points of their greatest difference, the variations in the consonantal and diphthongal sounds of their languages, are considerable. As a general geographical area, these tribes, at various periods from about 1600 , to the present time, cthnographically covered the Atlantic const, from the norhern extremity of Pamlico-sound to the Straits of Belliste, extending west and north-west, to the banks of the Missinipi of Hudson's Bay, and to the east borders of the Mississippi, as low as the junction of the Ohio From this area, the principal exceptions are the Iroquois of New York, the Wyandots west, and the Winnebagoes and small bands of the Docotahs. The grammatical principles of these dialects, coincide. As a general fact, in their lexicography the letters $f, r$ and $v$ are wanting. The dialects detive their peculiarities, in a great measure, from interchanges between the sounds of $l$ and $n, b$ and $p, d$ and $t, g$ and $k$, in some of which, there is a variance even in distant bands of the same tribe. The langunge is transpositive. In its conjugations, the pronouns are incorporated with the verh, either as prefixes or suffixes. Its substantives are provided with adjective inflections, denoting size and quality. Its verbs, on the other hand, receive substantive inflections Gender is, as a rule, lost sight of, in the uniform attempt, to preserve, by inflections, a distinction between anumate and inanimate, and personal or impersonal objects. It is remarls-
able for the variety of its compounds, although the voceabulary itself, is manifestly constructed from monosyllabic roors. All ite suberantives admit of diminutives, but, in no instance, of augmentatives. They also admit of derogative and prepositional inflections. The compariton of adjectives, ia not, on the contrary, made by inflections, but by peparate words. There is no dual number, but in all the dialects, so far as examined, a distinction is made in the plural of the first peraon, to denote the inclusion or exclusion of the object There is no diatinction between the pronoun, singular and plural, of the third porson. The language has some redundancies, which would be pruned off by cultivation. It has many liquid and labial sounds. It has a soft flow and is easy of attainment. It is peculiarly rich and varied, in its compound terms for visible objects, and their motions or acts. Sureams, mountains, vallies, and watera, in all their variety of appearance, are graphically described. It is equally suited to describe the phenomena of the heavens, the air, tempests, sounds, light, colours, motion, and the various phases of the clouds and planetary bodies. It is from this deparment, that a large portion of their personal names are taken.

It is true that many of the grammatical principles of the Algonquin languages, are also developed in other stocks. Yet these atocks are not as well known. It was chiefly in the area of the Algonquin tribes, that the British and French, and Dutch and Swedish colonists sealed, and the result of enquiry, through a long period, has accumulated most materials in relation to this type of the American languages. Specific notices of each of the subdivisions of this stock, will be given under the appropriate names.

The general synonyme for this nation are but few. The principal differences in the orthography, between the French and English writers consist in the latter's spolling the last syllable grim, while the former employ kin. In old encyclopedias and gazetteers, the phrase Algonquinensis, is used. The term Abernaquis, is also a French mode of annolation for the same word, but is rather applied at this time to a specific band. The word Algic, derived from the same root, has been applied by the writer to the entire circle of the Algonquin tribes, in their utmost former extent in North America. Mr. Gallatin bas proposed the term "AlgonkinLenape," as a philological denomination for this important family. Their own narne for the race, is a question of some diveraity of opinion. Thase paricular tribes, who were found on the Atlantic coast between the Chess-peat-bay and the Hudson, called themselves Lenapes, generally with the prefixed or qualifying noun of Linno, or Lenno. Other tribes entending over the largest area of the union, and of British Amcrica, inhabited by this stock, denote themselves as a race, by the term Anishinabed that is, the common people.

The term Lenápe, signifies a male, and is identical in sense with the

Algonquin word Iába. If Lenno, or Linno be, as some contend, a term denoting original, they must be conceded to have had more forethought, and a greater capacity for generalization, than other stocks have manifested, by calling themselves, Original Men. If, however, it only implies, as ohera acquainted with this language, assert, common or general, then is there perceived to be a perfect identity in the meaning of the two terms.

> (To be continued)

## TOTEM

This word is frequently heard in conversation on the fromiers, and is occasionally found in the writings of tourists and others. It is derived from odanuh, the Odjibwa-Algonquin name for a town. Hence, neen dodara, my townsfellow, or mark-fellow. The term is applied to famaleas as well as males. In prononncing the word dodam, an English ear will naturally subsitute t's for d's and as the a in this word is sometimes pronounced short, it has been insensibly converted or corrupted into short e.

It would appear, from this etymology, that the inhabitants of a town consisted otiginally of persons of the eame family, or family name, and consequentiy employed the same personal symbol, picture, badge, or mark. The symbol becarae, at once, the evidence of consanguinity $;$ and it is a species of evidence which we observe to be daily acknowledged by them, even in cases, where tradition has failed to preserve all knowledge of the fach Hence the importance of totems. They serve to denote the family stock or clan. How far this institution extends among the American tribes is not well ascertained. It prevails universally amongst the tribes of the Alganquin-Lenapea family.

Volaire says, in his Essay on History, that rubbing the hand for a long time, with spirit of vitriol and alum, with the juice of an onion, will render it capahle of enduring hot water without injury. One might think that Voltaire had learnt some of his philosophical secrets (if not his theological notions,) from oar Indian jugglers. I have beard of at least one instance, where, not the hand only, but the whole body was, by some secret ruhbing of herbs, rendered capable of sustaining a rapid transit through flames of fire.

Of the Red Race it has been said or sung:-
"Life comes unlooked for,-unregretted flies,
Pleased that he lives, but happy that be dies."

## CHAPTER III.

#### Abstract

A deeper view of the Ozart Chain. Pase along the flanke of the highlande which eond oot the eourees of the Black, Eleven pointa, Carrentu and Spring rivers. Reach - rumantic glon of caven Birde and animals seen. Seltpetro earth; otalactites. Crom the alpine summit of the western Ozarin Source of the Gasconde river. Actident in fording the Litle Ounge river.-Encamp on one of its ribolaries.

Ir was found, as we began to bestir ourselves for wood to light our fire that we had reposed not fir from a bevy of wild ducks, who bad sought the grassy edge of the lake during the night, and with the first alarm besook themselves to flight. With not so ready a mode of locomotion, we followed their example, in due time, and also their course, which was south. At the distance of a couple of miles, we crossed a small stream, running south-east, which we judged to be the outlet of the small lakea referred to, and which is, probably the source of Black River, or the Eleven points. Our course led us in an opposite direction, and we soon found ourselves approaching the sterile hills which bound the romantic valley of the currents. There had been some traces of wheels, on the wofter soil, which had been driven in this direction towards the saltpetre caves, but we completely lost them, as we came to and asceaded these arid and rugged steeps. Some of these steeps rose into dizzy and romantic cliffs, surmounted with pines. We wound our way cautiously amonget them, to find some gorge and depreasion, through which we might enter the valley. For ourselves we should not have been so choice of a path, but we had a pack horse to lead, and should he be precipitated into a gulf, we must bid adieu to our camp equipage. Our arms and a single blanket, would be all we could carry. At length this summit was reached. The view was enchanting. A winding wooded valley, with its clear hright river, stretched along at the base of the summit. Rich masses of folinge, hung over the clear stream, and were reflected in ite pellucid current, with a double beauty. The autumnal frost, which had rifled the highland treen of their clothing, appeared to have passed over this deeply secluded valley,
with but little effect, and this effect, was only to highten the interest of the scene, hy imparting to portions of its foliage, the liveliest orange and crimson tints. And this was rendered doubly aturactive by the contrast. Behind ut lay the bleak and barren hills, over which we had struggled, without a ahade, or a brook, or even the simplest representative of the animal creation. For it is a truth, that during the heat of the day, both birde and quadrupeds betake themselves to the secluded shades of the streams and vallies. From these they sally out, into the plains, in quest of food at early dawn, and again just before night fall. All the rest of the day, the plains and highlands have assumed the silence of desolation. Evening began to approach as we cautiously picked our way down the cliffe, and the first thing we did, on reaching the stream was to take a hearty drink of its crystal treasure, and let our horse do the same. The nert object was to seek a fording place-which was effected without difficuly. On mounting the southern bank, we again found the treil, lost in the morning, and pursued it with alacrity. It wat my tura this day to be in adpance, as guide, but the temptation of small game, as we went up the valley, draw me aside, while Enobitt proceeded to select a suitable spot for the nights encampment It was dark when I rejoined him, with my squirrel and pigeon hunt He hed confined himself closely to the trai. It soon led him out of the valley, up a long brushy ridge, and then through an open elevated pine grove, which terminated abruply in a perpendicular precipice. Seperated from this, at some eight hundred yardis distance, stood a counter precipice of limestone rock, fretted ont into pinnacles and massy walls, with dark openings, which gave the whole the resemblance of architectural ruins. The stream that ran between theen cliffs, was small, and it lay so deep and well embrowned in the shades of evaning, that it presented vividly from this elevation, a weving bright line on a dark surface. Into this deep dark terrific glen the path led, and bere we lit our fire, hartily constructed a bush camp, and betook oursalves, efter due ahlutions in the little stream, to a night's repoes. The siry be eame rapidly overcast, before we had finished our meal, and a night of intense darkness, threatening a tempest, set in. As we sat by our fire, iea glare upen huge beetling points of overhanging rocks, gave the scone a wild and picturesque cast ; and we anticipated returaing daylight with an anrious wish to know and see our exact locality. By the restless tramping of our horte, and the tinkling of his bell, we knew that he had found but indifferent picking.

Dayligbt fulfilled the predictions of the evening. We had rain. It also revelled our position in this narrow, and romantic glen. A high wall of rocke, encompassed us on either hand, but they were not such as would have reaulted in a volcanic country from a valley fissure Narrow and deep as the glen was, it was at once apparant, that it was a valley of denudation, and had owed its existence to the wasting effects of the trifing
ssream within it, earrying awby, particle by particle, the matter loosened by rains and fross, and mechanical attrition. The cliffs are exciusively calcareons, and piled up, mason like, in horizontal layers. One of the most striking pictures which they presented, was found in the great number, size and variety of caves, which opened into this calcareous formation. These caves are of all sizes, some of them very large, and not a few of them situated at elevations above the floor of the glen, which forbade access.

One of our first objects, after examining the neighbourhood, was to remove our baggage and location up the glen, into one of these caves, which at the distance of about a mile, promised us an effectual shelter from the inclemency of the storm. This done, we determined here to wait for sertied weather, and explore the precincts. By far the most prominent object, among the caveras, was the one into which we had thue unceremoniously thrust ourselves. It had evidently been visited before, by persons in search of saltpetre earth. Eflorescences of nitric earth, were abundant in iss fissures, and this salt was also present in masses of reddiah difurial earth, which lay in several places. The mouth of this cave presented a rude irragular arc, of which the extreme beight was probably thirty feet, and the base line ninely. The floor of this orifice occurs, at an elevation of about forty feed above the stream. And this size is hald for about two hundred fee, when it expands into a lofty dome, some eighty or ninety feet high, and perhaps, three hundred in diameter. In its centre a fine spring of water issues from the rock. From this dome several paseages lead off in different directions.
One of these opens into the glen, at an inaccessible point, just below. Anoher runs back nearly at right angles with the mouth, putting out maller pessages, of not much importance, however, in its progress. So aplendid and noble an entrance gave us the highest bopes of finding it bat the vestibule of a natural labyrinth; but the result disappointed us. Tbese ample dimensions soon contrach and after following the main or south passage about five hundred yards, we found our further entrance barred, by masses of failen rock, at the foot of which a small stream trickled through the hroken fragments, and found its way to the mouth Have we good reason to attribute to this small stream, a power sufficient to be regarded as the effective agent in carrying away the calcareous rock, so as to have in a long period produced the orifice? Whence then, it may be acked, the masaes of compact reddish clay and pobble dilavium, which exisa? These seem rather to denote that these caves were open orificea, daring the period of oceanic action, upon the surface of the Ozarks, and that a mass of waters, surcharged with such materinls, flowed into preeristing caverns. This diluvium is, in truth, of the same era as the wide apread stream of like kind, which has been deposited over the metalliferous region of Miseouni. If these, however, be questions for geological doubs,
we had lit upon another inquiry, very prominent on our minds in making this exploration, namely, whether there were ang wild beasts sheltered in its fissures. Satisfied that we were safe on this score, we retraced our footsteps to our fire, and sallied out to visit other caves. Most of these were at such heights as prevented access to them. In one instance, a tree had fallen against the face of the cliff, in such a manner, that by climbing it to its forks, and uaking one of the latter, the opening might be reached. Putting a small mineral hammer in my pocket, I ascended this tree, and found the cave accessible. It yielded some wasyellory and white translucent salactites, and also very delicate white crystals of nitre. The dimensions of this cave were small, and but little higher than to enable a man to stand upright.

In each of the caves of this glen which i entered, during a halt of several days in this vicinity, I looked closely about for fossil bones, hut without success in any insance. The only article of this kind observed was the recent leg and foot bones and vertebra of the bos musarius, which appeared to be an inhabitant of the npperroost fissures in these calcareous cliffs, but I never saw the living species, although I ranged along their summits and bases, with my gun and hammer, at various hours. Some of the compact lime stone in the bed of the creek exhibited a striped and jespery texture. The wood-duck and the duck and mallard sometimes frequented this secluded stream, and it was a common resort for the wild turkey, at a certain hour in the evening. This bird seemed at such times to come in thirety, from its raoges in quest of acorns on the uplands, and its sole object appeared to be to drink. Sitting in the mouth of our cave, we often had a fine opportunity to see flocks of these noisy and fine birds flying down from the cliffs, and perching on the trees below us. If they came to roost, as well as to slack their thirst, a supposition probable, this was an ill-timed movement, so long as we inhabited the glen, for they only escaped the claw and talons of one enemy, to fall before the fire-lock of the other. This hird, indeed, proved our best resource on the journey, for we travelled with to0 much noise and want of precaution generally, to kill the deer and elk, which, however, were ahundant on the highland plains.

We passed three days at the Glen Cave, during which there were several rains; it stormed one entire day, and we employed the time of this confinement, in preparing for the more intricate and unknown parts of our journey. Hitherto we had pursued for the most of the way, a trail, and were cheered on our way, by sometimes observing traces of buman labour. But, from this point we were to plunge into a perfect wilderness, without a trace or track. We had before us, that portion of the Ozark range, which separates to the right and left, the waters of the Missouri from those of the Mississippi. It was supposed, from the best report, that by holding south-west, acrose these eminences, we should strike the valley
of the White River, which interposed icself between our position there and the Arkansas. To enter upon this tract, with our compass only as a guide, and with the certainty of finding no nntritions grass for our horse, required that we should lighten and curail our baggage as much as poosible, and put all our effects into the most compact and portable form. And having done this, and the weather proving setlled, we followed a short distance up the Glen of Caves; but finding it to lead too directly west, we soon left it and mounted the hills which line ita southern border. A number of latter valleys, covered wich thick brush, made this a labour by no means slight. The surface was rough; vegention sere and dry, and every thicket which spread before us, presented an obstacle which was to be overcome. We could have penetrated many of these, which the horse could not be forced through. Such pars of our clothing as did not consist 'of buckskin, paid frequent tribute to these brambles. At length we got clear of these spurs, and entered on a high waving table land where travelling became comparatively easy. The first view of thin vista of nigh land plains was magnificent. It was covered with moderate sized sere grass and dry seed pods, which rustled as we passed. There was scarcely an object deserving the oume of a tree, except, now and then, a solitary trunk of a dead pine, or oak, which had been scathed by lightaing. The bleached skull of the baffalo, was sometimes met, and proved that this anima! had once existed here. Ravely we passed a stunted oak; sometimes a cluster of saptings crowned the summit of a sloping hill ; the deer ofien bounded before us; we sometimes disturbed the hare from ite sheltering bush, or put to flight the quail or the prairie hen. There was no prominent feature for the eye to reat upon. The unvaried prospect produced saticty. We felt in a peculiar manaer the solitariness of the wilderness. We travelled silently and diligently. It was a dry and thirsty barren. From morning till sun set we did not encoonter a drop of water. This became the absorbing object. Hill after hill, and vale after vale were padiently seanned, and diligently footed, without bringing the expected boon. At length we came, without the expectrion of it, to a small running stream in the plaid, where we gladly encamped. There was also some grass which preserved a greenish hue, and which enabled our horse also to recruit himself.

Early the next morning we repacked him, and continued our course, traveling due west south-west. At the distance of five or six miles, we reached the banks of a clear stream of twenty feet wide, running over a bed of pebbles and small secondary boulders. This stream ran towarda the north west, and gave us the firgt intimation we had, that we had crosed the summit and were on the off drain of the Missouri. We supposed it to be the aource of the Gasconade, or at farthers some castern tributary of the Little Osage.

A few hours uravelling brought us to the banks of another stream of
much larger size and depth, but running in the same direction. This sream we found it difficult to croes, and spent several hours in heaping piles of stone, and connecting thern with dry limbs of trees, which had been carried down by flooda. It had a rapid and deep current, on each side of which was a wide space of sballow water and rolled boulders of lime and sand stone. We succeeded in driving the borse safely over. Enobitti led the way on our frail bridge-work, but disurbed the last link of it as be jumped off on the south bank, so that it turned under my tread and let me in. There was no kind of danger in the fall as it was in the shallow part of the stream, but puting out my hands to break the fall, it so happened that my whole weight rested on my gun, which was supported on tro stones, merely on ita butt and muzzle; the effect was to wrench the barrel. I gave it a counter wrench as soon as we encamped, but I never afterwards could place full confidence in it We had not gone over three or four miles beyond this river, when we came to the banks of a third stream, running west, but also sweeping off below, towards the northwest. This atream was smuller than the former and opposed no difficuly in fording it. Having done this we followed it up a short distance, and encamped on ite south banks.

> To be continued.)

## APOTHEGMS BY HIBERNICUS.

The innate meanness of the base borm soul, Reires from honour, as from light the mole.
When the bumbly born acquire riches by just meane, or celebrity from genius (if possessed of humility) he will never be remiaded of his origin.

He that writes apochegras will inadyertently draw his own pictare, though anwilling to amend bis faulto.

It is only in the last stages of depravity that a man is unable to reform: we ought to will while we have the power to act

Beanty and Truth require but simple drapery ; their different modifcations are the origin of art and ormement: genius and taste ere shown in the selection and application of them.

He must have a very high opinion indeed of himeelf, who thinka he can say any thing new and instructive: yet if hy his manner be atrrects attention and reminds ns of a truth, the impression of which had been efficed, we are certainly indetted to him.

Avrice is the basest and moan selfish of the bumen passiona.

## HIST0RY.

## A EYNOPSIS OF CARTIER'S VOYAGES OF DISCOVERY AT NORTH AMERICA.

## FIRST VOYAGE.

Forty-two yeara had elapsed from the discovery of America by Columbas, when Jacques Cartier prepared to share in the maratime enterprise of the age, by visiting the coast Carliet was a native of Normandy, and sailed from the port of St. Malo, in France, on the 20th April, 1534. Is will be recollected that the conqueat of Mexico had been completed 13 yenrs previous. Cartier had two small vessels of 60 tons burden and 61 men each. The crews took an oath, before sailing, "to behave themselvea truly and faithfully in the eervice of the most christian king," Francis I. After an unusually prosperous voyage of 20 days, he made cape "Buona Vista" in Newfoundland, which he states to be in north latitude, $48^{\circ} 30^{\prime}$. Here meering with ice, he made the haven of St. Catherine's, where he was detained ten days This coast had now been known since the voyage of Cabot, in 1497, and had been frequently resorted to, by fishing vessels. Jean Denis, a native of Rouen, one of these fishermen, is said to have published the first char of it, in 1506 . Two years after wards, Thomas Aubert, brought the first natives from Newfoundland to Paris, and this is the era, 1508, commonly assigned as the discovery of Canada. The St. Lawrence remained, however, undiscovered, nor doee it appear that any thing was known, beyond a general and vague knowledge of the coast, and its islands. The idea was yet entertained, indeed, it will be seen by subsequent facts, that America was an island, and that a passage to the Asiatic continent, existed in these latitudes.

On the 21st May, Cartier continued his voyage, sailing "north and by east' from cape Buons Vista, and reached the Isle of Birds, so called from the unusual abundance of sea fowl found there, of the young of which the men filled two boats, " 80 that" in the quaint language of the journal," beaides them which we did eat freah, every ship did powder and salt five or six barrals." He also observed the godwit, and a larger and vicious hird, which they named margaulx. While at this island, they deacried a polar bear, which, in their presence leapt into the eea, and
thus escaped. On their subsequent passage to the main land, they again encountered, as they supposed, the same animal swimming towards land. They manned their boats, and "by main strength overtook her, whose flesh was as good to be eaten, as the flesh of a calf two years old." This bear is described to bef, "as large as a con, and as white as a swan."

On the 27th he reached the harbour of "Carpunt" in the bay "Les Chastaux," latitude $51^{\circ}$, where he was constrained to lay by, on account of the accumulation of ice, till the 9 th of June. The narrator of the voyage takes this occasion to describe certain parts of the coast and waters of Newfoundland, tho island of St. Catherine, Blanc Sablon, Brest, the Isle of Birds, and a numerous group of Islands called the Islets. But these memoranda are not connected with any observations or discoveries of importance. Speaking of Bird and Brest Islands, he says, they afford " great store of godwits, and crows, with red beaks and red feet," who "make their nests in boles underground, even as conies." Near this locality "there is great fishing."

On the 10th June, he entered a port in the newly named island of Brest, to procure wood and water. Meantime, boats were dispatched to explore among the islands, which were found so numerous " that it was not possible they might be told, for they continued about 10 leagues beyond the said port" 'The explorers slept on an island. The next day they continued their discoveries along the coast, and having passed the islands, found a haven, which they named SL Anthony: one or two leagues beyond, they found a small river named St. Servansport, and here set up a cross. About three leagues further, they discovered another river, of larger eize, in which they found salmon, and bestowed upon it the name of SL Jacques.

While in the latter pasition, they descried a ship from Rochelle, on a fahing voyage, and rowing out in their boats, directed it to a port near at hand, in what is called "Jaques Cartier's Sound," "which," adds the narrator, "I toke to be one of the best, in all the world." The face of the country they examined, is, however, of the most sterile and forbidding character, being litule besides "stones and wild crags, and a place fit for wild beasse, for in all the North Island," he continues, "I did not see a cart load of good earth, yet went I on abore, in many places, and in the Island of White Sand, (Blanc Sablon, there is nothing else hut moss and annall thorns, scatered here and there, withered and dry. To be short, I believe that this was the land that God allotted to Cain."

Immediately following this, we have the first description of the nativen. The men are described as being "of an indifferent good stature and big. nese, but wild and unruly. They wear their hair tied on the top, ilie a wreath of hay, and put a wooden pin within is, or any other such thing, instad of a nail, and withthem, they bind certain hirda feathers. They are
clothed with beast skins, as well the men as women, but that the women go somewhat straiter and closer in their garments, than the men do, with their wsists girded. They paint themselves with certain roan colours; their boats are made of the bark of birch trees, with the which they fish, and take great store of seals. And as far as we could undersund, since our coming thither, that is not their habitation, but they come from the main land, out of hotter" countries to eatch the suid seals, and other necessarics for their living."

From this exploratory trip, the boats retnrned to their newly named barbour of Brest, on the 13h. On the 14th, being the Sabbath, service was read, and the next day Cartier continued his voyage, stecring southerly, along the coast, which still wore a most barren and cheerless aspect. Much of this part of the narrative is lnken up with dislances nod soundings, and the naming of capes and islands of very little interest at the present day. They saw a few huts upon the cliffs on the 18 th , and named this part of the coast "Les Granges," but did not stop to form any acquaintance with their tenants. Cape Royal was reached and named the day prior, and is said to be the "greatest fishery of cods there possibly may be, for in less than an hour we took a hundred of them." On the 24th they discovered the island of St. John. They saw myriads of birds upon the group of islands named "Margaulx," five leagues westward of which they discovered a large, fertile, and well-timbered island, to which the name of "Brion" was given. The contrast presented by the soil and productions of this island, compared with the bleak and waste shores they had before encountered, excited their warm admiration; and with the aid of this excitement, they here saw "wild corn," peas, gooscberries, strawberries, damask roses, and parsley, "with other sweet and pleasant herbs." They here also saw the walrus, bear, and wolf.

Very little is to be gleaned from the subsequent parts of the voyage, antil they reached the gulf of St. Lawrence. Mists, head winds, barren rocks, sandy shores, storms and sunshine, alternately make up the landscape presented to view. Much caution was evinced in standing off and on an iron bound coast, aod the boats were often cmployed in exploring along the main land. While thus employed near a shallow sricam, called the "River of Boats," they saw natives crossing the stream in their canoes, but the wind coming to blow on shore, they were compelled to retire to their vessels, without opening any communication with them. On the following day, while the bonts were traversing the coast, they saw a native running along shore after them, who made signs as they supposed, directing them to return towards the cape they had left. But as soon as the boat turned he ficd. They landed, however, and putting a

[^15]knife and a woollen girdle on a staff, as a good-will offering, returned to their vessels.

The character of this part of the Newfoundland coast, impressed them as being greatly superior to the portions which they had previously seen, both in soil and temperature. In addition to the productions found at Brion's Island, they noticed cedars, pines, white elm, ash, willow, and what are denominated "ewe-trees." Among the feathered tribes they mention the "thrush and stock-dove." By the latter term the passenger pigeon is doubtless meant. The "wild corn" here again meationed, is said to be "like unto rye," from which it may be inferred that it was the zizania, although the circumstance of its being an equatic plant is not menioned.

In running along the coast Cartier appears to have heen engrossed with the idea, so prevalent among the mariners of that era, of finding a passage to India, and it was probably on this account that he made such a scrupulous examination of every inlet and bay, and the productions of the shores. Wherever the latter offered anything favourable, there was a strong disposition to admiration, and to make appearances correspond with the theory. It must be recollected that Hudson, seventy five years later, in sailing up the North River, had similar notions. Hence the applicalion of several improper terms to the vegetahle and animal productions of the latitudes, and the constant expectation of beholding trees bending with fruits and spices, "goodly trees" and "very sweet and pleasant herbs." That the barren and frigid sbores of Labrador, and the northern parta of Newfonndland, should have been characterised as a region subject to the divine curse, is not calculated to excite so much surprise, as the disposition with every considerable change of soil and verdure, to conver it into a land of oriental fruitfulness. It does not appear to have been sufficiently borne in mind, that the increased verdure and temperature, were, in a great measure, owing to the advancing state of the season. He came on this const on the l01h of May, nnd it was now July. It is now very well known that the summers in high northern latitudes, although short, are attended with a high degree of heat.

On the 3d of July Cattier entered the gulf to which the name of St. Lawrence has since been applied, the centre of which he slates to be in latitude $47^{\circ} 30^{\prime}$. On the 4th he proceeded up the bay to a creek called St. Marin, near bay De Chaleur, where he was detained by stress of wea. ther eight days. While thns detained, one of the ship's boals was semt a-head to explore. They went 7 or 8 lengues to a cape of the bey, where they descried two parties of Indians, "in about 40 or 50 canoes," crossing the channel. One of the parties landed and beckoned them to follow their example, "making a great noise" and showing "certain skins upon pieces of wood"-i. e. fresh stretched skins. Fearing their numbers, the seamen kept aloof. The Indians prepared to follovs thent, in two canoes, in which movement they were joined by five canoes of the other party,
"who were coming from the sen side." They approached in a friendly manner, "dancing and making many signs of joy, saying in their tongue Nape tondamen assuath." The seamen, however, suspected their intentions, and finding it impossible to elude them by flight, two shota were discharged among them, by which they were so terrified, that they fled precipitately ashore, "making a great noise." After pausing awhile, the "wild men" however, re-embarked, and renetved the pursuit, hut after coming alongside, they were frightened back by the strokes of two lances, which so disconcerted them that they fled in haste, and made no further attempt to follow.

This appears to have been the first rencontre of the ship's crew with the native. On the following day, an interview was brought on, by the appronch of said "wild men" in nine canoes, which is thus described. «We being advertised of their coming, went to the point where they were with our boats; but so soon as they saw us they began to flee, making signs that they came to traffic with us, showing us such skins as they clothed themselves withal, which are of small value. We likewise made signs unto them, that we wished them no evil, and in sign thereof, two of our men ventured to go on land to them, and carry them knives, with other iron wares, and a red hat to give unto their captain. Which, when they saw, they also came on land, and brought some of their skins, and so began to deal with us, seeming to be very glad to have our iron wares and oxher things, dancing, with many other ceremonies, as with their handa to cast sea water on their heads. They gave us whatever they had, not keeping any thing, so that they were constrained to go back again naked, and made us signa, that the next day, they would come again and bring more skius with them."

Observing a spacious bay extending beyond the cape, wherc this intercourse had been opened, and the wind proving adverse to the vessels quiuing their harbour, Cartier despatched bis boats to examine it, under an expectation that it might afford the desired passage-for it is at all times to be observed that he was diligently seeking the long sought passage to the Indies. While engaged in this examination, his men discovered "the smukes and fires" of "wild men" (the term constantly used in the narrative to designate the natives.) These smokes were upen a small lake, communicating with the bay. An amiable interview took place, the natives presenting cooked seal, and the French making a suitable return "in hatchets, knives and beads." A fier these preliminaries, which were conducted with a good deal of caution, by deputies from both sides, the body of the men approached in their canoes, for the purpose of trafficking, leaving moat of

[^16]their families behind. About 300 men women and children were estimated to have been scen at this place. They evinced their friendship by singing and dancing, and by rubbing their hands upon the arms of their European visitors, then lifting them up towards the heavens. An opinion is expressed that these people, (who were in the position assigned to the Micmacs in 1600 in Mr. Gallatin's ethnological map,) might very easily be converted to Christianity. "They go," says the anrrator, " from place to place. They live only by fishing. They have an ordinary time to fish for their provisions. The country is hotecr than the country of Spain, and the fairest that can possibly be found, allogether smooth and level." To the productions hefore noticed, as existing on Brion's island \&c., and which were likewise found here, he adds, "white and red roses, with many other fowers of very sweet and pleasant smell." "There be also," says the journalist, "many goodly meadows, full of grass, and lakes, wherein plenty of salmon he." The natives called a batchet corki, and a knife bacon.* It was now near the middle of July, and the degree of heat experienced no the excursion induced Cartier to name the inlet, Beie du Chaleur-a name it sill retnins.

On the 12th of July Cartier left bis moorings at St. Martin's creek, and proceeded up the gulf, but encountering bad weather he was finced into a bay, which appears to bave been Gaspe, where one of the vessels loss her anchor. They were forced to take sbelter in a river of that bay, and thete detained thirteen days. In the mean while they opened an intercourse with the natives, who were found in great numbers engaged in fisbing for makerel. Forty canoes, and 200 men women and children were estimated to have been seen, during their detention. Presents of "knives, combs, beads of glass, and other trifles of small value," were made to them, for which they expressed great thankfulness, lifting up their bands, and dancing and singing.

These Gaspe Indiaus are represented as differing, both in nature and linguage, from those before mentioned. They presented a picture of abject poverty, were partially clothed in "old skins," and lived without the use of tents. They may, says the journalist, "very well and truly be called wihl, because there is no poorer people in the world, for 1 think, all they had together, besides their boats and nets, was not worth five sous." They shaved their heads, except a tuft at the crown; shelzered themselves at night under their canoes on the bare ground, and ate their provisions very partially cooked. They were wholly without the use of salt, and "ate nothing that had any taste of salt." On Cartier's firat landing among them, the men expressed their joy, as those at bay Chaleur had done, by singing and dancing. But they had caused all their women,

[^17]except 2 or 3 , to flee into the woods. By giving a comb and a tin bell to each of the women who had ventured to remain, the avarice of the men was excited, and they quickly caused their women, to the number of about 20 , to sally from the woods, to each of whom the same present was made. They caressed Cartier by touching and subbing bim with their hands; they also sung and danced. Their nels were made of a species of indigenous bemp; they possessed also, a kind of "millet" called "kapaige", beans called "Sahu," and nuts called "Cahehya." If any thing was exhibited, which they did not know, or understand, they shook their heads saying "Nohda." It is added that they never come to the sea, except in fishing time, which, we may remark, was probably the cause of their having no lodges, or much other property about them. They would naturally wish to disencumber their canoes as much as possible, in these summer excursions, that they might freight them back with dried fish. The language spoken by these Guspe Indians is manifestly of the Iroquoir type. "Cahebya," is, with a slight difference, the term for fruit, in the Oneida.

On the 24th July, Cartier set up a cross thirty feet high, inscribed, "Vire le Roy de France." The natives who were present at this ceremony, seem, on a little reflection, to bave conceived the true intent of it, and their chief complained of it, in a "long oration," giving them to understand "that the country was his, and that we should not set up any cross, without his leave." Having quieted the old chief's fears, and made use of a little duplicity, to get him to come alongside, they seized two of the netives for the purpose of taking them to France, and on the next day set sail, up the gulf. Afier making some further examinations of the gulf, and being foiled in an attempt to enter the mouth of a river, Cartier turned his thoughis on a return. He was alarmed by the furious tides setting out of the St . Lawrence; the weather was becoming termpestuous, and under these circumstances he assembled his captains and principal men, "to put the question as to the expediency of continuing the voyage." They advised him whis effect: That considering that easterly winds began to prevail-" that there was nothing to be gotlen"-chat, the impetuosity of the tides was such "That they did but fall," and that storms and tempests began to reign-and moreover, that they must either promptly return home, or else remain where they were tull apring, it was expedient to return. With this counsel be complied. No tine was lost in relracing their outward track, along the Newfoundland coast 'They reached the port of "White Sands," on the 9 th of August. On the 15th, being "the feass of the Assumption of Our Lady," after service, Cartier took his deparinre from the cosst. He encountered a heavy storm, of three days continuance, "about the middle of the sea," and reached the port of St. Malo, on the 5th of September, after an absence of four months and sixteen days.

This comprises the substance of the first voyage of discovery, of which
we have knowledge, ever made within the waters of the St. Lewrence The Newfoundland and Nova Scotia coasts, together with the shores of the North Atlantic generally, had heen discovered by Cabot, 37 years before. The banks of Newfoundland had been resorted to, as is known pretty freely for the purpose of fishing, for 26 years of this period, and the natives had been at least, in one instance, taken to Europe. But the existence of the St. Lawrence appears not to have heen known. Cartier, is, therefore, the true discoverer of Canada, although he was not its founder. The latter honour was reserved for another. In the two succeeding voyages made by Cartier, of which it is proposed to make a synopsis, his title as a discoverer, is still more fully eatablisbed. But it will beseen, that he still thought Canada to bean island, and he has left a lasting monument of the still prevalent notion of a north-west passage to China, in the name of Lachine, which wan bestowed by him and his followers upon the noted point of embarkation for the interior, nine miles above the city of Montreal.

My ohject in taking up these obsolete voyages, as they are given in his quaint language in Hakluyt, has been to determine the particular races or tribes among whom the French first landed, and the utmost points, to which the Iroquios and Algonquin stocks, respectively descended towards the sea, in their summer fishing excursions, during the early part of the 16 th century. By a close scrutiny of their customs and languages, the line of territorial separation, may also, it is beliered, be denoted between these, and the Labrador Algonquins, and their northem neighbours, the Esquimaux.

## (To be continued)

All who have served under Jason, says Xenophon, have learned this lesson, that fleasuie is the effeot of toil ; though as to sensual pleasures, I know no person in the world more temperate than Jason. They never break in upon his time ; they alwaya leave him leisure to do, what must be done.

Sorne men are contemptible for one thing, and some for another, but no one has earned a better claim to the word, than the foreign tourist or observer, who can see nothing in his travels to approve or admire; whose mind is so jaundiced by prior association, and so wedded to the narrow precincts of his native localities, as to think every poricle of praise or approbation bestowed upon the features, institutions or manners of other lands, as so much abatracted from his own, and who, having been received in his visits, with courtesy and attention, mayhap far above his merits, repaya it on his return home, in strains of detraction and ahuse.

## THESHORT-FOOT.

## 

Moss of the individuals who have figured amongst the Red Race in America, have appeared under circurntances which have precluded any thing Like a full and consistent biography. There is, in truth, but little in savage life, to furnish materials for such biographies. The very scantnes of events determines this. A man suddenly appears among these tribes as a werrior, a negaciator, an orator, or a prophet, by a name that nobody ever before beard of. He excites atlention for a short time, and then sinks back into the mass of Indian society, and is no more heard of. His courage, his eloquence, or his diplomatic skill, are regarded as evidences of talent, and energy of thought or action, which, under better auspices, might have produced a shining and consistent character. But be has been left hy events, and is sunk in the mass. He appeared rather like an erratic body, or flash, than a fixed light amid his people. The circumstances that brought him into notice have passed away. A victory has been won, a speech made, a noble example given. The affair has been adjusted, the tribe resumed its hunting, or corn-planting, or wandering, or internai discords, aod the new name, which promised for a while to raise a Tarnerlane, or Tippoo Saib in the west, settles down in the popular mind; and if it be not wholly lost, is only heard of now and then, as one of the signatures to some land treaty. There is not, in fact, sufficient, in the population, military strength, or importance of the affairs of most of our tribes, to work out incidents for a sustained and full biography. Even the rnost considerable personages of paes times, who have been honoured with such full notices, have too much resemblance to a sout boy in his father's regimentals. They bang loosely about him. The most that can be done-all indeed which the occasion requires in general-is a skech of such particular events, in aboriginal history, as the individual has connected his name with. It is proposed in the progress of this work, to furnish some of such sketches from the unwritten annals of the west and the nork.
Among that class of aboriginal chiefs and actors, who have not risen to the highest distinction, or attained general notoriety out of the circle of their own tribes, was Takozid, or the Short-Foot; a Mukundwa, or pit lager; a fierce, warlike, and predatory tribe of the Odjibwa Algonquio
stock, who, at an early time seated themselves on the sources of the Mississippi, making their head quarters at Leech Lake. To this place, their traditions assert they came from Chagoimegon, or still farther east, prior to the discovery of the country by Europeans. They were consequenty intruders in, or conquerors of the country, and drove back some other people. It seems equally probable that this people were the Dacotahs, the Naddowassies, or as it is abbreviated, Sioux, of early French writers. The Sioux are a numerous and warlike stock, who occupy portions of the banks of the Missouri and the Mississippi, at, and about the latitude of St. Anthony's Falls. A herediary war of which "tbe memory of man runneth not to the contrary," was the consequence of this ancient inroad. Of all this region of country we can speak from personal knowledge, having traversed it at sundry times, and in various directions. It is in local reminiscence, littie more than a widely extended scene of Indian batles, ambuscades and murders. There is hardly a prominent stream, plain or forest, which is not referred to, as the travelier proceeds, as the particular locality of some fight, tragedy, or hair-breath escape amoog the Red Men. The Olympic garnes were not a surer test of fame in successful rivalry, than is this wide area of aboriginal warfare, for the opposing nations of the Sioux and Chippewas. War is the prime avenue to distinction to the Indian mind. As soon as a hunter has acquired nny distinction, and begins to look upon bimself as a person of caurage and address, he turns his effors to the war path. Whatever eise he is famous for, this is the crowning test and seal of his reputation. And none have pursued it with more incessant devotion than the Cbippewas.

Takozid determined from his earliest youth to take a part in the strife for barbaric glory. He early joined the war parties going into the great plains. He learned their arts, repeated their songs, and became expert in all the warrior's arts. He established the reputation of a brave young man. The next step was to lead a war pary himself. He courted popularity by generosity, self denial, and attention to their religious rites and ceremonies. These things may be done on a smailer scale, as effectually among a bend of sapages, as in the hall or forum. He succeeded. He raisod a war pary, conducted it into the plains, discovered his enernies, appronched them slily, fell upon them, defeated them, and returned in triumpb with their scalps to his village. His deep and hollow che nwas dou, or death-cry of victory as he came to the eminence which overiooked his village, announced all this before he set foot in his village: and the number of his sealps.

These exploits placed him on the pinnacle of fame. It is a curious lach, in the lives of our Red men, to observe that war is a stimulus to poligamy. One of the first things he tbought of, as a proper revard for his bravery, was to take another wife. In this, his friends and partizans concurred, allhough be had no cause of dissatisfaction with his first wife, to whom he
had been married but a short time, and who had bome him a son. Time added confirmation to this plan. It was talked of, and even debated by the chiefs. It was conceded to be due to his bravery. All, indeed, appeared to approve of it, but his wife. She heard of the rumor with alarm, and received the account of its confirmation, with pain. It could no longer bo doubted, for the individual who was to share, nay, control the lodge with her was named, and the consent of her parents had been obtained.

Monon, or the Little-Iron-Wood-Tree, as she was called, was a female of no ordinary firmness of character. She was ardently attached to her husband, not the less so for his rising fame, jealous of her rights, and prompted by strong feelings to maintain them. In all these points she was above the generality of her country women. Like others, however, in a community where poligamy was common, she might have submitted to length, to her fate, had not her rival in the affections of Takozid, appealed to a deeper seated principle, and waked up, in the breast of the injured wife, the feeling of revenge: a principle reckless enough, in communities where there are the safeguards of education and christianity to restrain and regulate it; but horrible in wild and roving bands of barbarians. Monon's fidelity was slandered. She was a pure and high minded woman, and the imputation gooded her to the quick,

When this slander first reached her ears, through the ordinary channel of village gossip, a chord was struck, which vibrated through every throe, and steefed her heart for some extraondinary act ; although none could anticipate the sanguinary deed which marked the nuptial night. An Indian marriage is often a matter of little ceremony. It was not so, on thit occasion. To render the events imposing, many had been invited. The bride was dressed in her best apparel. Her father was present. Many young and old, malea and females were either present or thronged around the lodge. The broad clear blue waters of the lake, studded with green islands, spread before the door. A wide grassy lawn, which was the village ball and play ground, extended down to its margin. It was a public event A throng had gatbered around. Takozid was to ba married. He was to take a second wife, in the daughter of Obegwad. Takozid himself was there. Hilarity reigned within and without. All indeed, were there, but the dejected and deserted Monon, who had been left with her child, at the chieftain's own lodge.

But a spirit had been aroused io her breast, which would not permit her to remain absent. She crossed the green silently, stealthily. She stood gazing awhile at the lake. She approached the bridal ledge. She passed easily among the group. She entored the todge. Nor had nay one, st that moment, a thought of suspicion or alarm. The bride was seated on her envied abbinos; her affianced husband was at her side.

All at once, there arose a shrill cry, in the Chippewa tongue. "This, vociferated the enraged Monon, This for the bastard!" and at each repeti-
sion of the words, she raised an Indian poignard, in her hand The suddemness of her moverment bad paralyzed every aumpt to arrest her. Amazement ast in every face. She had plunged a pointed knife into the breast of her rival.

There is little to be added to such a catartrophe. Ite very suddenness and atrocity appalled every one. Nobody arrested her, and nobody pursued her. She returned as she came, and re-entered her lodge. Her victim never spoke.
From this moment the fame of Takozid declined. The event appeared to have unmanned him. He went no more to wer. His martial spirits appeared to have left him. He sank back into the mass of Indian society, and was scarcely ever mentioned. Nor should we, indeed, have recalled his name from its obscurity, were it not associated in the Indian reminiscences of Leach lake, with this sanguinary deed.

I had this relation a few years ago, from a trader, who had lived at Leech lake, who personally linew the parties, and whose veracity I had no reason at all, to call into question. It is one of the elements that go into the sura of my personal observations, on asarage life, and as such I cast il among these papers. To judge of the Red race aright, we must view it, in all its phases, and if we would perform our duty towards them, as christians and men, we should gather our data from smanl, as well as great events, and from afar as well as near. When all has been done, in the way of such collections and researches, it will be found, we think, that their errors and crimes, whetever they are, assume no deeper dya than philanthropy has bad reason to apprehond them to take, without a knowledge of the principles of the gospel. Thou shate not kill, is a lew, yet to be enforced, among more than two hundred thoosand soulh, who bear the impress of a red skin, within the ackrowledged limits of the American Union.

## IMPROMPTU.

## On passing the Inn of "A Failing" on the Mohatok, in 1810.

Sare fortune's a bubble, and life is a joke,
Or fate would this man be assailing;
For pray where's the mortal who would not have hroke, If he'd forty long years been a-failing.

Men who sincerely desire peace, says Xenophon, ought not to expect from others a thorough compliance with their own demands, whilst they manifest a disposition to engroes all power to themselves

## THE MANITO TREE.

There is a prominent hill in the vicinity of Sault Ste. Maria, at lhe outlet of lake Superior, called by the French Lat Butte des Terres. An Indian footpath formeriy connected this hill with the old French settlement at those falls, from which it is distant about a mile. In the intermediate space, near the path, there formerly stood a trea, a large mountain abh, trom which, Indian tradition says, there issued a sound, resembling that produced by their own war-drums, during one of the most calm and cloudless days. This occurred long before the French appeared in the comotry. It was consequently regarded as the local residence of a spirit, and deemed sacred.

From that time they began to deposit at its foot, an offering of amnill green twigs and boughs, whenever they passed the path, so that, in process of time, $\mathbf{3}$ high pile of these offerings of the forest was accumulated. It seemed as if, by this procedure, the other trees had each made an offering to this tree. At length the tree blow down, during a violent stom, and has since entirely decayed, but the spot was recollected and the offerings kept up, and they would have been continued to the present hour, had not an accidental circumstance put a stop to it.

In the month of July 1822, the govemment sent a military force to tale post, at that ancient point of French settlement, at tho foot of the falls, and one of the first acts of the commanding officer was to order out a fatigne prorly to cut a wagon road from the selected site of the post to the hill This rad was directed to be cut sixty feet wide, and it passed over the site of the tree. The pile of offerings uras thus removed, without the men's unowing that it ever had had a superstitious origin; and thus the practice iteif came to an end. I had landed with the troops, and been at the place but nine dajs, in the exercise of my appropriate duties as an Agent on the part of the government to the tribe, when this trait of character was mentioned to me, and I was thus made porsonally acquainted with the locality, the cuuting of the road, and the final extinction of the rite.

Our Indians are rather prone to regard the coming of the white man, as fulflling certain obscure prophecies of weir own priests; and that they are, af beat, harbingers of evil to them; and with their usual belief in fatality, they tacitly drop such rites as the foregoing. They can excuse themselves to their consciences in such cases, in relinquishing the wormip of a local manito, by saying: in is the tread of the white man that hel desecrated the ground.

Many who praise virtue, nays the author of the Rambler, do no more than prise if

## NIAGARA, AN ALLEGORY.

An old grey man on a mountain lived, He had daughtera four and one, And a tall bright lodge of the betula bark That glitered in the sun.

He lived on the very highest top,
For lie wist a hunter frec,
Where he could spy on the cleareat day, Gleams of the distant aea.
Come out-come out! cried the youngest one,
Let us of to look at the sea,
And out they ran in their gryest roben, And skipped and ran with glee.
Come $\mathrm{Su},{ }^{*}$ come $\mathrm{Mi}, \dagger$ come $\mathrm{Hu}, \ddagger$ come $\mathrm{Sa}, \S$ Cried langhing litile Er. $\|$
Let us go to yander brond blue deep, Where the breakers foam and roar.

And on they senmpered by valley and wood, By earth and air and sky.
Till they catne to a fteep where the bare rocks atood.
ln a precipice mountan high.
Inyn :Tit cried Er, here's a dreadful leap,
But wer are gone so far,
That if we flinch and return in fear, Nos,** he will cry ha! ha!

Now each was clad in a veature light, That floated far behind,
With sandals of frozen water drops, And wings of painted wind.
And down they plunged widh a merry skip; Like bircls that akim the piain;
And hey! they cried. Jet we up and try And down die steep again.

And up and down the danghters skipped, Like girls on a holilay:
And laughed outright, at the aport and foam, They called Niagara.
If ye would seec a sight so rare, Where nature's in her glee,
Go, vicw the apot in the wide wild weat, The land of the brave and free.

But mark--thrir ghnpes are onfy seen In fincy's dcepest play,
But she plainly shewe their winga and feet In the dancing bunny epray.

# THE RED RACE OF AMERICA． 

PART FOURTH．

PERSONAL INCIDENTS AND IMPRESSIONS OF THE RED RACE， DRAWN FROM NOTES OF RESIDENCE AND TRAVEL IN THE IN－ DIAN TERRITORIES．

## dOMESTIC CONDITION OR THE TRIBES AND CONSTUTION OF THE INDIAN FAMILI．

Irourny II－What is the domestic condition and organization of the Indian family ？ Is the tie of consanguinity strong，and what characteristic facts can be stated of it ？ How are the domestic duties arranged？What are the rights of each inmate of the lodge ？How is order maintained in so confined a space，and the general relations of the family preserved？Are the relative duties and labours of the hunter and his wife，equally or unequally divided？Who builds the lodge，and how is it constructed？

There is a very striking agreement，in the condition，relative duties and obligations，of the Indian family，among all the tribes of whom I have any personal knowledge，in North America．Climate and position， the abundance or want of the means of subsistence and other accidental causes，have created gradations of condition in the various tribes，some of whom excel others in expertness，in hunting and war，and other arts，but these circumstances have done little to alter the general characteristics，or to abridge or enlarge the original rights and claims of each inmate of the lodge．The tribes who cultivated maize in the rich sub－vallies and plains of the Ohio and Mississippi，had fuller means of both physical and mental development，than those who were，and still are，obliged to pick a scanty subsistence，among the frigid，and half marine regions in the latitudes north of the great lakes．There are some peculiar traits of manners，in the prairie－tribes，west of the Mississippi，who pursue the bison on horse back，and rely for their subsistence greatly，on its flesh，and the sale of its skin．The well fed Muscogee，Cherokee，or Choctaw，who lived in the sunny vallies of upper Georgia，Alabama，and Tennessee，the robust Owage，revelling in the abundance of corn and wild meat，south of the

Missouri, and the lean and rigid Montaignes, Muskeego, and Kenisteno, who push their canoes through waters choked with aquatic weeds, and wild rice, present very different pictures of home and comfort, within their lodge doors. But they really present the same idea, the same sentiments, and the same round of duties and obligations, of father and mother, sister and brother, wife and husband. The original type of the human family among them, is well preserved, better, indeed, than was to have been expected in a state of barbarism, and among branches of the race who have been so long separated, and subjected to such severe vicissitudes. It would be useless, in this view, to draw a parallel between the relative condition of the members of a family, within, and without the pale of civilization. Nothing of the kind could be done, without showing up pictures of want in the hunter-life which are wholly unknown in the agricultural state. It cannot perhaps, in fair justice, be said that the tie of consanguinity, in the man of the woods, is stronger, than in civilized life. But it is in accordance with all observation to say, that it is very strong, that its impulses beat with marked force, and are more free from the intertwined ligaments of interest, which often weakens the tie of relationship in refined and affluent society.

The true idea of matrimony, in Indian life, is also well set forth and acknowledged, although it has come down through ages of plunder and wandering, degraded in its condition, shorn of its just ceremonies, and weakened in its sacred character. I have observed that polygamy, among the northern tribes, is chiefly to be found, among bands who are favourably located, and have the best means of subsistence. But even here it is not reputable ; it may often increase a man's influence in the tribe or nation, but there are always persons in the wildest forests, who do not think the practice right or reputable. In the worst state of Indian society, there are always some glimmerings of truth. If the conscience of the Red man may be compared to a lamp, it may be said to have rather sunk low into its socket, than actually to have expired. The relation between husband and wife, in the forest, are formed under circumstances, which are generally uniform. Various incidents, or motives determine a union. Sometimes it is brought about by the intervention of friends; sometimes from a sudden impulse of admiration ; sometimes with, and sometimes against the wishes of the graver and more prudent relatives of the parties. Where the husband is acceptable, and has not before been married, which covers the majority of cases, he comes to live for a while after marriage, in the lodge of his mother-in-law ; and this relation generally lasts until the increase of children, or other circumstances determine his setting up a lodge for himself. Presents are still a ready way for a young hunter to render himself acceptable in a lodge. There are some instances, where considerable ceremony, and the invitation of friends, have attended the first reception of the bridegroom, at the lodge; but these are in most
cases, what we should denominate matches of state, or expediency, in which the bravery, or other public services of a chief or leader, has inclined his village to think, that his merits deserve the reward of a wife. Generally, the acceptance of the visitor by the party most interested, and her mother and father, and their expressed, or tacit cnnsent, is the only preliminary, and this is done in a private way. The only ceremonial observance, of which I have ever heard, is the assigning of what is called an abhinos, or permanent lodge seat, to the bridegroom. When this has been done, by the mother or mistress of the lodge, who governs these things, he is received, and hencefort instalied as a constiuent member of the lodge and family. The siruple rule is, that he who has a right to sit by the bride, is her husband.

The lodge itself, with all its arrangements, is the preeinct of the rule and government of the wife. Sbe assigns to each member, his or her ordinary place to sleep and put their effects. These places are permanent, and only changed at her will, as when there is a guest by day or night: In a space so small as a lodge this system preserves order, and being at all times under her own eye, is enforced by personal supervision. The husband has no voice in this matter, and I have never heard of an instance in which he would so far deviate from bis position, as to interfere in thesa minor particulars. The lodge is her precinct, the forest his.

There is no law, nor force, to prevent an Indian from decreeing his own divorce, that is to say, leaving one wife and taking another whenever he sees cause. Yet it ofen occurs that there is some plausible pretext for such a step, such as if true, would form some justification of the measure The beat protection to married females arises from the ties of children, which by bringing into play the strong natural affections of the heart, and appeals at once to that principle in man's original organization, which in the strongest. The average number of children borne by the women, and which rcach the adult period is small, and will scarcely exceed two. On the pay rolls it did not exceed this. Much of this extraordinary result is owing to their erratic mode of life, and their cramped means of subsistence. Anotber cause is to be found in the accidenta and exposure to which young childen are liable, but still more to their shocking ignorance of medicine. I once knew a child at three years of age to be killed by an attempt to restore a deranged state of the bowele, by a strong overdoso of an astringeat tincture of hemolock bark administered by her father. This man, who was called Attuck, had strong natural affections, but he was very ignorant even in the eyes of the Indian race, being one of that people living N. E. of lake Superior, who are called variously Gens de Terres, Mountaineers, and Muskeegoes. Wherever the laws of reproduc tion are relieved from these depressing circumstances, the number of children is seen to be increased.

The chiof Iaba-Wuddick, who lived on a small bery at the foce of take

Superior, and had abundance of means of subaistence, had fourteen children by one wife. He was an excellent hunter, and of habits for the most par of his life, strictly temperate; he had married young, and had always had the means of providing his family with adequate clothing and food. Not one of these children died in infancy. He lived himself to be old, and died rather from a complaint induced by constitutional structure, than from a natural decay of vital power.

The duties and labours of Indian life, are believed to be equally, and not, as has been generally thought, unequally divided between the malo and female. This division is also the most notural possible, and such as muset ever resulf from the condition of man, as a mere hartor. It is the duty of the mate to provide food, and of the female to prepare it. This arrangement carries with it to the share of the male, all that relates to external concerns, and all that pertains to the internal to the care of the female as completely as is done in civilized life. To the man belonga not only the business of hunting, for this is an eaployment and not a pastive, but the care of the territory, and keeping off intruders and enemies, and the pro paration of canoes for travel, and of arms and implements of war. The duties of cooking and dressing meata and fowl, and whatever elaa the chase affords, carries on the other hand, to the share of the hunter's wifa, the entire care and controul of the lodge, with its structure and removal, and the keeping it in order, with all its utensils and apparatus. A good and frugal hunter's wife, makes all this a point of anmhitious intorest, and tukes a pride in keepiog it neat and proper for the reception of her hugbend's guests. She sweepa the earth clean around the fire, with a hroom of branches of the cedar constructed for this purpose. This lodge it is to be remembered, is made not of beams and posts, and heavy carpentry, but out of thin poles, such as a child can lif, set in the ground in a circle, bent over and tied at the op, and sheathed with long sheets of the white hirch bark. A rim of cedar wood at the bottom, assimilates these birch berk sheets to the roller of a map, to which in elormy weather a stone is attached to hold it firm This stick has also the precise use of a maproller, for when the lodge is to be removed, the bark is rolled on it, and in this shape carried to the canoe, to be set up elsewhere. The circla of eticks or frame, is always left standing, as it would be useless to encumber the canoe with what can easily be had at any poaition in a foreat country.

Such at least is the hunting lodge, and indeed, the lodge generally used by the tribes north of lattirude $\mathbf{4 2}^{\circ}$. It is, in its figure, a half globe, and by ius lightness and wieker-like structure, may be sald to resemble an inverted hird's nest. The whole amount of the transportable materials of is, is often comprehended in some half a dozen good rolls of bark, and as many of rush mata which the merest girl can easily lift. The mata which ere the substitute for floor cloth, and also the under erarum of the aleep-
ing couch, are made out of the common lacustris or bullrush, or the flag, cut at the proper scason, and woven in a warp of fine hemp net thread, such as is furnished by traders in the present state of the Indian trade. A portion of this soft vegeable woof, is dyed, and woven in various colours. Lodges thus constructed are to be still abundantly seen, by the summer visitor, in the upper lakes, at all the principal points, to which the Indians resort, during the height of summer. Such are the poets of Michilimackinac, Sault Ste. Marie, and Green Bay. At Michilimackinac, where it is now difficult to get fresh lodge poles, without going some distance, or trespassing on private rights, the natives who resor the ther, of late years, have adopted an ingenious change, by which two objects are accomplished at the same time, and the habour of the females dispensed with in getting new poles. It is known, that the bark canoe, being itself hut an enlarged species of wicker work, has not sufficient srength to be freighted, without previously having a number of poles laid longitudinally, in the bottom, as a kind of vertebral support These poles on landing upon the gravelly shores of that island, are set up, or stacked to use a military phrase, that is tying the tops together and then drawing out the other ends so as to describe a circle, and thus making a perfect cone. The bark tapestry is hung around these poles very much as it would be around the globular close lodges; and by this arrangement, an Indian lodge is raized, and ready for occupation, in as many minutes, after landing, as the most expert soldiers could pilch a tent in.

Before we can affirm that the labeur of preparing these barks and mate and setting up, and taking down, the lodge, is disproportionately great, or heavy on the females, it will be necessary to inquire into other pariculars, both on the side of the male aod female. Much of the time of an Indian female, is passed in idlenesas. This is true not only of a part of every day, but is emphatically so, of certain seasons of the year. She has no: like the farmer's wife, her cows to milk, her butter and cheese to make, and her flax to apin. She hes not to wash and comb and prepare ber children every morning, to go to school. She has no extensive or fine wardrobe to take care of. She has no booke to rend. She sels little value on time, which is characteristic of a!l the race. What she does, is either very plain sewing, or some very pains taking omarnental thing. When the sheathing and flooring of the lodges are once made, they are permanent piecea of propery, and do not require frequent renewal When a skin has been dressed, and a garment made of it, it is worn, till it is worn out. Frequent ablution and change of dress, are eminently the traits of high eivilization, and not of the hunter's lodge. The aricles which enter into the mysteries of the laundry, add but linie to the cares of a forest bousekeeper. With every industrial affort, and euch is, somtimes the case, there is much unoccupied time, while her husband is compelled by their necessities, to traverse large tractes, and endure
great fatigues, in all weathers in quest of food. He must defend his hunting grounds, in peace and war, and has his life daily in his handsLong absences are often necessary, on these accounts. It is at such times, during the open season, that the Indian female exerts her industry. In the fall season, she takes her children in a canoe, or if she have none, invites a female companion to go with her, along the streams, to cut the rush, to be manufactured into mats, at her leisure, in the winter. It is also a part of her duty, at all seasons, to provide fuel for the lodge fire, which she is careful to do, that she may suitably receive her husband, on his return from the chase, and have the means of drying his wet moccasins, and a cheerful spot, where he may light his pipe, and regain his mental equilibrium, while she prepares his meals. The very idea of a female's chopping wood, is to some horriffic. But it is quite true that the Indian female does chop wood, or at least, exert an undue labour, in procuring this necessary article of the household. In speaking of the female, we, at once, rush to the poetic idea of the refinement of lady like gentleness, and delicacy. Not only does the nature of savage life and the hardiness of muscle created by centuries of forest vicissitude, give the hunter's wife, but a slender claim on this particular shade of character, but the kind of labour implied, is very different from the notion civilized men have of "wood chopping." The emigrant swings a heavy axe of six pounds weight, incessantly, day $i n$, and day out, against immense trees, in the heaviest forest, until he has opened the land to the rays of the sun, and prepared an amount of cyclopean labours for the power of fire, and the ox. The hunter clears no forests, the limits of which on the contrary, he carefully cherishes for his deer to range in. He seats himself down, with his lodge, in the borders of natural glades, or meadows, to plant his few hills of maize. He had no metallic axe, capable of cutting down a tree, before 1492 , and he has never learned to wield a heavy axe up to 1844 . His wife, always made her lodge fires by gathering sticks, and she does so still. She takes a hatchet of one or two pounds weight, and after collecting dry limbs in the forest, she breaks them into lengths of about 18 inches, and ties them in bundles, or faggots, and carries them, at her leisure, to her lodge. Small as these sticks are, in their length and diameter, but few are required to boil her pot. The lodge, being of small cir cumference, but little heat is required to warm the air, and by suspending the pot by a string from above, over a small blaze, the object is attained, without that extraordinary expenditure of wood, which, to the perfect amazement of the Indian, characterizes the emigrant's roaring fire of logs. The few fields which the Indians have cleared and prepared for corn fields, in northern latitudes, are generally to be traced tosome adventitious opening, and have been enlarged very slowly. Hence, I have observed, that when they have come to be appraised, to fix their value as improvements upon the land, under treaty provisions, that the amount thereof may be paid the
owner, they have uniformly set a high estimate upon these ancient clearings, and sometimes regarded their value, one would think, in the inverse proportion of these limits. As if, indeed, there were some meril, in having but half an acre of cleared ground, where, it might be supposed, the owner would have cultivated ten acres. And this half acre, is to be regarded as the industrial sum of the agricultural labours of all ages and sexes, during perhaps, ten generations. Could the whole of this physical effort, therefore, be traced to female hands, which is doubfful, for the old men and boys, will often do something, it would not be a very severe imposition. There is at least, a good deal, it is believed, in this view of the domestic condition of the women to mitigate the severity of judgment, with which the proud and labour-hating hunter, has sometimes been visited. He has. in our view, the most important part of the relative duties of Indian life, to sustain. In the lodge he is a mild, considerate man, of the non-interfering and non-scolding species. He may indeed, be looked upon, rather as the guest of his wife, than what he is often represented to be, her tyrant, and he is often only known as the lord of the lodge, by the attention and respect which she shows to him. He is a man of few words. If her temper is ruffled, he smiles. If he is displeased, he walks away. It is a province in which his actions acknowledge her right to rale ; and it is one, in which his pride and manliness have exalted him above the folly of altercation.

## TO HOPE.

ET THE LATE JOHN JOHNETON EAC.
Hope, deceiver of my soul, Who with lares, from day to day Hast permitted years to roll, Almost unperceived away.

Now no longer, try thine art, Fools alone, thy power shall own, Who, with simple vacant heart, Dream of bliss to mortals known.

Every effort have I try'd All that reason could suggest,
Cruel! cease then to deride, One, by fortune still unblest.

Ah! yet stay, for when thou'rt gone, Where shall sorrow lay her head, Where, but on the chilling stone, That marks the long forgotten dead.

# SCENES AND ADVENTURES 

IN THE OZARK MOUNTAINS.

(Continued from Part 3.)

## CHAPTER IV.

#### Abstract

Hearany information of the hanters turas out falso-We altor our coures-A bear hanl-An accident-Another rencontre with bear-Strike the sonres of the Greal Nort Fork of White River-Journey down this valley-Ita character and productions -A great Spring-Incidents of the roato-Pack honse rolla down a procipies--PIngete in the rivar-A cavern-Onage lodges-A hunter's hat

It was now manifest, from our crossing the last two streams, that wo were going too far north-bat we were in fact in the valley of the Misouri proper; and that the information obtained of the hunters on the source of the Merrimack, was not to be implicitly relied on. It is not probable that one of the persons who gave this information had ever been here. It wes a region they were kept out of hy the fear of the Osgees, as our own axperience in the case of Roberts denoted. Willing to test it farther, however, we followed down the last named stream a fow miles, in the hope of ite turniag south or south-west, hut it went off in another direction. We then came to a halt, and after consulting together, ateered our course due south south-west, thus varying our general course from the caves. This carried us up a long range of wooded bighlands. The forest here assumed a handsome growh. We passed through a track of the over-eup oak, interspersed with hickory, and had reached the summit of an elevated wooded ridge, when just as we gained the highest point, we discavered four bears on a large oak, in the valley before us. Thres of the number were probably cubs, and with their dam, they were regoling thenselves on the ripe acorns without observing us. We had sought no opportunities to hunt, and given up no especial time to it, but here was too fair a challenge to be neglected. We tied our horse securely to a sepling, and then exanining our pieces, and puting down an extra ball, set out to descend the hill as cautiously as possible. An unlucky alip of Enobiti threw him with force forward and sprained his ankle. He lay for a short time in agony. This noise alarmed the beare, who one after the other quickly ran in from the extremilies of the limba to the trunk, which they descended
head firmo, and scampered ctamsily off op the valley. I porsued them without minding my companion, no knowing, indeed how badly he was burn, but was compelled to give up the chase, as the tall grame finally provented my seeing what course they had taken. I now returned to my companion. He could not etand at first, nor walk when he arose, and the first agony had passed. I propoeed to mount him on the pack horse, and lead him slowly up the valley, and this plan wes carried into effect But he endured too much auffering to bear even this The ankle began to inthame. There was nothing bat rest and continoed repose that promised relief. I colected a fine grassy spot to encamp, unpacked the horse, buik a fire, and got my patient comfortably stretched on mis pallet But little provision had been made at Potoci in the medical departuent. My whole more of pbarmacy consised of some pills and salves, and a few simplo articles. The only thing I could think of as likely to be serviceable, was in our culinary pack,-it was a little sack of salt, and of this I made a colution in warm weter and bathed the ankle. I then replenished the fire and cut some wood to renew it. It was sill early in the day, and leaving my companion to rest, and to the effect of the remedy offered, I cook my gun and atrolled over the adjoining bills, in hopes of bringing in come pigeons, or other amall game. But it was a time of diny when both birds and quadrupeds have finished their mornings repast, and retired to the grovee or fampesses. I saw nothing bat the litte grey buntiog, and the noisy jay. When I returned to our camp io the vale I found my companion easier. The bathing had sensibly alleviated the pain and awelling. It was therefore diligently renewed, and the next morning he was so far improved, that he consented to try the pack horse again. We had not, however, travelled far, when two large bears were scen before us playing in the grass, and so engaged in their sport, that they did not perceive us We were now on the same level with them, and quickly prepared to give them battle. My companion diemounted as easily as possible, and having secured the horse and emamined our arros, we reached a stand within firing distance. It was not ill this moment that our approach was diacovered by them, and the first thing they did after running a few yards, was to ait up in the grass and gaze at us. Having each singled his animal, we fired at the same instant Both animals fled, but on reaching the spot where my marls had sat, blood was copiousty found on the grass, and a pursuit way the consequence. I followed him up a long ridge, but he passed over the nommit so far before me, that I lost aight of him. I came to a large hollow blacts oalc, in the direction he bad disappeared, which showed the nail marks of some enimal, which 1 believed to be bis. While exsmining tbese signs more closely my companion made his appearance. How he had got there I know not The excitement had well righ cured his ancle. Ho stood by the orifice, while I went for the are to our camp, and when 1 was lired chopping, he laid hoid.

We chopped alternately, and big as it was, the tree at last came down with a crash that made the forest ring. For a few moments we looked at the huge and partly broken trunk as if a bear would start from it ; but all was silence. We thoroughly searched the hollow part but found nothing. I went over another ridge of forest land, started a noble elk, but saw nothing more of my bear. Here terminated this adventure. We retraced our footsteps back to the valley, and proceeded on our route. This incident had led us a little south of our true course; and it so turned out that it was at a point, where a mile or two one way or the other, was calculated to make a wide difference in the place of our exit into the valley of White River ; for we were on a high broken summit ridge, from which several important streams originated. The pursuit of the bear had carried us near to the head of the valley, and by crossing the intervening summit, we found ourselves at the head springs of an important stream, which in due time we learned was the Great North Fork of White River. This stream begins to develope itself in pools, or standing springs, which soak through the gravel and boulders, and it is many miles before it assumes the character of a continuous stream. Even then it proceeds in plateaux or steps, on which the water has a level, and the next succeeding level below it has its connection with it, through a rapid. In fact, the whole stream, till near its mouth, is one series of these lake-like levels, and short rapids, each level sinking lower and lower, till, like the locks in a canal, the last flows out on a level with its final recipient. But however its waters are tongregated, they are all pure and colourless as rock crystal, and well vinsicate the propriety of their original name of la Rivière Blanc. They all originate in mountain springs, are cool and sparkling, and give assurance in this feature, that they will carry health to the future inhabitants of the valley through which they flow. With the first springs begins to be seen a small growth of the cane, which is found a constant species on its bottom lands. This plant becomes high in more southern latitudes, and being intertwined with the green briar, renders it very difficult, as we soon found, to penetrate it, especially with a horse. Man can endure a thousand adventures and hardships where a horse would die; and it would require no further testimony than this journey gave, to convince me, that providence designed the horse for a state of civilization.

We followed the course of these waters about six miles, and emcamped. It was evidently the source of a stream of some note. It ran in the required direction, and although we did not then know, that it was the valley of the Great North Fork of White River, we were satisfied it was a tributary of the latter stream, and determined to pursue it. This we did for twelve days, before we met with a human being, white or red. It rapidly developed itself, as we went, and unfolded an important valley, of rich soil, bearing a vigorous growth of forest trees, and enclosed on either hand, by elevated limestone cliffs. Nothing could exceed the purity of
ins waters, which bubbled up in copious springs, from the rock, or peble stratura. For a long distance the atream increased from such acceseiona alone, without large and independent tributaries. On the second day', travel, we came to a spring, of this crystal character, which we judged to be about fify feet across, at the point of its issue from the rock and soil Its outlet after running about a thousand yards, joined the main stream, to which it brings a volume fully equal to it Tbis spring I named the Ell Spring, from the circumstance of finding a large pair of the horns of thia animal, partly buried in the leaves, at a spot where I stcoped down to drink. I took the horns, and hung them in the forks of a young oak tree.

We found abundance of geme in this valley. There was not en entire day, I think, until we got near the bunters' campe, that we did not see euher the bear, ellc, or deer, or their recent signs. Flocks of the wild turkey were of daily occurrence. The gray squirrel frequently sporied on the trees, and as the stream increased in size, we found the duck, brant and swan.

There were two serious objections, however, in travelling down a wooded valley. Ita shrubbery was so thick and rank that it was next to impossible to force the peck horse through it. Wherever the cane abounde, and this comprebends all its true alluvions, it is found to be matued together, as it were, with the green briar and grape vine. So much noive attended the effort al any rate, that the geme generally fled before us, and had it not been for small game, we should bave often wanted a meal With every effor, we could not make an average of more than fourteen miles a day. The river was so tortuous too, that we could not count, on making more than balf this distance, in a direct line. To remedy these evils we sometimes went out of the vallay, on the open naked plains. It was a relief, hut had, in the end, these difficulties, that while the plaina exponed us to greater beats in travelling, they afforded no water, and wo often lost much time in the necessity, we were under, towards night-fall, of going back to the valley for water. Neither was it found to be safo to travel far separated, for there were many causes of accident, which rendered mutual assistance desirable. One day, while Enobiti led the horse, and was conducting him from a lofly ridge, to ges into the valley, the aaimal stumbled, and rolled to the botom. We thought every bone in his body had been broke, but he had been protected by bis pack, and we found that be was but little injured, and when repacked, still capable of going forward. On anotber occasion, I had been leading bim for several hours, along a high torrace of cliffis on the left banka where this terrace was, as it were, suddenly cut off by the interrection of a lateral valley. The view was a sublime one, standing at the pinoacle of junction; hut there wae no possible way of descent, and it was neces. sary to retrace my steps, a long-long way. As an instance of the very
tortuous character of this stream, I will mention that a rocky peninsula, causing a bend which it took my companion some two hours to pass, with the horse, I had crossed in less than twenty minutes, with my hammer and gun. When we had, as we supposed, become familiar with every species of impediment and delay, in descending the valley, a new, and very serious and unexpected one, arose one day, in crossing the stream, from the left to the right bank. It was my turn to be muleteer that day, and I had selected a ford where the river was not wide, and the water, apparently, some two or three feet deep. I judged from the clearness of the pebbles at the bottom, and their apparent nearness to the surface. But such was the transparency of the water, that a wide mistake was made. We had nearly lost the horse, he plunged in over head, could not touch bottom, and when with great ado, we had got him up the steep bank on the other side, he was completely exhausted. But this was not the extent of the evil. Our sugar and salt were dissolved. Our meal, of which a little still remained, was spoiled. Our tea was damaged,-our blankets and clothing wetted,-our whole pack soaked. The horse had been so long in the water, in our often fruitless efforts to get him to some part of the bank depressed enough, to pull him up, that nothing had escaped its effects. We encamped on the spot, and spent the rest of the day in drying our effects, and expelling from our spare garments the superfluous moisture.

The next day we struck out into the high plains, on the right bank, and made a good day's journey. The country was nearly level, denuded of trees, with sere autumnal grass. Often the prairie hen started up, but we saw nothing in the animal creation beside, save a few hares, as evening came on. To find water for the horse, and ourselves, we were again compelled to approach the valley. We at length entered a dry and desolate gorge, without grass or water. Night came on, but no sound or sight of water occurred. We were sinking deeper and deeper into the rocky structure of the country at every step, and soon found there were high cliffs on either side of us. What we most feared now occurred. It became dark, the clouds had threatened foul weather and it now began to rain. Had it not been for a cavern, which disclosed itself, in one of these calcareous cliffs, we must have passed a miserable night. On entering it, we found a spring of water. It was too high in the cliff to get the horse in, but we carried him water in a vessel. He was afterwards hobbled, and left to shift for himself. On striking a fire, in the cave, its rays disclosed masses of stalactites, and a dark avenue into the rocks back. Having made a cup of tea and finished our repast, we determined to explore the cave before lying down to rest, lest we might be intruded on by some wild animal before morning. A torch of pine wood was soon made, which guided our footsteps into the dismal recess, but we found nothing of the kind. On returning to our fire, near the mouth of the cave, we found the rain had increased to a heavy shower, and the vivid flashes of
lightning, illumined with momentary brilliancy, the dark and frowaing precipices of this romantic gorge. The excitement and novelty of our position, served to drive away sleep, notwithatanding a long day's march, and it was late before we sought repose.

Morning brought a clear aky, but the horse was gone. He had followed on the back track, up the glen, in search of something to feed upon, and was not found till we reached the skins of the plains. The whole morming was indeed, lost in reclaiming him, and we then mer forward again and returned to the North Forlv raliey. We found it had amoumed a greater expanse, at the point of our reeary, which it maintained, and increased, as we pursued it down. Wide open oak plains extended on the left bank, which appeared very eligible for the parposes of essulement On an oak tree, at this spot, we obeerved some marks, whith had probably been made by some enterprising land explorer. Wibt theso improved evidences of its character for future occupation, we found the travelling easier. Within a few miles travel, we noticed a tributary coming in on the lefi bank, and at a lower point another on the len The first otream had this peculiarity, that its waters came in at a right angle, with the parent stream, and with such velocity as to pass directly acrass its chanall to the opposile bank. In this vicinity, we saw many of the deserted pole camps of the Osages, none of which appeared, however, to have been recently occupied. So far, indeed, we had met no bindrance, or annoyance from this people; we had not even encountered a single member of the tribe, and felt assured that the accounts we bad received of their cruelty and rapacity, had been grossly axaggerated, or if not wholly overcoloured, they must have related to a period in their history, which was now well nigh past We could not learn that they had bunted on these lands, during late years, and were afterwards given to understand that they had ceded them to the United Statee by a treaty concluded at St. Louis. From whatever causes, however, the district had been left free from their roving partics, it was certain that the game had recovered under such a cessation of the chase. The black bear, deer and elk, were shundant. We also frequently saw signe of the labours of the beaver along the valley. I bad the good luck, one day, while in advanie with my gun, of beholding two of these animals, at play in the stream, and observing their graceful motions. My position was, within point blank shot of them, but I was screened from their gaze. I sat, with gun cocked, meaning to secure one of them afier they came to the shore. Both animals came out togetber, and sat on the bank at the edge of the river, a ledge of rocks being in the rear of them. The noveky of the sight led me to pause, and admire them, when, all of a audden, they darted into a crevice in the rock.

On the second day after reentering the ralley, we deacried, on descending a long slope of rising ground, a hanter's cabin, covered with narrow
oak boards, aplit with a frow ; and were exhilarated with the idea of finding it occupied. But this turned out a delusive hope. It had been deearted, from appearance, the year before. We found, among the surrounding weeds, a few stems of the cotton plant, which had grown up from seeds, accidentally dropped. The bolls had opened. I picked out the cotton to serve as a material in lighting my camp fires, at night, this being a labour which I had taken the exclusive management of. The site of this camp, had been well chosen. There was a small stream in front, and a heary rich cane bottom behind it, extending to the banks of the river. A handsome point of woodlands extended north of it, from the immediate door of the camp. And although somewhat early in the day, we detarmined to encamp, and soon made ourselves mastera of the fabric, and sat down before a cheerful fire, with a tide to occupancy, which there wat no one to dispute.

## THE BIRD.

VRBEIFIED FHOM THE GEHYAN OF GESSNDR: 1812.
A swain, as he strayed through the grove,
Had caught a young bird on a spray-
What a gift, he exclaimed, for my love,
How beautiful, charming, and gay.
With rapture he viewed the fair prize, And listened with joy to its chat, As with baste to the mendow he hien To secure it benealh his straw hat

I will make of yon willows so gay, A cage for my prisoner to moum, Then to Delis, the gift I'll convey, And beg for a kiss in return.

She will grant me that one, I am sure,
For a present so rare and 90 gay, And I easily can steal a few more And bear them enraptured awny.

He returned: but imegine his grief, The wind had his hat overthrown, And the bird, in the joy of relier, Away with his lisses had flown. H. R. 8

## HISTORY 0F THE RACE.

## WYANDOT TRADITIONS OF THE CREATION, AND OTHER EPOCHS

Tae following traditions of the creation of man, and of the Red Race: of the order of precedence and relationship among the tribes, and the no tice of the first arrival of Europeans on the continent, together with the allegories of Good and Evil, and of Civilization and Barbariam, are ar. tracted from a private journal, kept during the period of my official intercourae with the verious tribes.

Superintendency Indian Affairs,
Detroit, January 30th, 1837.
A delegation of three $W$ yandot chiefs visited me, this day, from their location near Amheratburg in Canada, with their interpreter, George C. Martin. Their names were O-ri•wa-bento, or Charlo, On-bato-tun-youh, or Round Head, son of Round Head, the brother of Splitlog, and Tyer on-youh, or Thomas Clark. They informed me, in reply to a question, that the present population of their band, at that location, was eighty-tix souls. After transacting their business, I proposed several questions to them respecting their origin and history.

1. What is the origin of the Indians? We believe that all men sprang from one man and woman, who were made by God, in parts beyond the sea. But in speaking of the Indians we say, how did they cross the sea without ships? and when did they come? and from what country? What is your opinion on the subject?

Oriwahento answered: "The old chief, Splitlog, who could answer yon, is not able to come to see you from his age and feebleness; but he has sent us three to speak with you. We will do the best we can. We are not ahle to read and write, like white men, and what you ask is not therefore to be found in hlack and white." (This remark was probably made as they observed I took notes of the interview.)
"There was, in ancient times, something the matter with the earth. It has changed. We think so. We believe Cod created it, and made men out of it We think he made the Indians in this country, and that they did not come over the sea. They were created at a place called Mons-
tains. It was eastward. When he had mode the earth and those mountains, be covered something over the earth, as it were, with his hand. Below this, he pui man. All the different tribes were there. Oue of the young men found his way out to the surface. He saw a greal light, and was delighted with the beauty of the surface. While gazing around, he saw a deer running past, with an arrow in his side. He followed it, to the place where it fell and died. He thought it was a harmons looking animal. He looked back to see its tracks, and he soon sapr other trackra They were the foot prints of the person who had thot the deer. He soon came up. It was the creator himself. He had taken this mathod to show the Indians what they must do, when they came out from the earth The creator showed him how to skin and dress the animal, bidding him do so and so, as he directed him. Wben the flesh was ready; he told hin to make a fire. But he was perfectly ignorant. God made the fire. He then directed him to put a portion of the meat on a stick, and roast it before the fire. But he was so ignorent that he let it stand till it hurned on one side, while the other was raw.

Having taught this man the hunter's att, so that he could teach it to ohers, God called the Indians forth out of the earth. They came in order, by trihes, and to each tribe he appointed a chief. He appointed one Head Chief to lead them all, who had something about his neck, and he instructed him, and put it into his head what to say to the triber That he migbt have an opportunity to do so, a certain animal was killed, and a feast made, in which they were told to eal it all. Tbe leader God had so chosen, told the tribes what they must do, to please their maker, and what they must not do.

Oriwnbento further said : Grod also made Grood and Evil. They were brothers. The one went forth to do good, and eaused pleasant things to grow. The other busied himself in thwarting bis brocher's work. He made stony and flinty places, and caused bad fruita, and made continual mischief among men. Good repaired the mischief as fast as it was done, but he found his labour never done. He determined to fly upon his brother and dessroy him, but not by violence. He proposed to run a race with bim. Evil consented, and they fixed upon the place. But first tell me, said Good, what is it you most dread. Bucks borns 1 replied he, and tell me what is most hurtful to you. Indian grass braid! said Good. Evil immediately went to his grandmother, who made braid, and got large quantities of it, which be put in the patb and bung on the limber that grew by the path where Good was to run. Grood also filled the path of his brother with the dreaded horns. A question arose who should run firal I, said Grood, will begin, ziuce the proposition to try our skill first came from me. He accordingly set out, his brother following him. But e he begun to feel exhausted at nocn, be took up the grase braid and eat in This sustained hirn, and be tired down his brother before aight, who
ontreated him to stop. He did not, however, cease, till he had succesefuly reached the goal.

The next day Evil started on his path. He was enconntered every where by the horns, which before noon bad greatly weakened him He entreated to be relieved from going on. Good insisted on bis ranning the course. He sactained bimself 'till sunset, when he fell in the path, and was finally dispatched by one of the horns wielded by his brother.

Good now returned in triumph to his grandmother's lodge. But ahe was in an ill bumour, as she alwayz was, and hated him and loved bis brokher whom he bad killed. He wanted to rest, hut at night was awoks by a conversation between her and the ghoet of Evil. The latter pleaded to come in, but altbough he felt for bim, he did not allow his froternal feelings to get the better, and resolutely denied admission. Then said Evil"I go to the north-west, and yot will never see me more, and all who follow me will be in the same state. They will never come back. Death will for ever leep them."

Having thus rid bimself of his adversary, be thought be would wall out and see how things were going od, since there was no one to oppose his doing good. After travelling some time he sav a living object a-head. As he drew nearer, he saw more plainly. It was a naked man. They began to taik to each other, "I am walling to see the creation, which I have made," said Good, "but who are you ?" "Clothed man," said be, "I am as powerful as you, and have made all that laud you see." "Naked man," he replied, "I have made all things, but do not recollect making you." "You shall see my power," said the naked man, "we will try strength. Call to yonder mountain to come here, and afterwards I will do the same, and we will see who has the greatent power." The clothed man fall down on his knees, and began to pray, but the effort did not succeed, or bat partially. Then the nalred man drow a rattle from bis belt, and began to shake it and mutter, having first blindfolded the other. After a time, now said he, "look!" He did so, and the mountain stood close before him, and rose up to the clouds. He then blindfolded him again, and resumed his ranle and muttering. The mountain had reaumed its former diskant position.

The clothed man beld in his left hand a sword, and in his right hand the faw of God. The naled men had a ratie in one hand, and a war club in the other. They exchanged the knowledge of the reapective useet of these things. To show the power of the sword, the clothed man cut of a rod, and placed it before bim. The nalred man immediately put the parts together and they were healed. He then took his club, which wet flat, and cut off the rod, and again healed the mutilated parts. He relied on the rattle to answer the same purpose as the oher's book. The cloxhed man tried the use of the club, but could not use it with slidl, while the maked man wok the sword and used it as well as the other.

Oriwabento continued:-It is said that Evil killed his moker at his birth. He did not enter the world the right way, but bursted from the womb. They took the body of the mother end laid it upon a scafold. From the droppings of her decay, where they fell on the ground, sprang up corn, tobacco, and such oher vegetable productions as the Indians heve. Hence we call com, our mother. And our tohacco propagates itself by spontaneous growth, without planting; but the cloched man is required to labour in raising it.
Good found his grandmother in no better humor when he came back from the interview with the naked man. He therefore took and cast bet ap, and she flew against the moon, upon whose face the traces of her are still to be seen.
This comprised the first interview; after a recess during which they were permitted to refresh themselves and smoke their pipes, I returned to the office and resumed the inquiries.
2. Where did your tribe firs see white men on this continent? The French say you lived on the SL. Lawrence, and afterwards went to the north, from whence you afterwards came down to the vicinity of Detroit: That you possess the privilege of lighting up the general council fire for the Lake tribes; and that you were converted to the catholic faith. Oriwahento again answered.

When the tribes were all selled, the $\mathbf{W}$ yandots were placed at the bead They lived in the interior, at the mountains east, about the St. Lawrence. They were the first tribe of old, and had the first chieftainship. The chief said to their nephew, the Lenapees, Go down to the sea coast and look, and if you see any thing bring mee word. They had a village near the sea side, and often looked, but saw nothing except birds. At length they espied an object, which seemed to grow and come nearer, and nearer. When it came near the land it stopped, but all the people were afraid, and fled to the woods. The next day, two of their number ventured out of look. It was lying quietly on the water. A smafler object of the samp sort came out of it, and walked with long legs (oars) over the water, When it came to land two men came out of it. They were different from us and made signs for the others to come out of the woods. A conference ensued. Presents svere exchanged. They gave presents to the Lenapees, and the latter gave them their skin clothes as curiosities. Three distinct visits, at separate times, and long intervals, were made. The mode in which the white men got a fouting, and power in the country was this. First, room was asked, and leave given to place a chair on the shore. But they soon began to pull the lacing out of its hottom, and go inland with it; and they have not yet come to the end of the string. He exemplified this original demand for a cession of territory and its ro newal at oher epocbs, by other figures of speech, namely, of a bull's hide, and of a man walking. The first request for a seat on the
abore, was made he said of the Lenapees; alluding to the cognata branches of this stock, who were anciently setuled at the harbour of New York, and that vicinity.

To the question of their fight from the St Lawrence, their settlement in the north, and their subsequent migration to, and setulemeut on, the straits of Detroi, Oriwahento said:

The Wyandots were proud. God bad said that such should be beaten and brought low. This is the cause why we were followed from the sost, and went up north awny to Michilimackinac, but as we had the right before, 50 when we came back, the tribes looked up to us, as holding the council fre. ${ }^{\text {. }}$
3. What relationship do you acknowledge, to the other western tribee ?

Adswer by Oriwzhento: We call the Lenapees, nephews; we call the Odjibwas (Chippewas) Otamas, Mirmis Re. Younger Brother. We call the Bhawnees, the Youngest Brother. The Wyandotes were the firt tribe in ancient times The first chieflainship was in their tribe.

## SUPPLEMENTARY QUESTIONS TO THE INTERPRTER.

1. Are the Wyandot and Mohawk languages, alike in sounds. You say, you speak both.

Ans. Not at all alike. It is true there are a few words so, but the two languages do not seem to me more akin than English and French. You know some English and French words are alike. The Mohawk langrage is on the fongue, the Wyandot is in the throat.
2. Give me some examples : Read some of this translation of the Mohawk, (handing him John's Gospel printed by the American Bible Society in 1818.) He complied, reading it fluently, and appearing to have been acquainted with the translation.

Further conversation, in which his attention was drawn to particular facts in its structure and principles, made him see stronger analogies between the two tongues. It was quite evident, that he had never reflected on the subjech, and that there were, both grammatically, and philologically, coincidences beyond bis depth.

[^18]
## NURSERY AND CRADLE SONGS OF THE FOREST.

The tickeangun, or Indian cradle, is an object of great pride with an Indian mother. She gets the finest kind of broad cloth abe poosibly can to make an outer swathing band for it, and spares no pains in ornamenting it with beads and ribbons, worked in various figurea In the lodgan of those who can afford it, there is no article more abowy and pretty than the full bound cradle. The frame of the cradle iself is a curiosity. It consists of three pieces. The vertebral board, which supports the back, the hoop or foot-board, which extands tapering up each side, and the arch or bow, which aprings from each side, and protects the face and head These are tied logether with deer's sinews or pegged. The whole structure is very light, and is carved with a knife by the men, out of the linden or maple tree.

Moss constitutes the bed of the infant, and is also put between the child's feet to keep them apart and adjust the shape of them, according to custom A one-point blanket of the trade, is the general and immediate wrapper of the infant, within the boop, and the ornamented swathing band is wound around the whole, and gives it ne little resemblance to the case of a small mummy. As the bow passes direcly above the face and cyes, trinkets are often bung upon this, to amuse it, and the child geta is first ideas of ornament from these. The bands are generally bound down with the body, and only let out occesionally, the bead and neck being the only part which is actually free. So hound and laced, hooped and bowed, the little fabric, with its inmate, is capahle of heing swung on its mocher's hack, and carried through the thickest forest without injury. Should it even fall no injury can bappen. The bow protects the only exposed part of the frame. And when she stops to rest, or enters the lodge, it can he set anide like any other bousebold aricle, or hang up by the cradle strap on a peg. Nothing, indeed, could be better adapted to the exigencies of the forest life. And in such tiny fabrics, so cramped and bound, and bedecked and trinketed, their famous Pontiacs and King Philips, and other prime warriors, were once carried, notwitbstanding the skill they afterwards aequired in wielding the lance and war club.

Tbe Indian cbild, in truth, takes its first lesson in the art of onduraxce, in the cradle. When it cries it need not be unbound to nurse it. If the mother be young, she musr put it to sleep herself. If she have younger sisters or daugbters they share this care with her. If the lodge he roomy and higb, as lodges sometimes are, the cradle is suspended to the top polen
to be swung. If noh or the weather be finc, it is tied to the limb of a tree, with small cords made from the inner bark of the linden, and a inbratory motion given to it from head to foot by the mother or some atuendant. The motion thus communicated, is that of the pendulum or common swing, and may be supposed to be the easiest and most agreeable possible to the child. It is from this motion that the leading idea of the cradic song is taken.
I have ofien seen the red mother, or perhapa a sister of the child, lejsurely swinging a pretty ornamented crade to and fro in this way, in order to put the child to sleep, or simply to amuese it The following specimens of these wild-wood chaunt, or wigwam lullabys, are taken from my notes upon this subject, during many years of familiar intercourse with the aboriginals. If they are neither numerous nor atractive, placed side by side with the rich nursery stores of more refined life, it is yet a pleasant fact to have found such things even existing nt all amongst a people mpposed to posesse so fow of the amenities of life, and to have so lintle verestility of character.

Meagre as theae epecinens seem, they yet involve no small degree of philological diligence, as nothing can be more delicate than the inflexions of these prety chaunte, and the Indian woman, like ber white sister, givea a delicacy of intonation to the rougheat words of her language. The term wa-we ofien introduced denotes a wave of the air, or the circle deecribed by the motion of an object through it, as we say, swing, swing, a term never applied to a wave of water. The latter is called tegoo, or if it be crowned with foam, beta.

In introducing the subjoined specimens of these simple see saws of the lodge and forest chaunts, the writer felt, that they were almost too frail of scructure to be trusted, without a gente hand, amidet his roagher materials. He is permitted to say, in regard to them, that they have been exhibited to Mrs. Elizabeth Oakes Smith, herself a refined enthusinst of the wooda, and that the versions from the original given, are from her chaste and truthful pen.

In the following arch little song, the reader has only to imagine a playfol girl trying to put a resless child to sleep, who pokes its little hesd, with btack hair and keen eyes over the side of the cradle, and the girl singe, initating jut own piping tones.

Ah wa nain
Ah wa nem?
Wa yau was ea-
Ko prasod.
(Who is this?)
(Who is this?)
(Giving light-meaning the light of the eye)
(On the top of my lodge.)

And then she assumes the tone of the linle screech owl, and answerb-
Koh kob kob (It is I-che littie owl)

Nim be exhau
Kob kob kob
Nin be e 2 hau
Kit che-kit che.
It is $I$, it is $I$, bither swinging,
Dodge, dodge, baby dodge;
And she springe towards it and down goes the little bead. Thir is repeated with the utmost merriment upon both sides.

Who is this, who is this eye-light bringing To the roof of my lodge ?
It is I , it is I , hither swinging,
Dodge, dodge, baby dodge.
Here is another, slower and monotonous, but indicaring the utmota maternal content:

Swinging, swinging, lul la by, Sleep, little daughter sleep,
'Tis your motber watching by, Stringing, swinging she will keep,
Linle daughter lul la by.
'Tis your mother loves you dearest,
Sleep, sleep, daughter sleep,
Swinging, awinging, ever nearesh, Baby, baby, do not weep;
Liule daughter, lal la by.
Swinging, awinging, lul la by, Sleep, sleep, litle one,
And thy mother will be nigh-
Swing, swing, not alone-
Litide daughter, lul la by.
This of course is exceedingly simple, but be it remembered themo cbaunts are always so in the most refined life. The ideas are the same, that of tenderness and protective care only, the ideas being few, the language is in necordance. To my mind it has been o matuer of extreme interest to observe how almost identical are the expressions of affection in all states of society, as though these primitive elemeats admit of no progress, but are perfect in themselves. The e-we-yea of the Indian woman is entirely analogous to the lul la by of our language, and will be seen to be exceedingly pretly in ibelf.

2 The original words of this, with their literal import, are aloo added, $t o$ preserve the identity.
(a.)

Wa wa-wa wa-wa we yea, (Swinging, twice, hullatry.)
Nebaun-nebaun-nebaun, (Sleep thou, thrice.)
Nedaunis-ais, e we yea, (Litlle daugbter, lullaby.)
Wa wa-wa wa-wa wa, (Swinging, thrice.)
Nedaunisais, e we yea, (Liule daughter lullaby.)
Kegub, ke gun ab wain e ma, (Your mother cares for you.)
Nebaun-nebaun-nebaun, e we yea, (Sleep, thrice, lullaby.)
Kago, saigizze-kain, nedaunisais, (Do not farr, my litule daughter.)
Nebaun-nebaun-nebaun, (Sleep, thrice.)
Kago, saigizze-kain, wa wa, e we yea, (hird line repeated.)
(c.)

Wa wa-wa wa-wa we yea, (Swinging, twice, lullaby.)
Kaween neezheke kedirusee, (Not alone art thou.)
Ke kan nau wai, ne me go, suhween, (Your mother is caring for you.)
Neban-nebaun-nedaunisais, (Sleep, sleep, my litle daugbter.)
Wa wi-wa wa-wa we yen, (Swinging, sec. lullaby.)
Nebaun-bebaun-nebaun, (Sleep| sleep 1 sleep.")

THE HARE AND THE LYKS.
3. The sory of the Wabose, (Hare) and the Pighieu, (Lynx,) will at once remind the reader of the so often recited tale of little Red Riding Hood, in which the reciter imitates the tones of the wolf, and the little nursery listener bears with a growing amazement, and stars as if he felt the real wolf's teeth at the close.

This story is pardy apoken and partly sung. The Telier imitating alcornately the Hare, and its enemy, the Lynx.

There was onee, she says, a liule Hare living in the lodge with its grandmother, who was about to send it back to its native land. When it had gone but a little way, a Lynx appeared in the path, and began to aing,

[^19]> Where pretty white one?
> Where litte white one, Where do you go?

Tahwee! ishwee! tshwee! tshwee! cried the Hare, and ran bacis to its grandmother. "See, grandmother," said the timid litle creature, "what the Lynx is saying to me," and she repested the song. "Hol Nosis," that is to say, courage my grandehild, run along, and tell him you are going home to your native land: so the Hare went back and began to sing,

To the point of land I roarm,
For there is the white one's home- Whiber I go.
Then the Lyax looked at the trembling Hare, and began to sing,
Little white one, tell me why
Like to leather, thin and dry, Are your pretty ears?
Tshwee! tshwee! tshwee! tshwee! cried the Hare, and she ran back to her grandmother, and repeated the words. "Go Nosis, and tell him your uncles fixed them so, when they came from the South." So the Hare ran back and sang,

Fron the south ray uncles came,
And they fixed my ears the same,--
Fired my slender eara
and then the Hare laid her pink ears upon her shoulders, and was aboot to go on, hut the Lynx began to sing again,-

> Why, why do you go away?
> Pretly white one, can't you stay?
> Tell me why your litle feet
> Are made so dry and very fleet?

Tshweel tshwee! tshwee! tahweal said the poor litle Hare, and she ran back again to the lodge to ask again. "Ho! Nosis!" said the grandmother, who was old and Lired, "do not mind him, nor listen to him, nor answer him, but run on."

The Hare obeyed, and ran as fant as she could. When the came to the apot where the hynx bad been, she looked round, but there was no one there, and she ran on. But the Lyny had found out all about the little Hare, and knew she wes going across to the neck of land; and be had nothing to do but reach it first, and waylay her; which he did: and when the innocent creature came to the place, and had got almose homsa, the Lynx eprang out of the thicket and eat her up.

The original chant, omiting the narralive part as given above, rune in this fashion, word for word.

| Lyyx. | Tah kau | (where ah !) |
| :---: | :---: | :---: |
|  | Tah hau | (where ab !) |
|  | Wa bose | (litule while one) |
|  | Wa bose | (little white one) |
|  | Ke to este | (are you going 3) |
| Hare. | Na kwa oushing | (to the point of land) |
|  | Ain dah nul eaum bann | (in my native counury) |
|  | In de e zha | (Igo.) |
| Lynx. | Au neen | (what I) |
|  | Au neen | (what) |
|  | A nau be kaus o yun aig | (causet it) |
|  | Kioh ke mun ing | (why like stripe of leather) |
|  | Ish o tow ug a una, | (are your eare 3) |
| Hare. | Nish ish sha ug | (my unclea,) |
|  | O sha wun e nong | (when from the south) |
|  | Kee zhe waud | (they eame, ) |
|  | Ningeeaizhegoobun eeg | (Lhey did fix me 50.) |
| Lypx | Tab kau | (where ah!) |
|  | Tah rau | (where ah 1) |
|  | Wa bose | (bute white one, |
|  | Wa bose | (limle white one, |
|  | Ke de e zta | (are you going?) |
|  | Au neen | (why 1) |
|  | Na naubo kos o yun | (look they so, |
|  | Kish ke mun a , | (like dry bits of leather,) |
|  | I ixh e zide uns, | (your feet hal) |

## 4. THis ITEE AHD THE RAOLE

This is a specimen of Indian eatire. The coward is boastful whas there is no danger: pretencion succeeds in the absence of zeal merit $\dagger$ A Kite was boasting how high he could fly, and ventured to apeak dis paragingly of the eagle, not knowing that the latter overheard him. He began to sing in a loud voice,

> I upward fly
> I I alone disdain the air
> Till I hang as by a hair
> Poised in the sly.

The Fagle answers diodainfully, looking down from a branch fr ebove the Kite,

Who mouns the aky ?
Who is this, with babbling tongue
As he bad on the storm-cloud hang,
Who flies so high?
The Kite in a shrinking, feeble voice,
The great Khakake
I've sometimes thought he flew so high
That be must see within the sky
The dawn awake.
The Eagle despises him, and yet cannot forbear to answor,
I spurn you all, ye prating throng
How oflen have I passed ye by
When my broad pinions fleet and strong,
Soared up where leapt the thunder cryl
Nor ye with feeble wing might dare,
Those hilltopa high, to mount in air.
and he soared off, up, up into the sky till the boaster could not behotd him But no sooner was the Kite lefl alone to himself than he began to ring again 80 as to be heard on every eide,

> I upward fly

I, I alone disdain the air Till I hang as hy a hair Poised in the eky.

Literally thus

| Kite | Nepa | (I alone) |
| :---: | :---: | :---: |
|  | Neen a | (I alone) |
|  | Ta wa e ya | (can go np) |
|  | Bai hwau | (so as to seem as ir hanging |
|  | As shau dau | $\left\{\begin{array}{c}\text { (oo as to seem as if hanging } \\ \text { ty i hair }\end{array}\right.$ |
|  | Wa ke ge daud |  |
| Eagle. | O shau wush ko gee | zhig oong a (from the blue sky.) |
|  | Auwa dain | (Who is this?) |
|  | Au wa nein | (Who is this?) |
|  | Tshe mud je wr wh | (with bebbling tongue, who boasts) |
|  | Ke pim o staing. | (of flying so high ?) |

Kite (ahrinkingly) replies, "Oh I was only singing of the great Khntake, it is he who is seid to fly so high."

Eagle disdainfully replies, "Tshe mud jo wa wa, that is great babhler, or bed-tongue, jou are below my notice," \&xc., and soars alall

Kite, resuming its boasting tone, as soon an the eagle is out of hearing,

## 5. THE RAVEM AND WCODPBCEKKR

A still farther view of Indian manners and opinions is hid ander thin eimple chant. Opinion among the forest race, makes the whole animated creation cognizant and intelligent of their customs.

A young married woman is supposed to go out from the lodge, and basy herself in breaking up dry limbs, and preparing wood, as if to lay in a atore for a future and approaching emergency.

A raven, perched on a neighbouring tree, espies her, at ber work, and begina to sing; assuming the expected infant to be a boy.

> In dooh ke zhig o mun
> In dosh le zhig o mun
> In dosh ke zhig o mun

My eyea i my eyes 1 my eyea! Alluding to the boy (and future man) killing animals as well as men, whose eyee will bo left, as the singer anticipates, to be picked out hy ravenous birds. So early are the first notiane of wer implanted.

A woodpecker, sitting near, and hearing this song, replies; asaming the sox of the infant to be a fimale.

Ne mos as ming ga
Ne mos sa mig ga
Ne mos sa mug gi.
My worms! my worms! my worms! Alluding to the custom of the female's breaking up dry and dozy wood, out of which, it could pick in favourite food, being the mosa or wood-worm.

Want of space induces the writer to defer, to a future number, the re mainder of his collection of these cradle and noreery chants. They constitute in his view, rude as they are, and destitute of metrical attractione, a chapter in the hiswory of the buman heart, in the savage phasin, which deserves to be carefully recorded. It has fallen to his lot, to observe more. perhaps, in this departroent of Indian life, than ordinary, and he would not acquit himself of his duty to the race, were he to omit these small links out of their domestic and social chain. The tie which binds the mother to the child, in Indian life, is a very strong one, and it is conceived to admit of illustration in this manar. It is mot alone in the war-path and
the council, that the Red Man is to be studied. To apprecinte his whole character, in its trae light, he must be followed into his lodge, and viewed in his seasons of social leisare and retirement. If there be any thing warm and abiding in the heart or memory of the man, when thus at ease, surrounded by bis family, it must come out here; and hence, indeed, the true value of his lodge lore, of every kind.

It is out of the things mental as well as physiological, that pertain to maternity, that philosophy must, in the end, construct the true ethnologieal chain, that binds the human race, in one comprehensive systern of unity.
(TO be contmued)

## LAMOUAOES OF TETE PACHFIO DLAAND,

The Polynesian languages, like those of the Algonquin group of North America, have inclusive and exclusive pronouns to express the words one ours, and us. They have also causative verbs auch as, to make afraid, to make happy, \&ec., but while there appears this analogy in grammatical principles, there are some strong points of disagreement, and there appears to be no analogy whatever in the sounds of the language. There are eight well characterized dialecte in the Polynesian family. They are the Tabition, the Owyhee, [Hawaiian] Marquesan, or Washingtonian, Austual inland, Hervey island, Samoan, Tongatabu, and New Zealand. In seven of theese, the name for God is Atua, in the eighth, or Tongua dialect, it is Otua. Great resemblances exist in all the rocabulariea Much of the actas difference arisen from exchanges of the consonants r and L , $h$ and e , and a few others They possess the dual number. The scheme of the pronouns is very complete, and provides for nearly all the recondite distinctions of person. Where the vocabulary fails in words to designete objects which were unknown to them before their acquaintance with Europeans, the missionaries have found it to fall in better with the genius of the language, to introduce new words from the Greek, with some modifications. Thus they have introduced hipo for horse, arenio for lamb, areto for bread, and baptizo for baptimm.

To continue faithful during a course of prosperity, saya Xenophon, hath noching wonderful in it but when any set of men continue steadily attached to friende in adversity, they onght on that account, to be eternally remembered.

There are but two sourcea only, saya Polybjua, from wbence any real benefit can be derived, our own misfortunes and those that have happened to other mex.

One wise counsel, segt Euripidea, is bectar than the areagth of meny.

Netare and principles of the pronoun-Ita dirtinction into preformetre and abbern mative clasese-Pereonel pronouno-The dietinction of an incleaive and exelusive form in the number of the firet penon plural-Modifications of the pereond pronound to imphy eximtence, individuality, posemion, ownenahip, position and other aceident-Declordion of presidas to answer the purpae of the auriliary verbe-Sabfornatives, bot amployed, to mark the permon-Rolative promoun contidered-Their application to tho
 and innnimater-Exampie of their rean

Pronouns are buried, if we may so say, in the btructure of the verb In tracing them back to their primitive forms, through the almoet infinite nariety of modifications which they assume, in connexion with the verb, substantive and adjective, it will facilitate analysis, to group them into preformative and subformative, which include the pronnminal prefixes and suffixes, and which admit of the further distinction of separable and inseparabla. By separable is intended those forms, which have a meaning by themselves, and are thus distinguished from the inflective and subformative pronouns, and pronominal particles sigaificant only, in connection witb another word.

1. Or the first class, are the personal pronouns Neen (I,) Keen (thou,) and Ween or $O$ (he or she.) They are declined to form the plural persons in the following manner:

| L, | Neen. | We | Keen owind (in.) |
| :--- | :--- | :--- | :--- |
| Thou, | Keen. | We | Neen owind (er) |
| He orShe, Ween or O. | Ye | Keen owau. |  |
| They | Ween owau. |  |  |

Here the plural persons are formed by a numerical inflection of the singular. The double plural of the firet person, of whicb both the cule and examplee have been incidentally given in the remarks on the substantive, is one of those peculiarities of the language, which may, perhaps, serve to aid in a comparison of it, with other dialects, kindred and foreignAs a mere conventional agreement, for denoting whether the person addressed, be included, or excluded, it may be regarded as an advantage to the language. It enables the speaker, by the change of a single consonant, to make a full and clear discrimination, and relieves the narration
from doubts and ambiguity, where doubts and ambiguity would otherwise ofton exist. On the other hand, by accumulating diatinctiona, it loads the memory with grammatical forms, and opens a door for improprieties of apeech. We are not a wate of any inconveniencies in the use of a general plural But in the Indian it would produce confusion. And it is perhaps to that cautious desire of personal discrimination, which is so apparent in the structure of the language, that we should look for the rear son of the duplicate forme of this word. Once exablished, however, and both the distinction, and the necessity of a constant and sarict attention to it, are very obvious and striking. How shall he address the Deity? If he say-"Our father woho art in heaven," the inclusive form of "our" makes the Almighty one of the suppliants, or family. If he use the exclusive form, it throws bim out of the family, and may embrace every living being but the Deity. Yet, neither of these forms can be ued well in prayer, as they cannot be applied directly to the object addreaed. It is only when speaking of the Deity, under the name of father, to other persons, that the inclusive and exclusive forms of the word "our" can be used. The dilemma may be obviated, by the use of a compound descriptive phraso-Wa o se mig o yun, signifying-thou who att ters pather of all. Or, universal father.

In practice, however, the question is eut shor, by those persons who bave embraced Christianity. It has seemed to them, that by the use of either of the foregoing terms, the Deity would be thrown into too remole a relation to them, and I have observed, that, in prayer, they invariably address Him, hy the term used by children for the father of a family, that in, Nosa, my father.

The other personal pronouns undergo some peculiar changes, when employed as preformatives before nouns and verbs, which it is important to remark. Thus neon, is sometimes rendered ne or nim, and sometimes nim . Keen, is rendered ke or kin . In compound words the mere signs of the first and second pronouns, $\mathbf{N}$ end K , are employed. The use of woen is limited; and the third person, singular and plural, is geaerally indicated by the sign, 0 .

The particle suh added to the complete forms of the digjunctive pronouns, imparts a verbal sense to them ; and appears in this inslance, to be a succedaneum for the substantive verb. Thus Neen, I, becomea Neensuh, it is I. Keen, thou, becomea Keensuh, it is thou, and Ween, be or she, Weensuh, it is he or she. This particle may also be added to the ploral forms.

| Keenowind suh | It is we (in.) |
| :--- | :--- |
| Necnowind suh. | It is we (ex.) |
| Keenowa suh | It is ye, or you. |
| Weannweu sub. | It is they. |

If the word sittah be subsituted for suh, a set of adverbial phraseen are formed.

Neen aituh, I only.
Neen airtah wind, We de. (ex)
Keen aittah wind, We \&cc. (in.)
Keen aittah wau, You \&c.
Keen aitrah, Thou only.
Ween aittah wau, They de.
Ween aittah, He or she only.
In like manner nittum first, and ishkwaudg last, give ṛise to the following arrangement of the pronoun:

| Neen nittum, | I first |
| :--- | :--- |
| Keen nittum, | You or thou first |
| Ween nituum, | He or she first |
| Keen nittum ewiod, | We first (in.) |
| Neen nittum ewind, | We first (er.) |
| Keen nittum ewau, | Ye or you first |
| Ween nittum ewau, | They first |

ISHKWAUDJ.

Neen ishkwaudj,
Keen ishkweadj,
Ween ishlwandj, Keenowind ishkwaudj, Neenowind ishkwaudj, Keenowau ishkwaudj, Weenowau ishkwaudj,

I last,
Thou leat
He or she last
We last (in.)
We last (ex.)
Ye or you lat.
They last

The digiunctive forms of the pronoun are also sometimes preserved before varbe and adjectives.

NEEZHIKA. Alone (an)

Neen neezhika, Keen neezhika, Ween neezbika, Keenowind neezhike, Neenowind neezhika, Keenowau neezbika, Weenowau neezhika,

I alone
Thou alone.
He or she alone.
We alone (in.)
We alone (ex.)
Ye or you alone.
They alone.

To give these expressions a verbal form, the substantive verb, with its pronominal modifications, must be superadded. For instance, I am alone, tec., is thus rendered:

Neen neezhika nindyau,
Keen neezhika keedyau,
Ween neezhika Iyau,

I am alone, $\times$ aumin
Thou art alone, $X$ aum.
He or she is alone, \&c. $\times$ wug.

La the sobioined axamples the noun ow, body, is changed to a verb, by
the permatation of the rowel, ehanging ow to anw, which late the the letter $\mathbf{d}$ before it, when the pronoun is prefixed.

| I am a man, | Neen nin dauw. |
| :--- | :--- |
| Thou art a man, | Keen ke dauw. |
| He is a man, | Ween ah weeh. |
| We are men, (in.) | Ke dauw we min. |
| We are men, (ex.) | Ne dauw we min |
| Ye are men, | Ke dauw min. |
| They are men, | Weenowau ah weeh wug. |

In the translation of these expressions "man" is used an bynonomous with person. If the specific terminine, had been introduced in the origiasal, the meaning thereby conveyed would be, in this particular connexion. I am a man with respect to courage \&ce, in opposition to effemibacy. Is would not be simply declamtive of corporeal existence, but of existence in a particular state or condition.

In the following phraees, the modified forms, or the aiges only, of the pronouns are used:

| N debaindaun, | I own it. |
| :--- | :--- |
| Ke debaindaun, | Thou ownest it |
| O debaindrun, | He or she owns it |
| N' debaindaun-in, | We own it (er.) |
| Ke debaindaun-in, | We own it (ia.) |
| Ke debaindaun-ewau, | Ye own it. |
| O debaindoun-ewau, | They own it. |

These examples are cited as exhibiting the manner in which the prefixed and preformative pronouns are employed, both in their full and contracted forms. To denote posseasion, nount specifying the thingt possessed, are required; and, what would not be anticipated; had not full examples of this species of declension been given in another place, the purposes of distinction are not effected by a simple change of the pronoun, as $I$ to mine, acc., but by a subformative inflection of the nown, which in thus made to have a reflective operation upon the pronoun-opeaker. It is believed that sufficient examples of this rule, in all the modifications of inflection, havo been given under the head of the substancive But an the subetantives employed to elicit these modificalions were exclusively specific in their meaning, it may be proper here, in further illustration of an important principle, to present a generic substantive under their compound forms.

I have selected for this purpose one of the primitives. Ie-A $\theta$, is the abstract tarm for existing matter. It is in the animate form and declarative. Its inanimate correspondent is re-EE. These are two important roots. And theyare
found in combination, in a very great number of derivative words It will be sufficient here, to show their connexion with the pronoun, in the production of a class of terms in very general use.

Animate Forms.

Ioanimate Forme

Singular.
Poes. $\begin{cases}\text { Nin dyè eem, } & \text { Mine. } \\ \text { Ke dyêe eem, } & \text { Tbine. }\end{cases}$

## Plural.

Nin dye eeminaun, Ours. (ex.) Ke dye eeminaun, Ours. (in.)
Ke dye eemewan, Yours.

Obj. O dye eom-un, His or Hers. O dyê eemewaun, Theirs. Poss. in,
In these forms the noun is singular tbroughout. To render it plural, as well as the pronoun, the appropriate general plurals ug and un or ig and $i n$, must be superadded. But it must be borne in mind, in making these additions, "that the plural inflection to inanimate nouns (which have no objective case,) forms the objective case to animates, which have no number in the third person," [p. 30.] The particle $u n$, therefore, which is the appropriate plural for the inanimate nouns in these examples, is only the objective mark of the animate.

The plural of I , is noum, the plural of thou and he, wau. But as theso inflections would not coslesce smoothly with the ponsessive inflections, the connective vowels $i$ and e are prefixed, making the plutal of $\mathbf{I}$, inoun, and of thou, acc. roatu.
If we strike from these declensions the root m , leaving its animate and inanimate formsav, and ek, and adding the plural of the noun, we shall then,--taking the animate declension as an instance, have the following formula of the pronominal declensions.

| $\begin{aligned} & \text { Pron. } \\ & \hline \text { Sing. } \\ & \hline \end{aligned}$ | Place of the Noun. | Poocravive | $\begin{aligned} & \text { Obj. infec. } \\ & \text { Lo the } \\ & \text { noun sing. } \end{aligned}$ | Connect rowel. | $\begin{gathered} \text { Plu. inflec. } \\ \text { of the } \\ \text { pronoun. } \end{gathered}$ | $\left\|\begin{array}{c} \mathbf{O b j} . \\ \text { infec. } \\ \text { n. plua. } \end{array}\right\|$ | $\begin{aligned} & \text { Ptural } \\ & \text { of the } \\ & \text { Noun } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Ne |  | aum |  | - i- | - naun | - | - ig. |
| Ke | - - | aum | - | - $\mathrm{e}-$ | - wan | - | - g. |
| 0 |  | au | un |  |  |  |  |
| o |  | aum |  | - e- | - wau | -n |  |

To render this formula of general use, six variations, (five in addition
to the abore) of the possessive inflection, are required, corresponding to the sir clases of substantives, whereby aum would be changed to am, eem, im, om, and oom, cooformably to the examples beretofore given in treating of the substantive. The objective inflection, would also be sometimes changed to een and sometimes to oan.

Having thus indicated the mode of distinguishing the person, number, relation, and gender-ar what is deemed its technical equivalent, the mutation words undergo, not to marly the distinctions of sex, but the presence or absence of vitality, I shall now advert to the inflections which the pronouns take for tense, or rather, to form the auxiliary verbs, have, had, shall, will, may, \&c. A very curious and important priaciple, and one, which clearly demonstrates that no part of speech has escaped the trana. forming genius of the language. Not only are the three great modifications of time accurately marked in the verbal forms of the Chippewas, but by the inflection of the pronoun they are enabled to indicate some of the oblique tenses, and thereby to conjugate their verbs with accuracy and precision.
The particle gee added to the first, second, and third persons singular of the present tense, changes them to the perfect past, rendering $I$, thou, He , I did-have-or had. Thou didst,-hast-or hadst, He , or she didhave, or had. If gah, be substituted for gex, the first future tense is formed, and the perfect past added to the first future, forms the conditiona! future. As the eye may prove on auxiliary in the comprebension of forms, which are not familiar, the following tabular arrangeanent of them, is presented.

Nin gee,
Nin gah,
Nin gah gee,
Ke gee,
Ke gah,
Ke gah gee,

First Person, I.
I did-have-had.
I shall-will.
I shall have-will have.
Second Person, Thou.
Thou didst-hast-hadst
Thou shalt-wilt.
Thous shalt have--wilt have.
Third Persom, He, or She.
O gee,
$O_{\mathrm{gah}}$
0 gah gee,
He or she did -has-had.
He or she did-has-had.
He or she shall have-will have.
The present and imperfect tense of the potential rood, is formed by daw, and the perfect by gec, suffixed as in other instances.

First Person, I.
Nin dau,
Nin dau gee,
I may-cen, \&c.
I mag have-can have, \&c.

## Second Petrom, Thow

| Ke dau, Ke dau gee | Thou mayst-canst, ac. <br> Thou mayst have-canst have, \&cc. |
| :---: | :---: |
|  | som, He , or She. |
| O dau, | He or she may-can, de. |
| O dau gee, | He or she may have-can have, |

In conjugating the verbs through the plural persons, the singular terms for the pronoun remain, and they are rendered plural by a retrospective action of the pronominal inflections of the verh. In this manner the pronoun-verb auxiliary, has a general application, and the necessity of double forms is avoided.

The preceding observations are confined to the formative or prefixed pronouns. The inseparable suffixed or subformative are as followe-

| Yaun, | My. |
| :--- | :--- |
| Yun, | Thy. |
| Id, or d, | His, or hera |
| Yaung, | Our. (ex.) |
| Yung, | Our. (in.) |
| Yaig, | Your. |
| Waud, | Their. |

Theae pronouns are exclusively employed as suffixes,-and as suffires to the descriptive compound substantives, adjectives and verbs. Both the rule and examples have been stated under the head of the subsantive, p. 43. and adjective, p. 81. Their application to the verb will be shown, as we proceed.
2. Relative Pronouns. In a language which provides for the distinctions of person by particles prefired or suffived to the verh, it will scarcely be expected, that separate and independent relative pronouns should exist, or if such are to be found, their use, as teparate parts of speech, must, it will have been anticipated, be quite limited-limited to simple interrogatory forms of expression, and not applicable to the indicative, or declaratory. Such will be found to be the fact in the langunge under review ; and it will be perceived, from the subjoined examples, that in all instances, requiring the relative pronoun who, other than the simple interrogalory forms, this relation is indicated by the inflections of the verb, or adjective, \&e. Nor does there appear to be any declension of the separate pronoun, corresponding to whose, and whom.

The word Ahwaynain, may be said to be uniformly employed in the sense of who, under the limitations we have meationed. For instance.

Who is there?
Who apole?
Who told you?

Abwaybain e-mah ai-aud?
Ahwaypain Lau leegrodood?
Ahwaynain kou ween dumoak?

| Who are you? | Ahwaynain iau we yun? |
| :--- | :--- |
| Who sent you? | Ahwaynain waynonik? |
| Who is your father? | Ahwaynain kos? |
| Who did it? | Ahwaynain kau todung? |
| Whose dog is it? | Ahwrynain way dyid? |
| Whose pipe is that? | Ahwaynain dopwaugunid eneu? |
| Whose lodge is it? | Ahwaynain way weegewomid? |
| Whom do you seek? | Ahwaynain nain dau wau bumud? |
| Whom have you here? | Ahwaynain oh omau ai auwaud? |

Not the slighlest variation is made in these phrases, belween who, whose, and whom.

Should we wish to change the interrogative, and to say, he who is there ; he who spoke ; he who told you, \&cc., the separable personal pronoun ween (he) must be used in lieu of the relative, and the following forms will be elicited.

| Ween, kau unnonik, | He (who) sent you. |
| :--- | :--- |
| Ween, kau geedood, | He (who) spoke. |
| Ween, ai-aud e-mah, | He (who) is there. |
| Ween, kau weendumoak, | He (who) told you. |
| Ween, kau to dung, | He (who) did it, dce. |

If we object that, that in these forms, there is no longer the relative promoun who, the sense being simply, he sent you, he spoke, \&ce., it is replied that if it be intended only to say, he sent you, \&c., and not he who sent you, \&c., the following forms are used.

Ke gee unnonig.
Ainnozhid,
Ainnonaud,
lau emau,
Ke geedo,
Kegeeweendumaug,
Ke to dum,

He (sent) you.
He (sent) me.
He (sent) him, \&c.
He is there.
He (spole.)
He (told) you.
He did it.

We reply, to this answer of the native speaker, that the particle kau prefined to a verb denotes the past tense,--that in the former series of terms, in which this particle appesrs, the verbs are in the perfect indicative,and in the lauer, they are in the present indicative, marking the dif farence only between sent and send, spoke and speak, \&c. And that there is absolutely no relative pronoun, in either series of terms. We further observe, that the personal pronoun ween, prefixed to the first set of terms, may be prefixed with equal propriety, to the second set, and that its use or disuse, is perfectly optional with the speaker, as he may wish to give additional energy or emphasis to the expression. To these positions, after reflection, discussion and examination, we receive an assent, and thus the uncertainty is terminated.

We now wish to apply the principle thus elicried to verbs causative, and other compound terms-lo the adjective verbs, for instance-and to the aber verbal compound expressions, in which the objective and the nominative persons, are incorporated as a part of the verb, and are not prefixes to it. This may be shown in the causative verb, To make Happy.

Mainwaindumeid,
Mainwaindumeik,
Mainwaindumeaud,
Mainwaindumënung,
Mainwainduméyaug,
Mainwaiduméinnaig,
Mninwaindumeigowaud,

He (who) makes me happy.
He (who) makes thee happy.
He (who) makes him happy.
He (who) ratses $u s$ happy. (inclusive.)
He (who) makes us happy. (exclusive.)
He (who) makes ye or you happy.
He (who) makes them happy.

And so the forms might be continued, throughout all the objective persons.-

Mainwaindumeyun, Thou (who) makest me happy, \&c.
The basis of these compounds is minno, good, and aindum, the mind. Hence minwaindum, he happy. The adjective in this connexion, cennot be translated "good," but its effect upon the noun, is to denote that state of the mind, which is at rest with jiself. The frot change from this simple compound, is to give the adjective a verbal form; and this is effected by a permutation of the vowels of the firat syllable-a rule of very extensive application-and by which, in the present instance, the phrase he happy, is changed to he makes happy, (mainwaindum.) The next step is to add the suffix personal pronouos, id, ik, aud, \&c., rendering the expressions, he makes me happy, \&c. But in adding these increments, the vowel e, is throwa between the adjective-verb, and the pronoun suffixed, making the exprexsion, not majnwaindum-yun, but mainwaindumeyun. Generally the vowel e in this situation, is a connective, or introduced merely for the eake of euphony. And those who maintain that it is here employed as a personal pronoun, and that the relative who, is implied by the final inflection; overlook the inevitable ioference, that if the marked e, stands for me in the first phrase, it must stand for thee in the second, he in the third, $u s$ in the fourth, sec. As to the meaning and office of the final inflections id, ik, \&c.-whatever they may, in an involuted sense imply, it is quite clear, by turning to the list of suffized personal pronowns and animase plurats, that they mark the persone, I , thou, he, \&c.., we, ye, they, \&ce.

Take for example, minwaindumeigowaud. He (who) maken them happy. Of this compound, minwaindum, as before shown, signifies he aakes happy. But as the verb is in the singular number, it implies that but one person is made happy, and the suffixed personal pronouns singular, mark the distinctions between me, thee, and he, or him

Minwaindumeig is the vers plural, and implies that several per-
mons are made happy, and, in like manner, the sulfixed personal pronouna plural, mark the distinctions between we, ye, they, \&sc. For it in a rule of the language, that a strict concordance must exist between the number of the verb, and the number of the pronoun. The termination of the verb consequently always indicates, whether there be one or many objects, to which its energy is directed. And as animate verbs can he applied only to animate objects, the numerical inflections of the verh, are understood to mark the number of persons. But this number is indiscriminate, and leaves the sense vague, until the pronominal suffixes are superadded. Those who, therefore, contend for the sense of the relative pronoun "who," heing given in the last mentioned phrase, and ali phrases similariy formed, hy a succedaneum, contend for something like the following form of translation:-He makes them happy-him! or Him-he (meaning who) makes them happy.
The equivalent for what, is Waygonain.
What do you want? Waygonain wau iauyun?
What have you lost? Waygonain kau wonetoyun?
What do you look for?
What is this?
What will you have?
What detnined you?
What are you making?
What have you there?

Waygonain nain dahwaubundamun?
Waygonain ewinain maundun?
Waygonain kau iauyun?
Waygonain kau oon dahme egoyun?
Waygonain wayzhetoyun?
Waygonain e-mau iauyun?

The use of this pronoun, like the preceding, appears to be confined to simple interrogative forms. The word auncen, which sometimes supplies its place, or is used for want of the pronuun which, is an adverb, and has considerable latitude of meaning. Most commonly it may be considered as the equivalent for hov, in what manner, or at what time.

What do you say?
What do you call this?
What ails you?
What is your name?
Which do you mean; this or that? (an.) Auneen ah-owainud, woh-ow gamau
Which do you mean; this or that ? (in.) Auneen eh eu ewaidumun oh- $\infty$
Which boy do you mean?
ewidde? gatmau ewaidde?
Auneen akeedoyun?
Aureen aizheneekaudahmun maundun? (i.)
Auneen aindeeyun?
Auneen aizheekeuzoyun?

Auneen ah-ow-ainud?

By adding to this word, the particle de, it is converted into an adverh of place, and may be rendered where.

Where do you dwell?
Where is your son?
Where did you see him?

Auneende aindanyun?
Auneende ke gwise ?
Auneende ke waubumud?

Where did you see it?
Where are you going?
Where did you come from?
Where is your pipe?
Where is your gan?

Auneende ke waubundumun $?$
Auneende azhauyun ?
Auneende ka conjeebauyun ?
Auneende ke dopwaugun?
Auneende ke baushkizzigun?

By a still further modification it is rendered an adverb of enquiry of the cause or motive.

Why do you do so?
Why do you say so?
Why are you angry?
Why will you depar?
Why will you not depert?
Why have you come?
Tell me why?
Wherefore is it so 3
Auneeshween eh eu todumun?
Auneeshween eh eu ekeedoyun?
Auneeshween nighkaudizzeyun?
Auneeshween wee mabjhuyun?
Auneeshween mahjauseewun?
Auneeshween ke peotzhayun?
Weendumowishin auneesbween?
Auneeshween eht-eu izzhewaibuk (in.)
Wherefore did you strike him? Auneeshween le pukketaywud?
3. Demonstrative pronouns are either adimate or inaoimate; and may be arranged as follows:-

| Animate. |  | Inanimate. |
| :---: | :---: | :---: |
| Mau-bum, (impersonal,) |  | \{ Maun-dun, (inanimate proper.) |
| Woh-ow, (personal, ${ }^{\text {a }}$ ) | T | \{ Oh-m, (inanimate conventional.) |
| h-ow | That, | Eheou. |
| Mau-mig, | These, | Mau-min |
| Igen, (personal, |  | , |
| O-goo, (impersonal, |  | O-noo, (inanimate conventional) |

These words are not always used merely to ascerain the object; but often, perhaps alioays, when the object is present to the sight, have a substantive meaning, and are used without the noun. It creates no uncertainty, if a man be standing at some distance to say, Ah-ow, or if a cauoe be lying at some distance to say Ebeu-he meaning is clearly, that person, or that canoe, whether the noun be added or not. Or if there be two animate objects standing together, or two inanimate objects lying together, the words maumig (a) or maumin (i) if they be near, or Igeu (a) or In-tu (i) if they be distant, are equally expressive of the materiality of the objects, as well as their relative pasition. Under other circumstances, the noun would be required, as where two animate objects of diverse character, a man and a horse for instance, were standing near each other; or a canne and a package of goods were lying near ench other. And in fact, under all circumstances, the noun may be used after the demonstrative pronoun, without violating any rule of grommar, although not without the imputation in meny instances of being oer formal and unnecessarily ginste. What is deemed redundant, however, in oral use, and amongst a people who supply much by aight and gesticulation,
becomes quite necessary in writing the language. And in the following sentences, the substantive is properly emplayed after the pronoun.

This dog is very lean, These dogs are very lean,

Those dogs are fat,
That $\operatorname{dog}$ is fat,
This is a handsome knife,
These are handsorne knives
Those are bad knives,
Give me that spear,
Give me those spears,
That is a fine boy,
Those are fine boys,
This boy is larger than that,

Gitshee bukaukdoozo woh-ow annemocsh.
Gitshes bukauddoozowug o-goo annemooshug.
Igeu annemooshug ween-in-oawug.
Ah-ow annemoosh ween-in-so.
Gagait onishishin maundun mokomahn.
Gagait wahwinaudj 0-noo mokomahnun.
Monaududon in-eqwaidde rookomahnun.
Meezhishin eheu abnith
Meezhishin incu unnewaidde ahnitteen.
Gragait kwonaudj ah-ow kweewezains.
Gagait wahwinaudj ig-euwaidde kweewezainsug.
Nahwudj mindiddo woh-ow kweewezains ewaidde dush.
That is what I wanted, Meeheu wau iauyaumbaun.
This is the very thing I wented, Mee-suh oh-oo wau iauyaumbaun.
In some of these expressions, the pronoun combines with an adjective, as in the compound words, ineuwaidde, and igeuwaidde, thase yonder, (in.) and thase yorder (an.) Compounds which exhibit the full pronoun in coalescence with the word Evoaidde yonder.

## CHRONOLOGY.

Columbus discovered the West Indies Oct. 12, 1492.
Americo Vespucio, discovered the coast of South America, 1497.
Cabot discovered the North American coast 1497.
De Leon discovered Florida 1512.
Cortes, enters the city of Mexico, after a seige, Aug. 13, 1521.
Verrizani, is said to have entered the bay of New York, 1524.
Carier discovered the St. Lawrence, 1534.
Jamestown, in Virginia, is founded, 1608.
Acknowledged date of the settlement of Canada, 1608.
Hudson discovers the river bearing his name, 1609.
The Duteh build a fort near Albany, 1614.

La Salle discovers the Illinois in upper Louissina 1678. discovers Lower Louisiana, and is killed 1685.

## AU'OBIOGRAPHICAL LETTERS

## OF THE <br> Late JoHN J0HNST0N, ESQ.,

WITE EKETCRES OF HIS LIFE, IN CONTINUATION OF THESE LETTERS, AND EOMT BELARCTIONS FROM HIS CORRESPONDENCE AND OCCAGIONAL WRITINGA.

## INTRODUCTORY REMARKS.

Few men have connected their names more widely or reputably with the Red Race of America, than the late John Johnston, Esq, to whose life the present pages are devoted. A native of Ireland, he carne to this country the year after the adoption of the constitution, a young man, having been hrought up in ease and affluence, mixed freely in the polisted circles of his times, and knowing nothing of society, or the world, but what he had seen in these circles, or read of in books. In a spirit of honourable edventure, he went up into the region of the great lakes, engaged in the alluring and then half chivalrous pursuit of the fur trade; but intending in a few years to go back to his estate, then in the passession of his mother, in Antrim With the elasticity of spints of his countrymen, and the love of novelty, independence and romance, of which the region in question then furnished stimulants, he pursued this business till he had assimilated his habits to it He saw in it the means of honourable inde. pendency, without submiting to the actual drudgery of the exchanges and traffic at the interior villages. His first position was at Chagoimegon, near the south-western head of lake Superior, where he married a daughter of a celebrated warrior, who was the reigning Chief. He then fired his residence at the Falls, or as it is commonly called by Americans, the Sault of St. Mary's. In this position be exercised that peculiar species of faclorship, (although ho was himself the outritier and not concerned with a company,) which is necessary to conduct a department of the Indian trade. From his connerion with the leading chief, his frank and honourable dealing, the reception he alwaya gave the red men, and his general intelligence, he exercised a wide infuence over the native tribes. His original letters on coming out, and his known conaexions at home, had given him a reputable standing in the high government and bueiness eir-
eles of Montreal and Quebec. His residence at St. Mary's wes known as the seat of hospitality. He had early taught the forest maid whom he had selected and placed at the head of his house, the duty of refined hospi-tality-a duty it may be said, easily engrafted on the native atock; and as his children grew up, they soon became adepks in all the arta and atentions of receiving and entertaining company. The greatest pains were taken with tbeir education and manners. He possessed a choice library of atandard English works. He was a man of tare, and great fondness for reading. He amused the deep solitude of his position, during the winters, in this way, and sometimes indulged in composition. In this manner his house became, in fact, a seat of refinement in the heart of the wilderness. And in this position, with frequent journeys, local and foreign, be passed the remaining eight and thirty years of his life.

Thie period covers a very intereating era in our national history. It embraces the coming on, progress and termination of the war of 1812, in some of the events of which he became involved; the survey and settlement of the boundary lines on that wild frontier, extending to north latitude $49^{\circ}$, and the incipient movements in our Indians affairs, which have eventuated in large cessions of territory by the tribes, and the acceptance by most of them of the plan of a removal, and colonization west of the Mississippi. Mr. Johnson himself, ever felt the deepest interest in the fate and fortunes of the race, in plans for the introduction of education and christianity amongest them, and in their general araltation in mind and morale, mind restoration to all possible political righta.

It is owing to these considerations that I have introduced the present paper, which will, in the sequel, be perceived to connect itself intimately with the condition, character and bistory of the Odjibwas and of a numerous family of kindred tribes. My acquaintance with Mr. Johnston commenced in 1822, and was continued from that time to the period of his death. Convinced that his reminiacences of life, would present subjects of future and deep interest, I frequenty solicited his undertaking it, but owing chiefly, if not entirely, to the plea of ill health, and chronic paina, be deferred it till bis last year, and unfortunately, as it is thought, for this species of literature, he did not live to complete it He chose the form of leters, which, while they left him to a free and familiar manner, had the effect, he said, to separate bis labour into distinct portions, the completion of one of which, encouraged him to begin anoher. They are addreseed to me.

## LETTERI.

## St. Mary's Falls, 14 Jan. 1828.

## MY DRAR SLR,

I at length have made up my mind to comply with your request and that of my beloved Jane, by throwing together a few recollections reapecting my family, and of my own life: subjecto that could not possibly have any interest with the world, and are only suited to the eye of friendship and of love.

As to my father's family I know nothing but what I have heard in conversaion between my mother and my annt Nancy Johnston, from whom I learned that my great grandfather John, left Scotland after the massacre of Glencoe under William the third. He, and I believe his sister, married into the houses of Leathes of Bury St. Edmunds in Suffolk, and Mussinden of Herringfleet Hall, in Norfolk. My grandfather William possessed an estate in the county of Antrim, held by lease under the Earl of Donnegal, and an estate in the county Down, called Newtonbreda, bordering on the esate of Lord Dangannon, to whom he sold it as being contiguous to his demesne of Belvoir Castle. My eldest uncles, Leathes, John and Michael, were educated at tho famous achool of Armagh, along with Mr. Macartney and Mr. Carleton. The first became an Earl, and the second Viscount Dorchester. My grandfather left his house of Newforge and came to reside in Belfast, for the education of his younger children. Having a considerable sum of money on hand from the sale of his Newtonbreda estate, be planned and executed the Water Works of Belfast, on the security of a lease of 41 yeara. The then Lord Donnegal being insane, his Tutors could only grant leases, but the next heir pledged himself and family at a public dinner given by the town to my grandfather, that the worka should be granted in perpetuity as soon as the circumstances of the family would admit of it. But this word of bonour, so publicly plighted, was afterwards shamefully broken; and the reason adduced for it was that from the increased growth and opulence of the town, the Water Works gave an influence nearly equal to that of the Lord of the soil 1 though it was allowed hy all that the increase, prosperity, and heathb of the place was chiefly owing to the abundant supply of an article so essential to bealth and manufacture. My grandfather's younger children were six, two sons and four daughters. One of his daughtera married the Rev. Wm. Saurin Rector of the town, a aecond married an opulent merchant, whose name was Johnson, a third married the Rev. Robert Heyland, Rector of Colerain, and the fourth, my dear aunt Nancy, gave up the pleasures of a fashionable life to live with my mother, when a widow, and asaist her with ber income
and in our education. My uncles Leathes and Jobn weat early over to their uncle Leathes, who, independent uf his estates, had a good deal of interest from always representing the Borough of St. Edmunds Bury in Parliament They both went into the army ; Leathes had soon a company in the guards, and John in a marching regimedt; but their early introduction into fashionabie life bad a fatal effect on the fortune of both, for they soon plunged ioto all the dissipation and extravagance of the period; and got so much embarrassed that they joined their uncle in cuuting off the entail of the essates, and for $£ 25,000$ and an annuity, to one of $£ 500$, and the other of $£ 200$ per annum, sold their right of ingeritance to their uncle, who bequeathed the whole to his natural children, who are now in full possession of both eatates. My uncle Michael had a chaplaincy in the army, and died of consumption. Leathes married the daughter of the Late Sir Benjamin Bloomfield, and had a family of four sons and a daughter; he then went out to India, where he died a Lieut Colonel. John, after losing three or four commissions, died at last a Lieut Colonel of marines, instead of being an old Lieut General. I have aever seen any of my uncle Leachea's children, I only know that his eldest son William is now a Lieut. General of Engineers, residing at College Green Bristol, afier having spent many years in the Wer Indies. The two youngest sons of my grandfather, William and Mussinden, chose the Nary and Army for their professions. They made a bur into Scotland, where my Uncle Mussinden raised a company in the neighbourhood of Glenco in a few weeks. Thay then visited Edinburgh, and were severally presented with the freedon of the city. I remember the beautiful illuminated vellum, with large green wax seals appended, which my sisters cut up to make parterna for working bobbin lace when we were children. William was a midshipman at the laking of Louishurgh I think in 1759. As soon as peace was proclaimed he quit the navy, and was appointed Surveyor of Por Rush, in the North of Ireland. The family were al! grown up and dispersed when mif grandfather was made Collector of Colerain. He had lost his first wife for some years, and being tired of living alone made a visit to Liverpool, where he married a widow lady of high connections, hut before embarking for Ireland he had to pay $£ 800$ sterling, for debus she had formoerly contracted. I believe he only lived two or chree years after his eecond marriage. Abeut this time my father married Elizabelh, the aldem daughter of John Mc Neil, Esq. of Couiresheskan, in English, Wheatland. He got as a marriage portion the reversion of the quarter latif of Craige, less than three miles from the Giant's causeway, a beauiful aito tion and fine land, which did not come into my mother's possession till the expiration of 20 yeara after bigning the marriage articlea. I was bom the 25th of August 1762, and was sent to school in Colerain in my meventh year. When I lefl home my father wes on his deach bed, he had boen much afflicted wilh dyspepoia, for which his friend and phyaician, a

Doctor Stephenson of Colerain, had administered mercury without informing him of it. He had been on a visit to a friend beyond the river Bush, and on returning in the evening found the tide in, and rather than go two miles farther up to a bridge, he swam his horse over, and caught a cold which immediately fell upon his lungs, and in leas than three monchs carried him to an untimely grave, in his 43d year, to the irreparable loss of his family, and regret of all who knew him. My mother was left a widow with two sons and three daughters. Jane was the oldest, hy a year, I was the next, Eliza, yet living, the third, William the fourth, and Charlotte, the youngest and most beautiful, but the earliest in her grave, being carried off by the small por in her seventh year. I could loag dwell on her sweetness of temper, her early piety, her beauty and her grace, and above all her distinguished love for me, but the subject has ever been too painful for me. And now my dear sir, having given you nearly all the knowledge I possest respecting my family, I shall conclude this hasty sketch by promising that when another scribbling fit comes on I shall again renow the subject, though I feel it will become more irksome to me as my picture gradually fills the foreground.

Ever affectionately yours, JOHN JOHNSTON.

## LETTERII.

St. Mary's Falls, 19th Jan 1828.
MT DRAR 8D,
In compliance with my promise, I resume the subject of my Simple Annals." My mother's income was much circumscribed by the death of my father, so much so, that she was obliged to withdraw me from sehool in my tenth year. lnstead of having a bandsome income from three fourths of the Water Works, which devolved on her and my aunt Nancy, such had been the mismanagement, not to give it a harsher name, of the Rev. Robert Heyland, who had a fourth of the income by his wife, that several sams were demanded of my mother and aunt, said to be expended in repairs over and above the rental, which was more than E400 sterling a year. On my return from school I was examined by my annt, who found that I neither knew Latin or English grammatically, and conld scarcely write my name; so much for an Irish Latin sehool; and that too kept by an Episcopalian clergymant My nunt immediately set me on a conrse of English grammar, and of reading ancient and modern history. I had a kind of tutor also for writing and arithmetic. To conquer the idle habits I had acquired for three years was no easy task, and
perhape no other person could have induced me $w$ application, or have given me a taste for reading but my aunt, whose gentle and polished manners gained her alikc our love and our tespect. My dear mother's household cares gave her litle time to attend to us, until after tea, when she, my aunt, and sisters sat down to work, and I read to them for two or three hours, which would have been very tiresome, but for intervals in which my mother and aunt pointed out to us the beauties of particular passages, and the virtues and vices of the different characters which history presented to us, and the consequent effect on their lives and fortunes. But the Briish classics and our best Dramatists were to our young and just expanding minds a source of the purest deligbt. Tbis state of innocent enjoyment and consequent happiness, continued, with litule intermission, for five years, until I began to fancy myself a man, and that I ought to break through the trammels of female influence and control. These ideas were much strengthened by the conversation of servants and the country people in our neighbourhood, who, as all the lower clnss of Irish ever have been, are the most cunning and fulsome flatterera in the world. I now betook myself to coursing with grcyhounds, shooting, fishing, \&c., instead of taking the advantage offered me by the Rey. Roberl Sturrock, of studying, at his Academy of White Park, within one mile of my mother's house, where be ingructed some of the first gentlemen's sons of the kingdom; among whom were my two friends and neighbours, Edmund and Francis McNaughton; the eldest now a Lord of the Treasury, and member of Parliament for the county of Antrim ; the second Sir Francis, at present Chief Justice of Calcutta; the Hon. Rober Stuart, efterwards too well known as Lord Caslereagh; James Alexander, nephew to the Earl of Caldon, and now an India Director and member of Parliament, with many more, whose subsequent history I am but little acquainted with. All the advantages of such society, and the inatructions of a man of examplary piety, learning, and the most polished manners, who was an terms of friendship and good neighbourhood with my mother and akph I foolishly abandoned, for the pursuit of field sports and seill more debasing gratifications. In my seveoleenth year I was sent to Belfast to take charge of the Water Works, and for some time attended steadily to my business, by which means I raised the value of the property considerably; hut I had still a great deal of idle tinse on my hands, and having sufficienk means of indulging myself, I squandered my time and money in variny and dissipation, with no other saving quaity but a detestation of low and vulgar company, into which I wis never led but once or twice, and for which I paid dearly both in purse and peace of mind.

In the midst of all my folly and extravagance I still retained a love of reading. But unfortunately I had no guide or instructor to make a propar selection for me , so that the trash of a circulating library was read over with very little taste or discrimination, and was therefore a mare sacrifice á
time. I as yet knew nothing of polities, and had been only taught that loyalty wo my king was absolutely necessary to every gentleman. My ideas of love of country were vague. I thought obedience to the Laws, and respect for the constitution, constituted all the duties of a Patrion I was too blind and ignorant to perceive that my country, properly speaking, had no constitution ; and that the laws forced upon her by another state were unjur and oppressive, and rudiously calculated to repress every effort at improvement or independence. I seldom or ever recollect dates, but believe volunteering was at its height about 1783 or 4 ; but I never would join any of their corps, being possessed with the idea that they were on the eve of rebellion, when only temperately, hut firmly, demanding their just and natural rights, so long withheld by an ignorant, selfish, and jealous government. The corporation of Belfest now fixed their eyes on the Water Works as a meane of gready increasing their wealth and influence; and had art and addreas sufficient to iaduce the weak and unprincipled Earl of Donnegal to break the promise of his ancestor, to grant the property in perpetuity to my family. It is true the firse lease was re newed when etill there were ten or fifteen years unexpired, but the second was now drawing to a cloee, and I took advantage of his lordship's being on a visit to his Irish estates to solicit the fulfilment of bis promise, or at least a renewal of the lease. But as I could not succeed, from the reasons already mentioned, 1 made up my mind not to remain a hurthen on my family, but to go abroad as soon as I could procure sufficient means. In the interim I sent out my dear brother William to New York, where he bound himself apprentice wa merchant of the name of Henry, who in two or three years failed, but was so pleased with him as to give him up his indentures. He then went into company with a Mr. Samuel Hill, brother to the Rev. Charles Hill of Ballycartle, my particular friend. They did business for some time at New York, and then removed to Albany, where Mr. Hill married. As to myself, I continued my idle and debauched life for several years, until the lease of the Water Works was within four or five years of expiring, when, finding that all my efforts to obtain justice from Lord Donnegal were unaviling, I , by the consent of all the parties concerned, raised $£ 400$ on the remainder of the lense from Mr. Alexander, his Lordship's agent for the Belfast estate, giving up the proporty as security ; the remaining avail to be accounted for to my family, which by the way, was never done; and then prepared to leave the scene of my follies and misfortunes. In 1789 Lord Macarney came to visit his castle a Lisanore, within 14 miles of my mother's residence, where I waited on him with a letter of introduction from my aunt. He received me with great kindness, and after stating to him my disappoinuments at home, I mentioned my wish to goto India, from whence he had recently returned, and where of course his interest chiefly lay. He took me into his library and showed me $n$ list of $\mathbf{2 6}$ persons he was bound to provide for, condescendingly adding, be
had not advanced himself in the wortd wiblout being under obligations to many friends, whose services it was his first duty to repay; he however said if I was determined to go to Indin in preference to any where else he would, during the winter, do everything he could to forward my wishes. He farther remarked that we heard a great deal of those who came from India with fortunes, but not a word of the hundreds who fell victims to the climate, and the excesses into which young men were liable to be led in such a voluptuous country. I then proposed to go to Canada, in case of procuring letters to Lord Dorchester, the then Governor General. To this he in the most friendly manner assented, and said, though he himself was not on terms of intimacy with Lord D. his friends were, and that I shonld write to him when nearly ready to set out, when he would for ward me letters from Lord Liverpool and Mr. Brook Watson, two of Lord D's. best friends, whose recommendations would have the greatest weight with him. Accordingly in spring, as soon as my affairs were all arranged, I wrote to his Lordship, who in a post or troo sent me the promised letters, accompanied with one from himself containing the most friendly advice and good wishes. And now that I have hrought my brief and little eventful history to the eve of that step on which my subsequent fortune so entirely hinged, I shall lay down my pen and give you a little reprieve from the tedium of a recital so litile interesing even to a partial ear.

> Believe me ever truly your's,
> JOHN JOHNSTON.

## LETTER III.

## St. Mary's Falls, 26th Feb. 1820.

yy dear sir,
Ill health, indolence, and the pursuit of idle amusements, which only end in panity and vexation of spirit, have diverted my attention from writing for some time past. But I now resume the subject with the hope of pursuing it with more steadiness and perseverance than I have hitherlo done. I had many acquaintances in Belfast and the neighboring counues, which, while we are linked in the pursuit of pleasure, we are apt to call friends, but the moment a change takes place in our circumstances, the illusion vunishes, and as if touched by the spear of Ithurial, they soon start up in their proper form, and the chain of conneetion is broken for ever. However, 1 had the consolation of two particular exceptions, in my excellent and ever esteemed friends, Doctor Mc Donald and Narcissus Bath over whom the lapse of time and change of circum-
stances bave had no other effect than to prove, that trae honour and worth, such as theirs, are immutable.
In the latler end of June, 1790, I embarked or board the Clara, Captain Collias, for New York. We were detained for several hours of Carickfergus in the middle of the night, by a Naval Officer and boat's crew, who took possession of the ship, and made a strict search for British seamen; though then at peace with the United States. I represented to the officer the cruelty and injustice of detainiog an outward bound vessel with a fair wiad, especially as the captain assured hin that there was not a man of the descripition he sought for on board; but when I saw he was determined to detain the ship all night, I addressed a letter to the Marquit of Downshire, to whom I had the honour of being particularly known, état. ing the circumstance. I read the letter publicly, and prepared to send it by a gentleman just going ashore, but ehortly after, "the man of brief authority," gave up the ship to the captain, and having eaten a saccik and drank a pint of half and half grog, he civilly bade us good night and a aste passage. I had never been al sea before, though bred up on the compar which caused me to suffer more from sea sickness than some of my fellow passengers. I lay down on the floor of the round bouse, from whence no inducement could tempt me to stir for nearly two days; at the expiration of which I found myself perfectly well, and as hungry as a hawk. I got a beef ateak and some porter, and never felt sea sickness after. We wero four who messed together in the round house with the captain, the Roy. Charles Gray of Coleraine ; the Rev. Robert Cathcart, an old friend and neighbour ; and a Mr. Mathews from Edinburgh. We fared as well as people at aea could possibly wish, and had such an abundance of wine, porter and apirite, thal I was enabled to bestow a large hamper of wine, spruce beer, oranges and lemons, sent on board for me by my friend Mr. Balt, amongst the passengers in the hold, several of whom were sick. Our fare was ouly ten guineas each, though since risen to forty; such has been the adrance in living within the last thirty years! We had a favoumble passage until we arrived off the Azores, where we were chased by a sixity gun ship, which having boisted Spanish and then French colours, induced the capkain to believe was one of the ships of war presented to the Algovines by France. He altered his course and put before the wind, the tip repeatedly firing at us; hut our vessel being a prime sailer, and lighb, we soon increased our distance, and the next morning, when scarcely riaible, she altered her course and gave up the chase. The second or third day after, when croseing the Gulf stream, we were overtaken by a heavy gale, which raised a tremendous sea. In the night our cabin windows were stove in; we bad two or three feet water on the floor; trunks and boxes broke from their cleatings; the poor people in the under birthe were all afloat, and such a scene of terror and cotfusiop wook place as 1 ahall never forget. Some were praying aloud, othére' con-
fessing their sins, others screaming from fear and pain, whilet escaping from drowning in their births; and at every roll of the ship dashed into contact with trunks, chests and boxes. Amongst the latter sufferers was a Mra. Lindsey, the wife of a clergyman from the Highlands of Scoland. Whilst sprawling on the floor she was sruck in the head by an iron bound yunk, which laid it open for about three inches. When candles came down, and the dead lights lashed in, the scene exhibited such a mixture of the frighful and ludicrous as fairly surpassed description; poor Mra. Lindsey, who at best might have passed for one of the witches in Macbeth, now looked a perfect Hecate ; her matted locks dripping with gore, and her vulgar unmeaping countenance distorted into a most unearthly grin. No one pitied ber or her fanatic hasband. He had made himself particularly olnoxious to me from his language to the captain when chased by the Algerine. He told bim it was an act of cowardice to rub away from any veseel whilst we were all Englishrmen; with a great deal more of the most illiberal and vulgar abuse. The caplain mildly answered that he could appenal to most of his men, who had sailed with him when commanding a privateer during the revolutionary war, whether be bad ever evioced any sigos of cowardice when in conflict with the enemy? But now, as accountable to his owners for the ship, and to the passengars for their safety, he only performed his duty by avoiding danger, even supposing the vessel was not what we supposed her to be I had at length to interfere, and sent the very Rev. Mr. Lindsey to bis cabin rathar precipitately.

Nothing farther occurred worth noting until we got in sight of Long Island, which, as we approached, the trees seemed to start one after another from the water, and the seenery every instant developed new and interesting benuties; but on rounding Governor's Island, when the city, like a splendid amphithearre, burst upon the vicw, I was absolutely transported with pleasure and delight We came to our moorings after sunset, and 1 slept on board, that I might put my foot on American ground the day of my birth; having just attained my 28th year. And as this begins a new epoch in my existence, I shall here conclude the atory of my voynge. Remaining ever truly and affectionately yours.

JOHN JOHNSTON.

## LETTERIV.

## St. Mary's Falls, 1st March, 1828.

## MT DKAR Ble

The first thing that struck me on entering New York wat the kindneas and urbanity of the people. I had asked my three fellow passengers
to breakfast with me, and entered inn the first coffee house we saw. The people wold me they were not in the habil of providing meals for those who called at their house, but as we were strangers, hey would give us the best breakfast they could : accordingly we had fresh roils, excellent buler, fresh eggs, creann, tea, coffee, smoked beef and ham, for about one ahilling sterling each, which I thought augured well for our future comfort whiles in the country. I thea went and called upon Mrs. Sadler, in Waler street, who was a distant connection of ray mother's. I found her and Mr. Sadler himself, kind, friendly, and hospitable. Tbey insisted on my residing with them whilst I ramained in cown. Mr. Sudler then Look me to Hill \& Johnsion's store, and I soon found myself in the arms of the best and most affeclioante of brothers. I passed a very happy week in New York, and saw in church the great and good Washington, to whom I should have had the bonour of being introduced, had I boen able to malre a longer atay : but my passage was taken for Albany in a fine sloop, called the Hibernia, Captain Moor, where for the firs time I saw my national flag displayed in all its beauty. We had a delightful passage of three daya, though we stopped repeatedly to put ashore passengers and take in others. The romantic besuties of the Hudson have been so oflen and ably deacribed, that any atteropt on my part would be absolute prosumption. Amongat my fellow possengers were several genteel wellbred ladies. The men were plain, friendly, and unafected; and I found a very agreeable companion in a Mr. Noble, who was going to visit an estate hia father bad lately bought near Jobnstown, in the centre of the state of New York.

We put up at Lowis's Hotel, then the first in Albany; where we spent four or five days very pleasantly. I one day took a stroll for about a mile up the hill from Mr. Lewis's, and saw five or six men, all armed with riflea, dash out of the wood to my left. I was at first a little started at their uncouth appearance, hut they accosted me civily, and said they prestomed I was a stranger, from my walking unarmed so far from the city. They told me they were in porsuit of a pack of wolves that had atacked a gendeman oo horseback, the day before, on the very place where we now ctood; when nothing but the power and speed of his horse saved him. The horse was cut in several places, and the gentleman's boots nearly torn off his legs-you may think I was very thanlful for the warning. My informants entered the wood on the opposite side of the road, and I did not pursue my walk any farther in that direction. I gor acquainted with a Mr. Bedient of Boston, who was ou his way to Montreal, as well as myself; we therefore bired a waggon between ua, there being no other mode of conveyance. We travelled through a fine but only partially cultivated conntry, until we carae to Saratoge, where the scenery was dark and gloomy, and the roede moat intolerably bad, being made of round loge
laid beaide each other, forming causeways often for miles. Theae roads I was informed were made by general Burgoyne in his ill-conducted, and consequently ill-fated expedition. I saw the height on which the gallant Frazer fell, and went over part of the battle ground with painful and hrmiliated feeliogs, which I was obliged to conceal, as no one wouk have sympathized with me. How different are my present ideas on the subject, when pride and prejudice no longer blind my eyes, and I can trace the hand of Omnipotence, baffling the efforts of tyrannic power to strangle the infant Hercules, who is destined to give law to the western world! I do not now recollect whether we slept more than one night on the road from Albany to Fort Edward, but we arrived late in the evening, and Mr. Bedieot immediately hired a hatteau to take us down Lake George early in the morning; which deprived me from visiting the ruins of the Fort. The passage down the Lake was beautiful, and the scenery romantic in the highes degree. We stopped at the only bouse then on the borders of the Lake: I think the place was called Ramlesnake Point There I saw a hunter for the first time His costume was so different from anything I had hitherto seen, that I conceived him to be an Indian, but on accosting him found he spoke good English. He told me he had been in the woods three months, and had not been as auccessful as usual: he had two or three dogs with hirs, the merest skeletons I ever beheld. He told me that in a fornight he would make them quite fat, by feeding them on ratlesnakes, for which purpose he had come to the Lake, where they were abundant; as also to refresh himself. Cooper's description of Leatheratocking has repeatedly recailed this man to my mind,

In the evening we passed the rock called Roger's leap, which certainly was a feat of activity few men would be equal to, unless pursued as he was by an unrelenting foe; which reduced it to a mere matter of "neck or nothing," with him.

We passed the ruins of Ticonderoga in the night, and slept at an ion, the lower story of which was literally washed by the wuters of Lake Champlain; here we were obliged to spend a day before we could procure a boat to convey us down to St. John's at its northern extremity. We passed the first night at a blacksmith and farmer's, where we bad every thing clean and comforable; the contrast between their mode of living and the beings we call farmers in the north of Ireland was painfully striking. The second night we passed at a Judge McNeale's, who I found was a descendant of the McNeales of Clogher, near Bush Mills, and Giant's Causeway: the estate when I left home, was possessed by Bir William Duncan, late of Calcutta in India.

We arrived at SL John's in the night ; the commandant had gone to bed, and I was obliged to wait more than an hour in the guard house before ! got liberity to seek an ina. In the morning I met Lieut. Boyd of Clare
near Ballycastle, in the north of Ireland, an old acquaintance and neighbour with whom I spent the day.

I took a calaish from SL Johns to Laprairie, and then hired a canoc and man to take me over to Montreal. The fellow took me to a small island about a mile above the town, where be landed and went into the wood. I waited in the canoe for near an hour, and then went in search of him. I found him skulking in the wood. There was something so sinister in his looks, that I began to suspect him of a design to rob me. I made him come to the canoe and embark, swearing tbat if he did not take me to the main land I would split bim to the teeth with my paddle When we got opposite the windmill above the town, I made bim land and shoulder my pormanteau, and thus marched him before me into town. I was directed to O'Sullivnn's coffee house, where I took up my abode, intending to reser a faw days before I proceeded to Quebec ; chiefly that I might get over the effects of the Musquiro bites, by which I was absolutely deformed and feverish. I bad brought over with me a few guineas of the latex eoinage, one of which I gave Mr. O'Sullivan to get changed, and had a hearty laugh at his ignorance and impertinence, when he turned it in hir fingera, and with a look half wise half cunoing said, It is a very prety counder. I told him to go and get it weighed; and on hir return he wat full as servile as before he had been insolent The next evening I mot in the coffee room my old acquaintance and friend, Mr. Andrew Todd His family and mine bad been intimate friends, when we were chidren. He was now a parner in the house of Todd, Magill \& Co.; his uncle Lsaac being one of the first merchants in Montreal since the conquest in 1760 . To him I imparted my object in going to Quebec ; be with great candor, and friendship pointed out the chances against my succeeding with Lord Dorchester, and advised me, if noching satisfactory was done for me, to return to Montreal and pase the winter ; and in the spring I should accompany bin to Micbilimachinac, where a fair field was open to adventurers in the Indian trade; to which proposition I gave my assent And now, my dear sir, having arrived at a new reating place, "shall I mot take mine ease in mine ina," only promising to take up the thread of my narrative as soon as you express a detire to hear farther from

> Your ever affectionale, JOHN JOHNSTON.

## INDIAN MYTHOLOGY.

In bringing forward his collection of the hisorical and imgginative uraditions of the Indian tribea, the writer has been amare, that he might, berein, be at the same time the medium of presenting the germs of a future mythology, which, in the hands of our poets, and novelists, and fietivions writers, might admit of being formed and moulded to the purposet, of a purely vernacular literature. So far as his reading of popular literature extends, the tendency of public tarte, to avial itself of such a mythology, (notwihbtanding those who turn up their nose at it, and affeat vast dislike for the "nasty Indians,") and to seize upon it as a basis for the oxbibition of new and peculiar lines of fectitious creations, is distinetly perceprible. This is shown in various ways, but takes ite most formal shape perhapa, if not is exacl era, in a series of legends, which frst appeared, a few yeart ago, in London, under the title of "Wild Scenes in the Prairies and Forest," a volume not as well known as it deserves to be, on this side of the water. This volume is subsequendy known to have come from the pen of the author of "Greysiner," and a "Winter in the Wear" Mr, Hoffran has looked with the eye of an artist, and the taste of a connoisseur, on the ecenees spread before him, in the wide prairies, the towering peaks, the deep, mated forests, and the wide winding lakes of the western world. Wherever his view wha directed, in that wild theatre of wessern life, or at the Alpine sources of his native stream, the Hudson, he has seen the footprints of the red man, and felt rising in his mind, the strong associations which the sonorous aboriginal names of streams and places bave awakened. It io under tuch views of western acenery that he has, in his "Vigil of Faith," inrested with fleah and blood, an aboriginal heory of a future states, and it is in the same spirit that he has cast his tales and legends, and drawn out his geographical descriptions.

There are also frequent evidences in the diurnal and magazino press of the country, of late years, in a kind of mixed himtorical legeads, of a growing taste on this subject. Writers seem, at intervals, at least, to be more aware of the eminent difficulty of getting laurels by following the old track of Grecian mythology, beaten as that track was by Greece herself, and swooshed and polished as it bas subsequenty been by Roman and English and Continental authors. Germany, has to a great extent, rein rigoraved
ancient literatara, and made it national and peculiar, by an appeal to har own myths and popular legends, while our writers, for the most part, are yet endeavouring to redo, reenach, and re-produce, what the barda and essayists of England alone have forever setlled, and rendered it hopeleas wo eclipse. Originality of literature, if it can be produced in the West, as the critics of Europe leave us room to think, must rely on the acenes, associations, and institutions of the West Nor will American literature, we apprehend, ever command the atteation and receive the sealing approbation of the old world, while it is either built with the materials or dresed out and adorned with the cast of literary decorations of her own authors.

These remarks refer exclusively to an imaginative literature, and bave no relation to subjecte of science. The defecte which bave been noticed, in the wide and acaltered range of American magaziaes, and oher periodicales, in city and country, east and weat, oxist in verbosity and redundant descriplion, false sentimenh and erroneous manners. Most of the attempls noxiced, at the same time exhibit vigour, and some talent, but they fail strikingly in those essentials of mental costume. They are, to characterize them by a stroke, English Gigures, drast in moceasins, and holding a bow and arrows.

To render an Indian tule succesoful, Indian manaèrs, and aentimentes, and opinions must be accurately copied. Above all, the Indian mythology and supersilions, as ahown in their religious rites and ceremonies, must be observed. It is this myhology that furnishes the poetic machinery of the native fictions. It does more. It furnishes the true theory of their mental philosophy, and lies at the foundation of their often strange and unaccountable acts and policy. It is by the power of Indian manitoes and the Indian Jersukawns, that all their wonders and impossibilities are performed.

The chief points of failure, in the mere literary execution of attempted Indian legends, consist in want of simplicity, conciseness and brevity. Nohing can exceed the doric simplicity of an aboriginal tale. It admits of scarcely any adjectives, and no ornaments. A figure of speech, or a symbol is employed, in cases where comparisons and illustrations, would be used in English compasition, or where the native language falls short in words. But ordinary scenes and deaires, are expresed in ordinary words. The closest attention, indeed, is required, in listening to, and taking notea of an original legend, to find langunge simple and child-like enough to nurrate what is said, and to give it, as said, word by word, and sentence by aentence. A school boy, who is not yet smiten with tho ambition of style, but adheres to the natural metbod, of putting down no more words than are just necessary to express tho precise ideas, would do it beat And when this has been done, and the original preserved in the words of the Indian story teller, it is ofton but a tisale of common events
which would possess very little interest, were it not for the myetery or melodramic effect, of their singalar mythology. To imitate such a talo successfully, is to demand of the writer an accurate knowledge of Indian manners and customs, often his history and traditions, and always his religion and opinions, with some gleams of the langunge.

In the introduction of the following legend of the origin of the Evil Spirit, it is only justice to it to say, that the false theory and defects alluded to, as marking the popular effort of writers, have been avoided both in manner and matter, to a degree which surpasses any thing of the kind, which has fallen under our notice. It is in fact, completely successful, and furnishes a model for thinge of the kind. It is true to the Indian myths-it possesses the appropriate simplicity of thought. It proceeds by the true modus operandi of the natives of telling the story. Its reasonings are not a white man's reasonings. It depicts the Great Spirit, as being characterized not by christian attributet, but by the reasons and caprices of a man. He maket things to please himself, not knowing exactly what they will be, and when they do not strike his fancy, he casts them aside and makes others. He never sees the end from the beginning. He is alwags trying and trying and "making and making." He is the impersonation in mind, of a perfect Indian philocopher, who only sees and hears, and motes and desires, like any other Indian. He pitches a lump of clay in the water, and it becomes an island. He casts an old woman againot the moon, and there she sticks to this day. (Vide Wyandot Traditions of Good and Evil, No. 3.) He does not reveal any traito-any high moral qualities-anything approaching to the innate holiness of the immaculate Alohim. He is the veritahle Indian master of life-the great Wazheaud or maker; and the iden which Mrs. Smith has eliminated, that Machineto, or the God of Evil, was accidentally created out of the leavings and cast away things of the Creator, helped out with the ravenous and venomovs creatures of the sea and land, is a poetical conception worthy the pencil of Galvator Rosa, or the pen of Dante. We commend it to the pencil of Cbapman.

## MACHINITO, THE EVIL SPIRIT;

REDM FHE LEGENDS OF TAGOD.
BY MRS. E. OAKES SMITH.

[^20]Chmiantroo, being the master of hife, at one time became the origin of a spinit, that has ever since caased himself and all others of bit creation
a great deal of disquiet His birth was owing to an accident. It was in this wise.

Metowne, or as the white people now'call it, Long Island, was origiinlly a vast plain, so level and free from any kind of growh, that it looked like a portion of the great sea that had suddenly been made to move beck and let the sand below appear, which was the case in fact.

Here it was that Chemanitou used to come and sit, when he wished to bring any neww creation to the life. The place being spacious and solitary, the water apon every side, he bad not only room enough, but was free from interruption.

It is well known that some of these early creations were of very great size, eo that very fep could live in the same place, and their strength made it difficult for Chemanitou, even to controul them; for when he has given thera certain elements, they have the use of the laws that govern these elements, till it is his will to tale them back to himself. Accordingly, it was the custom of Chemanitou, when be wished to try the effect of these creatures, to set them in motion upon the island of Metowac, and if they did not please him, be took the life out before they were suffered to escape. He would set up a mammoth or oher large animal, in the centre of the istand, and build birn up with great care, somewhat in the manner that e cabin or a cance is made.

Even to this day may be found traces of what had been done here in former years ; and the manner in which the earth sometimes sinks down [even wells fall out at the botom here,] shows that this island is nothing more than'a great cale of earh, a sort of platter laid upon the sea, for the convenience of Chemanitou, who used it as a table upon which be might work, never having deaigned it for anything else ; the margin of the Chatiemac, (the stately sman,) or Hudson rivet, being beter adapted to the parposea of habitation.

When the master of life wished to build up an elephant or mammol bes placed four cakes of clay apon the ground, at proper distances, which were moalded into shape, and became the feet of the animal.

Now sometimes these were left unfinished; and to this day the green tassocks, in be seen like litile islands about the marshes, show where theed cakes of clay had been placed.
As Chemanitur went on with his worts, the Nereanawrilos for water spirits, the Puct-wob-nontes, (Fairies ") and indeed all the lesser manit twek, ated to come and look on, and wonder what it would be, and how it woold act.
When the animal was quite done, and had dried a long time in the sum, Chermanitor opened a phece in the eide, and entering in, remained were binay daye

[^21]When he came forth, the creature began to shiver and sway from mide to side, in such a manner as abook the whole island for many leagues If bis appenrance pleased the master of life he was suffered to depart, and in was generally found that these animals plunged into the sea upon the north side of the island, and disappeared in the great foresta beyond.

Now at one time Chemanitou was a very long while building an animal , of such great bulk, that it looked like a mountain upon the cestre of the island; and all the manitioes, from all parta, carne to see what it whs. The Puck-wud-jinnies especially made themselvee very merry, capering behind his great ears, situing within his mouth, each parched upon a tooth, and runoing in and out of the socketa of the oyes, thinking Chernanitou, who was finishing off other pares of the animal, could not see them.
But he can see right through every thing he has made. He was gled to see them so lively, and bethought himself of many new creations whilo be watched their motions.

When the Master of Life had completed this large animal, he was fearful to give it life, and so it was left upon the inland, or worktahle of Chemanitou, till its great weight caused it to hreak through, and sinling pardy down it stack fass, the head and tail bolding it io such a manner as to prevent it from going down.

Chemanitou then lifted up a piece of the back, and found it made a very good cavity, into which the old creations, which failed to please him, might be thrown.

He sometimes amused bimsedf by making creatures very small and setive, with which he diaported awhile, and finding them of very little ano in the world, and not so elfractive as the litte Vanishera, be would rake out the life, holding it in himself, and then cast them into the cave made by the body of the unfinished animal. In this way great quanticiee of very odd ahapes were heaped together in this Roncomcomon, or "Place of Fragmeata."

He was always careful to firet take out the iife.
One day the Master of Life look two pieces of clay and moulded them into two large feet, like those of a panther. He did rot make four-there were two only.

He srepped bis own fees into them, and found the tread very light end apringy, so that he might go with great speed, and yet make no noise.

Next he built upa pair of very isill legs, in the shape of his own, and made them walk about awhile-he was pleased with the motion. Then followed a round body, covered with large scales, like the alligator.

He now found the figure doubling forward, and be fastened a long black onake, that was gliding by, wo the beck part of the body, and lot it wind iself about a sapling near, which beld the body uprigbh, and mado a very good tail.

The chouldere were broad and strong, like those of the bafaloe, and covered with hair-he neck thick and short, and full at the back

Thus far Chemanitou had worked with little thonght, but when he eame to the head he thought a long while.

He took a round ball of clay into his lap, and worked it over with great care. While he thought, he pated the ball upon the top, which made it very broad and low; for Chemaniton was thinking of the panther feet, and the buffaloc neck He remembered the Puck-wudjinniee playing in the eye sockets of the great unfaished animal, and he bethought him to set the eyes out, like those of a lobeter, so that the animal might see upon every side.

He coade the forehead hroad and full, but low ; for here was to be the wisdom of the forked tongue, like that of the serpent, which ahould be in bis mouth. He should all thinga, and know all things. Here Chemanitou stopped, for he sam that he had never thought of such a creation before, one with but two feet, a creature who should stand upright, and see upon every tide.

The jaws were very strong, with ivory leeth, and gill upon either side, which arose and fell whenever breath passed through tham. The nose was like the beak of the vulture. A tuft of porcupine quills made the acalp-lock

Chemanitou held the bead out the leagh of his arm, and turned it frrat upon one side and then upon the other. He passed it rapidly through the air, and saw the gills rise and fatl, the lobeter eyes whirl round, and the rulure noes look keen.

Chemanitou became very sad; yet he put the head upon the shouldern It was the first time he had made un upright figure.

It seemed to be the first idea of a man.
It was now nearly night ; the bets were flying through the air, and the roar of wild beasen began to be heard. A gusty wind swept in from the ocean, and passed over the island of Met6wac, canting the light sand to and fro. A heary scud was akimming along the borizon, while higher up in the aky was a dark thick cloud, upon the verge of which the moon hung for a moment, and then was shut in.

A panther came by and ztayed a moment, with one foot raieed and bent inward, while he looked up at the image, and smett the feet, that were like his own.

A vulture swooped down with a great noise of itw wings, and made a dash at the beak, but Cbemanitou held bim back.

Then came the porcupine, and the lizard, and the snalice, ach drawn by, its cind in the image.

Chemanitou veiled his face for many houra, and the gusey wiod awept by, but he did not stir.

He saw that every beast of the earth seeketh itu kind ; and that wheth is bike draweth in likeaets unto himelf.

The Master of Life thought and thought. The iden grew into his mind that at some time he would create a creature who should be made not after the things of the earth, but after himself

He should link this world to the spirit world,-being made in the likeness of the Great Spirit, he should be drawn unto his likeness.

Many days and nights, whole seasons, passed while Chemanitou thought upon these things. He saw of things.

Then the Master of Life lified up hit head; the stars were looking down upon the image, and a bat had alighted upon the forebead, spreading its great wings upon each side. Chemanitou took the bat and beld out ite whole leallery wings, (and ever since the bat, when he reste, lets his body hang down,) so that he could try them over the head of the imageHe then took the life of the bat away, and twisted off the body, by which means the whole thin part fell down over the head, and upon each side, making the ears, and a covering for the forehead like that of the hooded seppent

Chemanitou did not cut off the face of the image below, be went on and made a chin, and lips that were firm and round, that they might shot in the forked tongue, and the ivory teeth; and he knew that with the lips and the chin it would smile, when life should be given to it

The image was now all done hut the arms, and Chemenitou sam that with a chin it must have hands. He grew more grave.

He had never given hands to any creature.
He made the arms and the hands very beauliful, after the manner of hia own.

Chemanitou now took no pleasure in his work that was done-it wes not good in his sight.
He wished he had not given it hends ; migben it not, when trueted with life, might it not begin to createq might it not thwart the plans of the manter of life himself!

He looked long at the image. He saw what it would do when life ohould be given it He know all thingre

He now put fire in the image: but fire is not lifa
He put fire within, and a red glow patsed through and through ir The fire dried the clay of which it was made, and gave the image an esceedingly fierce aspect. It shone through the scales upon the breact, and the gills, and the bat-winged eare. The lobeter eyes were like a living coal.

Chemanitou opened the side of the image, bed he did sat emer. He hwd given it bando and a chia.

It could mile like the manitoos themselven.
Fiv mede it writi all about the iuland of Metowac, that he might me thow it would aet This he did by means of his will

Hhb now put a lifice life into it, but he did eot mite oat the fira. Cle manitou eaw the aspect of the creature would be very terribles and yect them
he could smile in such a manner that he ceased to be ugly. He thought much upon these things. He felt it would not be best to let auch a creature live; a creature made up mostly from the bessts of the field, but with hands of power, a chin lifiling the head upward, and lips holdiag all things within themselves.
While he thought upon these things, he took the image in his bands and cart it into the cave.

But Chemanitou forgot to take out the life!
The creature lay a long time in the cave and did not atir, for his fall was very great. He lay amongst the old creations that had been brown in there without life.
Now when a long time had passed Chemanitou heard a great noise in the cave. He looked in and saw the inage sitting there, and he was trying to put together the old broken things that had been cast in as of no value

Chemanitou gathered together a vast heap of stones and sand, for large rocks are not to be had upon the island, and stopped the mouth of the cave. Many days passed and the noise grew louder within the cave. The earth shook, and hot smoke came from the ground. The Manitroes crowded to Met6wac to see what was the matter.

Chernanitou came also, for he rementered the image he had cast in there, and forgoten to take amay the life.
Buddenly there was a great rising of the stones and sand-the sky grew black with wind and dust. Fire played about the ground, and water gushed high into the air.

All the Manitoes fled with fear; and the image came forth with a great noise and most terrible to behold. His life had grown strong within him, for the fire had made it very fierce.
Everything fled before him and cried-Maohortro-Machinrio-which means a god, but an evil god I

The above legend is gathered from the traditions of Iagou, the great Indian narrator, who seems to have dipped deaper into philosophy than mox of his compears. The aboriginal language abounds with stories telated by this remarkable personage, which we hope to bring before the public at some future time. Whether aubeequent eventa justify the Indian in making Long Leland the arena of the production of Machinito or the Evil Spirit, will seem more than apocryphal to a white resident. However we have nothing to do except to relate the fact as it was related.

As to these primitive metaphysics, they are at least curious ; and the coolness with which the fact is assumed that the origin of evil was accidental in the process of developing a perfect humanity, would, at an earlier day, have been quite appalling to the schoolmon.
E. O. $\mathbf{s}$.

## CORN PLANTING AND ITS INCIDENTS.

(concluded mor page 83.)
If one of the young female huskers finds a red ear of coro, it is typieal of a brave admirer, and is regarded as a fitting present to some young warrior. But if the ear be crooked, and tapering to I point, no matter what colour, the whole circle is set in a ranr, and wa ge min is the word shouted aloud. It is the symbol of a thief in the cornfield. It is considered as the image of an old man stooping as he enters the lot Had the chisel of Prazitiles been employed to produce this image, it could not more vividly bring to the miods of the merry group, the idea of a pilferer of their favourite mondamin. Nor is there any doubt on these oceasions, that the occurrence truly reveals the fact that the corntiold has actually been thus depredated on

The term wagemin, which unfolds all these ideas, and reveals, as by a talisman, all this information, is derived in part, from the tri-literal tem Wawead, that which is bent or crooked. The termination in $g$, is the animate plural, and denotes not only that there is more than one object, but that the subject is noble or invested with the importance of animated beings. The last nember of the compound, min, is a shortened sound of the generic meen, a grain, or berry. To make these coalesce, agreably to the native laws of euphony, the short vowel $i$, is thrown in, between the verbal root and substantive, as a connective. The literal meaning of the term is, a mass, or crooked ear of grain; but the ear of corn so called, is a conventional type of a little old man pilfering ears of com in a cornfield. It is in this manner, that a single word or term, in these curions languages, becomes the fruitful parent of many ideas. And we can thus perceive why it is that the word wagemin is alone competent to excre merriment in the busking circle.

This term is taken as the basis of the cereal chorus or corn song, ss sung by the nombern Algonquin tribee. It is coupled with the phrase Paimosaid, a permutative form of the Indian substantive made from the verb, pim-o-8a, to walk. Its literal menning is, he who walks, or the walcer; but the ideas conveyed by it, are, he who walks at night to pilfer corn. It offers, therefore, a kind of parallelism in expression, to the preceding term. The chorus is entirely composed of these two terms, variously repeated, and may be set down as follows:

Wagemin,
Wagemin,
Paimosaid.
Wagemin,
Wagemin,
Phimesaid.

When this chant has been sung, there is a pause, during which some one who is exper in these things, and has a turn for the comic or ironic, otters a short speech, in the manner of a recitative, in which a peculiar intonation is given, and generally interrogates the supposed pilferer, as if he were present to answer questions, or accusations. There can be no pretence, that this recitative part of the song is always the same, at different times and places, or even that the same person should not vary his phraseology. On the contrary, it is offen an object to vary it. It is a perfect iscoprovisation, and it may be supposed that the native composer is always netuated by a desire to please, as much as possible by novelty. The whole object indeed is, to keep op the existing merriment and excite fun and laughter.

The following may be taken as one of these recitative songs, written out, on the plan of preserving the train of thought, and some of those peculiar interjections in which these languages so much abound. The chorus aloue, it is to be observed, is fixed in its worde and metre, however transposed or repeated, and, unlike an English song, precedea the stanza or narrative.

COHN BONG.

| Cereal cborus. | Wagemin I wagemin I <br> Thief in the blade, |
| :--- | :--- |
|  | Bligbt of the cornfeld |

Recitative. See you not traces, while pulling the leaf, Plainly depicting the taker and thiof? Bee you not sigus by the ring and the spor How the man croucbed as he crept in the lol 3 Is it not plain by this mark on the salk,
That he was beavily bent in his walk?
Old man be nimble! the old should be good,
But thou art a cowardly thief of the wood.
Cereal Chorus.

> Wagemin ! wagemin
> Thief in the blade, Blight of the cornfield Painosaid.

> Recitative. Where, litile tamer of thingt not your own-
> Where is your rattle, your drum, and your bone?
> Surely a Walker so nimble of speed,
> Surely he muat be a Meta* indeed.

## - A Jumplor.

See how he stoops, as he breaks off the ear, Nushkal ${ }^{10}$ he seems for a moment in fear ; Walker, be nimble-oh! walker be brief, Hooh ! $\dagger$ it is plain the old man is the thief.

Cereal chorua $\quad$| Wagemin ! wagemin ! |
| :--- |
| Thief in the blade, |
| Blight of the cornfield |

Paimosaid

Recientive. Wabuma it corn-taker, why do you lag? None but the stars see you-fill up your bag ! Why do you linger to gaze as you pull, Tell me, my litle man, is it moal full? A-ia t§ see, a red spot on the leaf, Surely a warrior canno be a thief! Ah, little night-hief, be deer your pursait, And leave bere no print of your destardly fool.

## TO HEALTH.

nt the Late jons sonncton, mea.
Health ! dearest of the heavenly powers,
With thee to pass my evening hours,
Ah! deign to bear my prayer;
For what can wealth or beauty give, If seill in anguish doomed to live

A slave to pain and care.
Nos sovereign power, nor charms of bowe,
Nor social joys the heart can nowe,
If thou refuse thy aid ;
E'en friendship, sympathy divina 1
Does, in thy absence, faintly shine,
Thou all-inapiriug maid.
Return then, to my longing soul, Which sighs to feel thy sweet control

Trensfused through every pore;
My muse, enraptured, then sha!l sing
Theo-gift of heaven's all bounteous king,
And gratefully adore.
Febrwary 4, 1807.

# THE RED RACE OF AMERICA. 

PART FIPTH.

## TALES OF A WIGWAM.

Terser legendary tales are collected from Indian tradition, as it now exists. They are not creations of the writer's imagination, but results of his researches. This constitutes at once their peculiarity, and their value. They are-the wildest and simplest of them, so many media for the exhibition of Indian thought, Indian reasoning, Indian mythology, and Indian opinion. They open a vista into the structure of Indian mind, which was before unknown.

The very existence of such legends in the oral traditions of the tribes, is a discovery of recent date. The writer first found them, among the warlike and hunter tribes of the Odjihwas, at the outlet and around the borders of Lake Superior; and this district has, to the present time, furnished the most fruitful source of them. It was at this place, at the Falls of Bt. Mary's, that a gay and light hearted adventurer from the fashionable eircles of the gentry and clergy of the north of Ireland seated himself, a few years after the close of the American Revolation, and linked in matrimonial ties with a noble chieflan's daughter, the Erse and Algonquin races. A family of four sons and four daughters ensued, which had the further poculiarity, that in their education and manners, they exhibited a bleading of the refinement and taste of the father, with the strong love of country and peculiar nationality of the mother. If the red man has been correctly depicted as "a stoic of tbe woods," here were sources of warmth and of enthusiasm, and a love of social life, which might be fairly said to hring a counterpoise. Both the languages were spoken and written and read, with the same ease, fluency and propriety. Mr. Johnston himself was a man of extensive reading, of a taste for letters, and of elegant and casy man-
nera and refined boepitality. There never was, perbapa, a anion between the European and the Indian stocks, so auspicious to the acquisition of a true knowledge of Indian history, manners and customs. The connexion of Bir Willism Jobnson, with the Mohawk tribe, might indeed, have been equally sa, had the tasses of that distinguished individual not led bim rather to the sterner realities of war and national policy. The later too, was rather a union of the heroic age of the race, when they were etill feared and courted, than of the milder era, which began to dawn on them before the close of the 18th century.

John Johnston, Esq. had all the enthusiasm and warmth of character of his nation. He went into the Indian country, in a spirit of romentic adventure, and he abode in it, in a spirit of honor, and just impulse to the ties of nature. It ia from the various merabers of this family that a large number of these legends bave been derived. They embrace the traditions of Wabojeeg, of Maidosagee, of Nabunwa, of Paigwaineash, and of many other individuals, male and female, who were once well known, and some of them, distinguished in that quarter. Others are due to individuals of the same general area of country, who were either connected by descent, ar intermarriage with the same people, or with their kindred, the Ortowas, the Pottowatomies and other tribes. Oppertunities for extending the enquiry and increasing the collection, were sought during various journeyt in the west, south-west, and north, and many proofs received, of the exisreoce of a like story-telling faculty, and the existence of oral legenda, among other stocke not related to the Algonquins. These were found, not only among tribes where they were expected, but also among the Wyapdote and the Dacotahe, or Siour.
A fow specimens of them were published, in my Travels in the Casiral Portions of the Mississippi Valley in 1825, and in the Natrative of an Expedition to Ilasca Lake in 1834. Feeling that they opened a new and mot interesting meaps for considering the mental characteristics of the race, two octavo volumes, devoted wholly to these legends, were published, under the title of Algic Researches, in 1939. These volumes have been favorably received, and noticed, over a wide area, both in England and America, and an increasing enquiry is made for them. It is under these circutmstances, that I edd to these miscellaneous papers, from my portolio, such of the talea as have not yet been published. I submit these remarks for the irformation of readers who may not have heen apprized of my prior recearches in this department, or who may lie under any misapprehension as to the true character of the legends themselves.

Perhapa a few renarks may not be out of place respectiog the peculiar though-work, and story-craft, exhibited in these creations of the wigwam. They supply, what has heretofore been deemed $a$ wide hiatus in the Indian mind, and denote some of its peculiur suppors, under circumstances of trial and difficully. They show that the man is not, what he has been
confidently represented, a statuo-a cold and carved image of atone, without feelings or sensibilives, thoughts or theories. Truth to tell, we find this anmoved erterior filled up with stores of legendary matter-ofton jumbled and mixed up cogether, without method or order-but so replem un quanuiry, or so curious in character, that we are often tempted to enquire where he could have derived such notions. And be must be a careless reader of the text, who does not perceive in its mythology and opinione, some atriking coincidences between the eastern and weatern continents.

As a general remark, it may be said that amusement and instruction are combined. While the sage amuses the young circle in the lodge with strange adventures of heroes and manitoes, he not unfrequently conveys a moral, or throws in a piece of advice, or some wise admonition, which is evidently deaigned to form the character of the credulous and susceptible group. He makes very large drafls on their credulity, particularly on the acore of the powers of their necromancers and jugglers. It is no longer a wonder that the grown man is so prone to be infuenced by popalar belief and ramonts, of the most improbable events, when the boy has been so thorougbly schooled in this branch.

In framing their toriea there is no litule ingenuity displayed, in covering up their almost total lapsea of bistory and chronology. No knowing, or their ancestors having forgoten the tradition of the world's creation, if they ever bad in, they have, in their stories, delegated the power of creacion, under the symbolic forms of birds and quadrupeds, who did so and so un curtain emergencies. One half of the tales, one would think, have been novented for no other purpose, but to answer the enquiries of inquisitive childran, who are prone in all states of society, to demand of their parento why thi and that is eo, and who made things. It is in this departruent, that the Indian story tellers seem never to be at a lose. They excel in their naive and expert manner of accounting for the origin of thinge, from the dab of red on a bird's wing, to the making of the globe. Spirita of the earth and air abound on every hand, who stand ready to lend their aid by inhabiting buman bodies, or by sending monaters, or giants, or pigmies, to do the needed work. The whole creation is filled with these lesser spinits, of benign or malignant character, who at one moment spring out of a rock, a tree, or a plant, or animate a sbell, an iosect or a bird.

To make pleasure result from surprises agreeable or comical, is one of the manifest objecte of Indian story tellers. Giants are made to quail before men, and extravagant feats beaped upon cbaracters and persons, of wham nothing of this kird is to be expected. One of the leading methods of bringing this abouth, is to make tiny linle beings-a kind of Tom Thumbs, perform exploits. In these the object is, to exhibit the full powera, not only of men, hut of manitoes or gods, in combination with the most diminutive statare. The pith and wit of this kind of stories, of
which a number will be given, are expected to tam, or result from, this apposition of personal appearance, and actual powers.

The red man does not require much to excite his risible facalties, Bomething odd, or droll, in incident or manner, or quaint in exprescion, or the mere tone of voice, is sufficient to set a lodgecircle in a roar. When the matter is explained to a bystander, it is aften very simple or jejune, and entitled to little notice excep what it may derive from its character as illustrating the mannere and customs and opinions of a curions branch of the human family.

Every literary effort should be judged by the law of composition or theory on which it is put forb. And if we lift up an Indian's doorechoth, and take a seat in his lodge-circle to hear stories, we must a ward him hin share, however humble, of this right. We must judge of his efforts by sueh lighte and theoriea of the art of oral narration, and of the laws of fiction, as he gives us, or has received from his fathers. We should at all times well consider and admit the circumstances and opportunities of knowledge under which he puts himself fort as a fabulist, a story teller, or a narrator of traditions. The chief and ofren only value of these talea arisea from their being true transeripts of Indian thought, or if the case requirea the torm, want of thought Their very incongruities ofien make them a picture of the Indian mind, in which incidents queer, and things diverse, follow each otber, in a manner, which characterizes them as peculiar, or original. To originality, therefore, and to authenticity in their collection from true aboriginal sources, we may appeal for their value.

The very fact of the Indian race having storiea and legendary talea at all, is a fact of moment-the discovery throws a new light upon the character of the man; it clothes him with a new kind of drapery, which hangs in graceful folds over his cluh and spear; and given the race, wa apprehend, new claims to the world's consideration.

# THELITTLESPIRIT, OR BOYMAN. 

an odidbwa fairy tale.

WRITEN OUT FROM TES VERBAL NARMATIVE EY THE LATE MRS. H. E. sCHOOLCEAFT.

Terare was once a liule boy, remorkable for the amallnea of his matare. He was living alone with his sister older than himself. Thay wera ocphymen, th6y lived in a beauiful spot on the Lake shore; many large rocke wore
ecatiored around their babitation. The boy never grew larger as he adranced in years. One day, in winter, be asked his sister to make him a ball to play with along shore on the clear ice. She made one for him, bat cautioned him not to go too far.--Off he went in bigh glee, throwing his ball before bim, and running after it at full speed; and he went as fast as his ball. At last his ball flew to a great distance: he followed it as fagd as he could. After be had run for some time, be saw four dark substances on the ice straight before him. When he came up to the spot he was surprised to see four large, tall men lying on the ice, spearing fish. When he went up to them, the nearest looked up and in turn was surprised to see such a diminutive being, and turning to his brothers, he said, "Tia! look! see what a little fellow is bere." After they had all looked a momont, they resumed their position, covered their heads, intent in searching for fish. The boy thought to himself, they imagine me too insignificant for common courtesy, because they are tall and large; I shall teach them notwithstanding, that I am not to be treated so lightiy. After they were covered up the boy saw tbey had each a large trout lying beside them. He slyly took the one nearest him, and placing his fingers in the gills, and tossing his ball before him, ran off at full speed. When the man to whom the fish belonged looked np, he saw his trout sliding away as if of itself, at a great rate-the boy being so small he was not distinguished from the fish. He addressed his brothers and said, "See how that tiny boy has stolen my fish; what a shame it is he should do so." The boy reached home, and told bis gister to go out and get the fish he had brought home. She exclaimed, "where could you have got it? I hope you have not stolen it." "O no," he replied, "I found it on the ice." "How" persisted the sister, "could you have got it there?"-_" No matter," said the boy, "go and cook it." He disdained to answer her again, but thought be would one day show her how to appreciate him. She went to the place he left it, and there indeed she found a monstrous trout. She did as she was bid, and cooked it for that day's consumption. Next morning be went off again as at first. When he came near the large men, who fished every day, be threw his ball with such force that it rolled into the ice-hole of the man of whom he had stolen the day before. As he happened to raise bimself at the time, the boy said, "Neejee, pray band me my ball." "No indeed," answered the man, "I shall not," and thrust the ball under the ice. The boy took hold of his arm and broke it in two in a momeot, and threw him to one side, and picked up his ball, which had bouuded back from under the ice, and tossed it as usual before him. Outstripping it in speed, he got home and remained within till the next moruing. The man whose arm be had broken hallooed out to his brothers, and told them his case, and deplored his fate. They hurried to their brother, and as loud as they could roar threatened vengeance on the morrov, knowing
the boy's speed that they could not overtake him, and he was near out of sight; yet he heard their threats and awaited their coming in perfect indifference. The four brothers the next morning prepared to take their revenge. Their old mother begged them not to go-"Better" said she "that one only should suffer, than that all should perish; for he must be a monedo, or he could not perform such feats." But her sons would not listen; and taking their wounded brother along, sarted for the boy's lodge, having learnt that he lived at the place of rocks. The boy's sister thought she heard the noise of snow-thoes on the crusted snow at a dirtance advancing. She saw the large, tall men coming straight to their lodge, or rather cave, for they lived in a large rock. She ran in with great fear, and told her brother the fact. He said, "Why do you mind them? give me something to eat." "How can you think of eating at such a time," she replied,-" Do as I request you, and bo quick." She then gave him his dish, which was a large nir-qua-dace sheil, and he commenced eating. Jast then the men came to the door, and were about lifting the curtain placed there, when the boy-man turned his dish upside-down, and immediately the door was closed with a stone; the men tried hard with their clubs to crack it; at length they succeeded in making a slight opening. When one of them peeped in with one eye, the boy-man shot his arrow into his eye and brain, and he dropped down dead. The others, not knowing what had happened their broher, did the asme, and all fell in like manner; their curiosity was so great to what the boy was about So they all shared the same fate. After they were killied the boy-man told his sister to go out and see thern She opened the door, but fcared they were not dead, and entered back again hastily, and told her fears to her brocher. He weat out and hacked them in amall pieces, saying, "henceforth let no man be larger than you are now. So men became of the present size. When spring came on, the boy-men said to his sister, "Make me a new set of arrows and bow." She obeyed, as he never did any thing himself of a nature that required manual labour, though he provided for their sustenance. After she made them, she again cautioned him not to shoot into the lake; but regardless of all admonition, he, on purpose, shot his arrow into the lake, and waded some distance till he got into deep water, and paddled about for his arrow, so as to auract the attention of bis sister. She came in haste to the ahore, calling him to return, but instead of minding her he called out, "Ma-mis-quon-je-guna, be-nau-wa-con-zhe-shin," that it, "you, of the red fins come and swallow me." Immediately that monstrove fish came and awallowed him; and seeing his sister suanding on the shore in despair, he hallowed out to her, "Me-zush-ke-zin-ance." She wondered what he meant. But on reflection she thought it must be an old mockesin She accordingly tied the old mockesin to a string, and fastened it to a tree. The fish said to the boy-man, under water, "What is that floating" tho boy-man said to the fish, "Go, take hold of it, swallow it as fam an you
can." The fish darted towards the old shoe, and swallowed it. The boyman laughed in himself, but said nothing, till the fish was fairly caught; be then took hold of the line and began to pull himself and fish to shore. The sister, who was watching, was surprised to see so large a fish; and bauling it ashore she took her knife and commenced curting it opan. When sha heard her brother's voice inside of the fish, saying, "Make haste and release me from this nasty place," his sister was in such haste thal she almost bit his head with her knife; hut succeeded in making an opening large enough for her brother to get out. When he was fairly out, he told his aister to cut up the fish and dry it, as it would lant a long time for their sustenance, and said to her, never, never more to doubt his ability in any way. So ends the story.

## AINGODON AND NAYWADAHA.

#### Abstract

 coneleting of gix brothers, their youngeet sigter, and two aumts. thili pather ang mother bapino died, they were left orphane, theiz obioif, howiver, wat phom the fiatt chazs of chieptaine in their mation.

## NarRated from the oral relation of nabanoi, by MR. GEORGE JOHNSTON.

In the days of this story, wars, murders, and cruelty existed in the country now comprising the province of Upper Canada, or that portion bordering upen Lakes Sirncoe, Erie, and Ontario, which was clairaed and belonged to the powerful tribe of the eight nations of the Nawtowaya. The young men had, on a day, staried for a bunting excursion: in the evening five only of the brothers returned, one was missing. Upon search being made the body was found, and it appeared evident that he had been killed: this gave a great blow to the family, hut particularly causing grear affliction to the sister, who was the youngest of the family. She mourned and lamented her hrother's death, and ahe wept incessanty.

The ensuing year another was killed, and so on till four were killed. The remaining two brothers did all they could to afford consolation to their pining sister, hat she would not be consoled : they did all they could to divert her mind from so much mourning, but all their endeavours proved ineffectual: she acarcely took any food, and what she ate was hardly sufficient to sustain nature. The two hrothers said that they wrould go hunting, which they did from day to day. They would bring
ducks and birds of every description to their sister, in order to tempt hece. appetite, but she persisted in refusing nourishment, or taking very litile At the expiration of the year when the fourth brother bad been killed, the two young men set out upon the chase; one of them returned in the ovening, the other was missing, and found killed in like manner as the ochers had been. This again augmented the aftictions of the young girl; the had been very delicate, hut was now reduced to a mere skeleton. As the expiration of the year the only and last of her brothers, taking pity opon his pining sister, said to her that he would go and kill her some frest venison, to entice her to eat. He started early in the morning, and his sister would go out from time to time, in the course of the day, to see if her brother was returning. Night set in, and so indications of his coming-she sat up all night, exhibiting fear and apprehension bordering upon despairday light appeared, and be did not come-search was made, and he was finally found killed, like all the other brothers. After this event the girl became porfectly disconsolate, hardly usting food, and would wander in the woods the whole day, returning at nights. One of her aunts had the care of her at this time. One day in one of her rembles she did not return; her aunt became very naxious, and searched for her, and continued her search daily. On the teath day, the aunt in her search lost her way and was bewildered, and finally was henighted. While lying down, worn wib fatigue, she thought she heard the voice of some one speaking: she got up, and directing her course to the spoh she came upon a small lodge made of busbes, and in it lay her niece, with her face to the ground. She prevailed upon her to return home. Before reachiog their lodge the girl stoph, and her aunt built her a small lodge, and sho resided in it. Here her aunt would attend upon her daily.

One day as she lay alone in her little lodge, a person appeared to her from on high: he had on whito raiment that was extremely pure, clean and white: he did not touch the earth, hut remained at some distance from it He spoke to her in a mild tone and said, Daughtor, why do you remain here mourning ? have come to console you, and you must arise, and I will give you all the land, and deliver into your hands the persons who have killed your hrothers. All things living and created are mine, I give and take away. Now therefore arise, slay and eat of my dog that lays there. You will go to your village and firsly tell your relatives and nation of this vision, and you must act conformably to my word and to the mind I'll give you, and your enemies will I put into your hands. I will be with you agnin.

After this, he ascended on high. When the girl looked to the place where the heavenly being pointed, she saw a bear. She arose and weat home, and inentioned to her relatives the vision she had seen, and made a request thot the people might he essembied to partake of her feast. She directed her relations to the spot where the beer was to be found; it was
billed and brought to the village, and singed upon a fire, and the feast was made, and the nature of the vision explained. Preparations were immediately set on foot, messengers were sent to each tribe of the six nations, and an invitation given to them, to come upon a given day to the village of Toronto. Messengers were aleo sent all along the nort coast of lake Huron to Bawiting, inviting the Indians to form an alliance and fight against the enemies of the young girl who had loet so many brothers.

In the midst of the Nadowns, there lived two chiefmins, twin brothers They were Nadowas also of the Bear tribe, perfect devils in disposition, cruel and tyrannical. They were at the head of two nations of the $\mathrm{N}_{\mathrm{A}}$ dowas, reigning together, keeping the other nations in great fear and awe, and enslaving them; particularly the Indians of the Deer totem, who resided in one portion of their great village. Indians in connection with the Cbippewas were also kept in bondage by the two tyrants, whose names were Aingodon and Naynoadaha. When the Chippewas received the young girl's meseengers, they were told that they must rescue their relatives, and secretly apprize them of their intention, and the great calamity that would befall Aingodon and Naywadaha's villages and towns Many therefore made their escape; but one remained with his fannily, sending an excuse for not obeying the summons, as he had a great quantity of corn laid up, and that he must nttend to his crops. The Indians all along the nort shore of lake Huron and of Bawiting, embarked to join the general and common cause; they passed through the lakes, and reached Toronto late in the fall. In the beginning of the winter the assernbled allies marched, headed by the young girl. She passed through lake Simcoe, ond the line covered the whole lake, cracking the ice as they merched over it. They encamped at the head of the lake. Here the young girl produced a garnished bag, and she hung it up, and told the assembled multitude that she would make chingodam; and after this she sent hunters out directing them to bring in eighteen bears, and before the sun had risen bigh the bears were all hrought in, and they were singed, and the feast of sacrifice offered. At this place the person from on high appeared to the girl in presence of the assembled multitude, and he stretched forth his hand and shook hands with her only. He here directed her to send secret messengers into the land, to warn the Indians who had the deer totem to put out their totems on poles before their lodge door, in order that they might be koown and saved from the approaching destruction ; and they were enjoined not to go out of their lodges, neither man, woman, or child; if they did so they would be surely consumed and destroyed ; and the person on high said-Do not approach nigh the open plain until the rising sun, you will then see destruction come upon your onemies, and they will be delivered into your hands.

The messengers were sent to the Deer Totems, and they entered the own at night, and communicated their message to them. After this ald
the Indians bearing that mark were informed of the approaching calamity, and they instandy mande preparations, seluing out poles before their lodge doora, and auaching deer skins to the poles, as marks to eacape the vengeance that was to come upon Aingodon and Nawadaba, and their tribes The next morning at daylight the Aingodons and Nawadahas rose, and seeing the poles and deer skins planted before the doord of the lodges, said in derision, that their friends, the Deer Totems, had, or must have had, bad dreams, thus to set their totems on poles. The Indians of the deer totems romained quiet and silent, and they did not venture out of their lodges. The young girl was nigh the skirls of the wood with ber bost, bordering upon the plain; and just as the sun rose she marched, and as she and her allied forees neared the village of the twin tyrants, it becarne a flame of fire, dearoying all its inhahitants. The Doer Totems escaped. Aingodon and Nawadaha were not consumed. The allied Indinns drew their bows and shot their arrows at them, but they bounded off, and the hlows inflicted upon them were of no avail, until the young girl came up and subdued them, and took them alive, and made them prisoners.

The whole of Aingodon's and Nawadaba's towns and villages were destroyed in the same way; and the land was in passession of the young girl and the six remaining tribes of the Nadowas. After this sigual vengeance was taken the young girl returned with her host, and again oncamped at the head of lake Simcoe, at her former encamping place; aod the two tyrants were asked, what was their object for making chingodam, and what weight could it bave? They asid, in answer, that their implements for war, were war axes, and if permited they would make chingodam, and on doing so they killed each two men. They were bound immediately, and their flesh was cut off from their bodies in slices. One of them was dissected, and upon examination it was discovered that be had no liver, and his heart was small, and composed of hard flint stone. There are marks upon a perpendicular ledge of rocks at the narrows, or head of lake Bimeve, visible to this day, representing two bound persons, who are recognized hy the Iudians of this generation as the two tyrante, or twin brothers, Aingodon and Nawadaha. One of the tyrants pras kept bound, until the time the French discovered and posseased the Canadas, and he was taken to Quebec. After this the young girl was caken away hy the god of light

GEO. JOHNSTON.

## PERSONAL REMINISCENCES.

[CONTINGED MRESHET IH.]
After stopping a day or more at Shawneetown, and reconnoitering its vicinity, I proceeded to the mouth of the Cumberland, and from thence, afier many days detention at that point waiting for a boat, to the mouth of the Ohio. I found thia to be a highly interesting section of the river, from its great expanse and its fine water prospects. The picturesque calcereous cliffe on the west banks, display a novel and attractive line of river ecenery. The Ohio bad, from its commencemenh well sustained the propriety of in ancient appellation of the Beautiful River; but it here assumed something more than besutiful-it was majestic. Let it be borne in mind that thin stream, in the course of some seven or eight hundred miles fow from Pitsburg to Shawneetown, had been swelled on the right and left hand by the Scioto, the Muskingum, the Kentucky, the Miarni, Green River, Wabash, and other rivers of scarcely inferior size. It is sill further augmented, from the lefi bank, with those noble tributaries, the Cumberland and Teonessee, which bring in the gathered drain of the middle rangee of the Alleghanies. It is below Shawneetown, too, that the cliffs of the Cave-in-Rock-Coast present themselves on the west shore-with their associations of the early robber-era which has been commemorated by the pen of fiction of Charles Brockden Brown. These clifs are cavernous, and assume varied forms. They rise in bold elevations, which bear tho. general name of the Knobs, hut which are well worthy of the name of mountains. Distinct from the interest they have hy casting their casle-like shadows, at sunset, in the pure hroad stream, they constitute a kind of Derbyshire in their fine purple spars, and crystalized galena and other mineralogical auractions. I was told that a German of the name of Storch, who pretended to occult knowledge, bad, years before, led money and mineral diggers about these Knohs, and that he was the discoverer of the fine fluates of lime found herc.

One can hardly pass thesc broken eminences, with the knowledge that they tally in their calcareous atrncture and position with the rock formation of the Missouri state border, lying immediately west of them, withoat. regarding them as the apparent monuments of some ancient geological change, which affected a very wide space of country north of their position. A. barrier of this nature, which should link the Tennessee and Mis?
souri coasts, at Grand Tower, would have converted into an inland men the principal area of the present states of Illinois, Indiana, and Southern Obio. The line of separation in this latitude is not great. It constitutes the narrowesa point between the opposing rock formations of the east and west shores, so far as the latter rise through and above the soil.

I was still in a floating Monongahela ark as we approached this coast of cliffs. The day was one of the mildest of the mont of June, and the surface of the water was so still and calm that it presented the appearance of a perfect mirror. Our capain ordered slongside the skiff, which serred as his jolly bont, and directed the men to land me at the Great Cave. In wide and yawning mouth gave expectations, however, which were not realized. It closea rapidly as it is pursued into the rock, and never could have afforded a safe shelter for gangs of robbers whose haunts were known. Tradition states, on this point, that its mouth was formerly closed and hid by trees and foliage, by whicb means the unsuspecting voyagers with their upward freight were waylaid. We overtook the slowly floating ark before it had reached Hurricane Island, and the next land we made was at Smithfield, at the mouth of the Cumberland. While here, several diacharged Tennessee militiamen, or volunteers from the still unfinisbed Indian war in the south, landed on their way tome. They were equipped after the fashion of western hunters, with hunting shirts and rifles, and took a manifest pride in declaring that they had fought under "old Hickory"-a term which has, since that era, become familiar to the civilized world. I here first saw that singular excrescence in the vegetable kingdom called cypress knees. The point of land between the mouth of the Cumberland and Ohio, was a noted locality of the cypress tree. This tree puts up from its roots a blunt cone, of various size and beigbl, which resembles a sugar loaf. It is smooth, and without limb or foliage. An ordinary cone or knee would measure eight inches in diameter, and tbity inches high. It would seem like an abortive effort of the tree to put up another grouth. The paroquet was exceedingly abundant at this pace, along the shores, and in the woods. They told me that this bird rested by hooking its upper mandible to a limb. I made several shooting exeursions into the neighbouring forests, and remember that 1 claimed, in eddition to smaller trophies of these daily rambles, a sbrike and a byestix

At length a keel boat came in from the Illinois Saline, commanded by a Captain Ensminger-an Americo-German-a boid, frank man, very intelligent of things relating to river nasigation. With him I took passage for Bt . Louis, in Missouri, and we were soon under weigh, hy the force of cars, for the mouth of the Ohio. We stopped a short time at a new hamlet on the Illinois shore, which had been laid out by some speculators of Cincinnati, but was remarkable for nothing but its name. I was alled, by a kiod of bathos in nomenclature, "America" I observc 'on
the shoree of the river at this place, a very revent formation of puddingstone, or rather a local stratum of indurated pebblea and clay, in which the cementing ingredient was the oxyde of iron. Chalybeate waters percolated over and amongst this mass. This was the last glimpse of consolidated matter. All below, and indeed far above, was alluvisl, or of recent origin. Nothing could exceed the fertile character of the soil, or its rank vegetation and forest growth, as we approached the point of junction; bat it was a region sabject to periodical overflows, the eras of which were very distinctly marked by tufts and banches of grass, limbs, and ohber floating matter which had been lodged and left in the forks and branches of treen, now fifteen or twenty feet above our heads. It was now the first day of July, and I felt the most intense interest as we approached and carme to tha point of confluence. I had foliowed the Ohio, in all its sinuoeilies, a thousand miles. I had spent more than three months in its beautiful and varied valley; and I bad something of the attachment of an old friend for its noble volume, and did not well like to see it about to be loet in the mighty Mississippi. Broad and ample as it was, however, bringing in the whole congregated drain of the western slopea of the Alleghanies and the isble lands of the Great Lakes, the conteat was soon decided. The stream had, at that season, sunk down to its summer level, and exbibited a transparent blue volume. The Misaissippi, on the contrary, was swelled by the melting snows of the Rocky Mountains, and was in ite vernal flood. Coming in at rather an acute angle, it does not immediately arrest the former, but throws its waters along the Tennensee shores. It runs with prodigions velocity. Its waters are thick, turbid, and replete with mingled and ficasing masses of sand and other comminuted rock and floating vegetacion, trees, and rubbish. For miles the line of separation between the Ohio and Mississippi waters was risible by its colour ; hut long before it reachee the Iron Banks, the modern site of Merophis-che Father of Waters, as it is poetically, not literally, called-had prevailed, and held on its way to make new conquests of the St Francis, the White, the Arkansas, and other noblo streams.

Our captain, although be had no lack of selfconfidence, did not seara to be in haste to grapple with this new foe, by plunging at once into the turbid stream, but determined to try it next morning. This left me, a good part of the day, in a position where there was not mach to reward inquiry. I fished awhile from the boar's side, but was rewarded with noching besides a gar, a kind of sword, or rather billed fish, which appears to be provided with tbis appendage to stir up its food or prey from a muddy bottom. Ite scales and skin are nearly as hard and compact as a abark'a, and its flesb is equally valueless. It is at this point that the town of Cairo has aince been located. There were, at the period mentioned, several arke and flat-boats lying on the higher banks, where they had been moored in high water. These now served as dwallings, and by cuting doon in
their sides they formed rude groceries and provision stores. Whatever alse, however, was to be seen at so low and nascent a point, the mosquito, as night came on, soon convinced us that he was the trie magnate of those dominions.

The next morning at an early hour our stout-hearted commander put bis boatmen in motion, and turned his keel into the torrent; but such was the velocity of the water, and its opacity and thick turbidness, that I thought we should have been precipitated down stream, and burled againat sunken logs. Those who have ascended this stream in the modern era of stearaboats, know nothing of these difficuities. It seemed impostible to stern the current. A new mode of navigation, to me at least, was to be tried, and it was evidently one which the best practised and stoutest-hearted men hy no means relished. These boats are furnished with a plank walk on each side, on which slats are nailed to give a foothold to the men. Each man has a pole of asb wood aboat 16 feat long, with a wooden knoh at the head to reat against the shoulder, and a blunt point at the other end abod with iron. Planting these upon the bottom near shore, with their heads facing down stream, the men bend all their force upon them, pro--pelling the boat by their feet in the contrary direction. This is a very Laborious and slow mode of ascent, which has now been entirely suporseded on the main rivers hy the use of oteam.

Such is the fury and velocity of the current, that it threatens at every freshet to tear down and hurst asunder its banks, and run lawless through the country. Onten whole islands are swept away in a short time. We had an inotance of this one night, when the island against which we were moored, began to tumble into the channel, threatening to overwhelm us by the falling earth and the recoil of the waves, and we got away to the main shore with much effort, for night was set in, the current farious, and the abore to which we were going entirely unknown. To have struck a anken $\log$ on such a traverse, nnder such circumstances, must have been fatal. We got at length upon a firm shore, where we moored and turaed in at a late hour; but a curious cause of alarm again roused us. Some mimal had made its appearance on the margin of the strearn, not far below en, which in the dimness of the night appeared to be a bear. All who hed arme, got them, and there was quite a hustle and no litte excitement mong the cabin passengers. The most knowing pronounced it to be a white bear. It prodaced a enorting sound resembling it. It seemed furious. Both white and furious it certainly was, hut after much delay, conrmeadable caution, and no want of the display of courage, it turoed out to be a large wounded hog, which had been shot in the snout and head, and came to allay its fevered and festered flesh, by night, in the waters of the Mississippi.

To stam the current along this portion of the river required almost saparhuman power. Often not more than a few miles can be made with
a hard day's exertions. We went the firs day six miles, the second aboat she same distance, and the third eight miles, which brought us to the firat cultivated land along a low district of the west shore, called the Tyewapery Botom. There were sir or eight small farms at this spot; the land rich, and said to be quite well adapted for corn, flax, bemp, and tobacco. I obeerved here the papar. The next day we ascended but three miles and vtopped, the crew being found too weak to proceed. While moored to the bank, we werc passed by several boats destined for St. Loujs, which were loaded with pine boards end plank from Olean, on the sonrcee of the Alleghany. They told us that sinty dollars per thousand feet could be obtained for them.

Additional men having been bired, we went forward the next day to a point which is called the Litlle Chain of Rocks, where, from sickness in some of the bands, another balt became necessary. It is at this point that the firm cherty clay, or diluvial soil of the Missouri shore, first presents itself on the banks of the river. This soil is of a sterile and mineral character. I noticed beneath the first elevated point of it, near the river's edge, a locality of white compact earth, which is called chalk, and is actually used as such by mechanics. On giving a specimen of it, after my retam to New York in 1819, to Mr. John Griscom, he found it completely destitute of carbonic acid ; it appears to be a condition of alumine or nearly pure clay. Large masses of puddingtone, disropted from their original position, were seen lying along the shore at this locality, being similar in their choracter to that seen on approaching the mouth of the Ohio.

We ascended the river this day ten miles, and the nemt five miles, which brought as to Cape Girardeau, at the estimated distance of fifty milea above the moutb of the Ohio. At this place I was received with attention by one of the principal residents, who, on learning that my object was to examine the natural history of the country, invited me to his bouse. In rambling the vicinity, they showed me a somewhat extra but dilapidated and desarted house, which had been built by one Loramee, a Spanish trader, who has left his name on one of the branches of the river St. Mary's of Indiana. This old fabric excited a strong interest in my mind as I walked through its open doors and deserted roome, by a popular atory, how trae I know not, that the occupant had bean both a rapacious and cruel man, eiding with the Indians in the bostilites against our western people; and that he had, on one occagion, taken a female caplive, and with his own hands cut off her breasts.

The journey from Cape Girardeau to SL Lonis oceupied nineteen days, and was fraught with scenes and incidents of interest, which I abould detail with pleasure were it compatible with my limits. Indeed, every day's royage along this varied and picturesque ahore presented objects of remarle, which both commended themselves to my taste, and which the slow mode of ascent gave me foll meane to improve. This might be sid particalarity
of its geological atructure and its mineralogical productiong-chemes whict were then freat and new, but which have loat much of their atractions by the progress which natural science has made in the country during dix and twenty years. To these topics it is the less necessary to revert, as they were embraced in the results of my tour, given in my " View of tha Mines," published in 1819.

The aricle improperly called pumice, which floats down the Missony during its floods, from the burning coal banks in the Black Hills, I fires picked up on the shore in the ascent abore Cape Girardeau, and it gave me an intimation that the waters had commenced falling. We came to the same night, at a well known fountain, called tbe Moccasin Spring, a copious and fine spring of erystal water, which issues from an elongated orifice in the limestone rock.

While lying at the mouth of the river Obrazo, where we were detained on account of hands, several boats touched at the place, carrying emigrants from Vermont and New York, whose destination was the most westerly settlements on the Missouri At higher points in the ascent we encountered emigrants from Maine, Connecticut, Penasylvania, North Carolina, and Kentucky, which denotes the wide range of the spirit of migration at the era. The ends of the Union seemed to be brought together by this general movement towards the west. It was not uncommon to find representalives from a great number of the states in these accidental meetings; they were always of a social and highly friendly character, and the effect of sach a system of intercommunication and residence, from districts widely separated, could not but be highly auspicious in promoting uniformity of manners and opinions, and assimilating customs, dress, and language If long continued it must destroy provincialisms, and do much to annihilate local prejudices.

Every one who has ascended this aream will recollect the isolated cliff, tanding in its waters, called Grand Tower, with the corresponding developments of the coast on the conliguous shores, which tell the traveller plainly enough that here is the site of some ancient diaruptive process in the physical history of the valley. The carrent has an increased velociry in sweeping around this obetacle; and we found, as the waters fell, that there were numerous eddies and strong jets or currents along this precipitous coast, which it required extra force to surmonnt. We saw one day a number of pelicans standing on a sand bar. The wild turkey and quail were daily encountered on shore.

Our approach to St. Genevieve was preceded by a sight of one of those characteristic fealures in all the early French setllements in this quarterthe grest public field extending several miles, five miles I think, along the banks of the river. St. Genevieve itself lies about a mile from the river, and is concealed by irregularities in the surface It is a highly characLeristic ancique Franch town, and reminds one strongly of the atvle and
manner of building of the provincial villages and towns of the parant country, as atill existing. Three miles above this place we came to a noted point of crossing called the Litle Rock Ferry; a spot worthy of note at that time as the residence of a very aged Frenchman, called Le Bretorn Statements which are beliered to be true, male him 109 years old. From his own account he was at the seige of Bergen-op-zoom, in Flanders; at the seige of Louisburg; at the building of Fort Chartres, in Illinois; and at Braddock's defeat After his discharge, he discovered those extensive lead mines in Washington county, about forty miles west of the river, which still bear his name.

The coast between SL. Genevieve and Herculaneum is almost one continuous cliff of precipious rocks, which are broken through chiefly at the points where rivers and streams discharge. Herculaneum itseif is seated on one of these limited areas, hemmed in by cliff, which, in this case, were rendered still more picturesque by their eleated shot towers. I lended at this place about noon of my twenlysecond day's ascent, and finding it a convenient avenue to the mine district, determined to leave my baggage at a hotel till my return from St. Louis, and pursue the rest of the journey to that place on foot It was at this point that I was introduced to Mr. Austin, the elder, who warmly approved my plan of exploring the mines, and offered every facility in his power to further it. Mr. Austin was, he informed me at a subsequent stage of our acquaintance, a native of Connecticut. He had gone early into Virginia and seuted at Richmond, where bis eldeast son was bora, and afterwards removed to Wythe county. In 1778 he went into Upper Louisiana, enduring severe aufferings and the rist of life, in crossing the country by way of Vinceanes to St Louis, where he was well received by the Spanieh local governor. He obtained a grant of land in the present area of Washington county, the priacipal seat of the older mines. About the time I weot to Missouri, or soon after iu, he resolved to vieit San Antonio, in Teras, with a view of introducing a colony of Americans into that quarter. This plan be carried into execution, I think, in 1820, and returned with an ample grunt; but he did not live to carry its stipulations into effect, having died suddenly after his return, at the house of his daughter, Mrs. Bryaot, at Hazel Run.

Mr. Austin was a man of great zeal and fervour of imagination, and entered very warmly into all his plans and views, whatever they were. He was hospitable, frank, intelligent, and it is with feelings of unmixed pleasure, that I revert to my acquaintance with him, no lese than with his calented son, Stephen, and the excellent, beniga, and Lady-like Mrs. Austin, and ocher members of this intelligent family.

## HIST0RY.

## A SYNOPSIS OF CARTIER'S VOYAOES OF DISCOVERY TO NORTH AMERICA.

## second voyage.

A. D. 1535, May, 19th, Cartier left SL. Malo, on his second voyage of discovery, "to the islands of Canada, Hochelaga, and Saguenay," with three ahips-lbe "Hermina" of 100 to 120 tons-she "little Hermina" of 60 tons, and the "Hermerillon" of 40 tons, commanded by separato masters, acting under his orders as "General." He was accompanied by several gentlemen and adventurers, among whom the narrator of the voyage mentions, "Master Claudius de Pont Briand, san to the Lord of Montceuell, and cup-bearer to the Dauphin of France; Charles of Pomerais, and John Powlet" He suffered a severe gale on the outward pessage, in which the ships parted company. Cartier reached the coest of Newfoundland on the 7th July, and was not rejoined hy the other vea sela till the 26 h , on which day the misaing vessels entered "the port of White Sands" in the bay des Chastenux, the place prepiously deaignated for their general rendezvous.
: On the 27th he continued his voyage along the coast, keeping in sight of land, and consequently running great risks, from the numeroan shoals he encountered in seeking out anchorages. Many of the islands and hearlands named in the previous voyage, were observed, and namea were bertowed upon others, which had before eacaped notice. Soundings and courses and dietances, are detailed with the tedious prolixity, and probably, with the uncertainty of the era. Nothing of importance occarro until the Bth of August, when Cartier entered the gulf, where he had previously encountered such storms, and which he now named 8 r. Law aenog. From thence on the 12 h , he pursued his voyage westward "about 25 leagues" to a cape named "Assumption," which appears to have been part of the Nova Scotia coast It is quite evident that the idea of a continuous conlinent was not entertained by Cartier at this period, although the Cabots had discovered and run down the coost nearly 40 yeara before. (1497.) He conssantly speaks of his discoverieas as "inlandr"
and the great object of anxiety seerns to have been, to find the long sought "passage" so often mentioned in his journals.

The two natives whom he had seized on the previous voyage, now told him, that cape Assumption was a part of the "southern coast," or main, That there was an island north of the passage to "Honguedo" where they had been taken the year before, and that "two days journey from the said cape, and island, began the kingdom of Saguenay."

In consequence of this information, and a wish to revisit "the land he had before espied," Cartier turned his course towards the noth, and reedtering the Gulf of St. Lawrence, came to the entrance of the river, which is stated to be "about thity leagues" across. Here, the two natives told him, was the commencement of "Saguenay,"-that it was an inhabited country, and produced "red copper." They further informed him, that this was the mouth of the "great river of Hochelagn, and ready way to Canada,"-that it narrowed in the ascent towards Canada, the waters becoming fresh; that its sources were so remote that they bad never heard of any man who had visited thein, and that boats would be required to complete the ascent.

This information appears to have operated as a disappointment on Cartier, and he determined to explore nothward from the gulf, "because he would know" to use the quaint langaage of the narrator, "if between the lands towards the north any passage might be discovered." No such passage could however be found, and after devoling ten or tweive days to re-eraminations of points and islands before but imperfectly discovered, or to the discovery of others, he returned to the river St. Lawrence, which be began to ascend: and on the 1at Sept. he came to the entrance of the Saguenay river, which is described as a bold and deep stream, entering the St. Lawrence, between bare, precipitous rocks, crowned with trees Here they encountered four canoes of Indians, who evinced their characteristic caution and shyness. On being hailed, however, by the two captive natives, who disclosed to them, their names, they came along side. But the journal recorde no further particulars of this interview. They proceeded up the river next day. The tides are noticed as being "very swift and dangerous," and the "current" is described as equalling that at Bordeaux. Many tortoisea were seen at the "Isle of Condres," and a species of fish, which are described of equalling a porpoise in size, with a head resembling a greyhound's, and of unspotted whiteness. It may be vague to offer a conjecture from such a description as to the species of fish intended, but as the natives reported them to be "very savoury and good to be eaton," it may be inferred, that the sturgeon was meant. Many of the descriptions of the animal productions of America, given by Cartier, appear to be drawn up, rather with a riew to excite wonder, in an age when wonders were both industriously sought, and readily credited, than to convey any accurate idea of thair true characters and properties.

On the 7th of Sept they reached the island now called Orleans, where, it is said "the country of Canada beginneth." This island is stated to be ton leagues long, and five broad, being inbabited by natives who lived excluaively by fishing. Having anchored his veasels in the channel, ho made a formal landing in his boats, taking the two captives, Domaigaia, and Taiguoagny, as interpreters. The natives at first fled, but hearing themselves addressed in their own tongue, and finding the captives to be their own countrymen, friendly intercourse at once ensued. The natives evinced their joy by dancing, and "showing many sorts of ceremonies." They presented Cartier, "eels and other sorts of fishes, with two or three burdens of great millet, wherewith they make their bread, and many great mush mellons." This "great millet" appears to have been zea mais, which is here for the first time noticed, amongst the norhern Indians. The report of the arrival of their lost countrymen $\mathbf{D}$. and $\mathbf{T}$. seemed to have put all the surrounding villages in commotion, and Cartier found himself thronged with visitors, to whom he gave presents, trifling in themselves, but of much value in the eyes of the Indians. The utmore harmony and good feeling appear to have prevailed.

On the following day Donnacona, who is courteously styled the Lord of Agouhanna, visited the ships, with 12 boats, or canoes-ten of which however, he directed to stay at a distance, and with the other two and 16 men approached the vessels. A friendly conference ensued. The chief, when he drew near the headmost vessel began "to frame a long oration, moving all his body and members after a strange fashion." When he reached Carier's ship, the captives entered into free discourse with him, imparting the observations they had made in France, and the kind treatment they had experienced. At this recital Donnacona was so much pleased, that he desired Cartier to reach him his arm, that he might kiss it. He not only kissed it, but "lsid it about his neck, for so they use to do, when they will make much of one." Cartier then entered into the chief's boat, "causing bread and wine to be brought," and after eating and drinking with him and his followers, the interview temmated in mutual satisfaction.

The advanced state of the season, and the determination to visit Hochelaga (now Montreal) before the ice formed, admonished Cartier to look for a harbour, which would afford a safe anchorage for his largest vessels during the winter. He selected "a litle river and haven," opposite the head of the island, to which he gave the name of "Santa Croix," being in the vicinity of Donnacona's village. No time was lost in briaging up and mooring the vessels, and driving piles into the harbour for their better security. While engaged in this work, further acquaintance was inade with the natives, and their opinion of Cartier's visit, began to manifest itself, hy which it appeared, that the friendship established with him was rather apparent, than real About this time Taignoagny and

Domaigaia were suffered to return to their villages, and it soon became apparent, that the knowledge they had acquired of the French, would be wielded to put their countrymen on their guard against encroachments upon their soil. Taignoagny, in particular, rendered bimself obnoxious to the French, by bis sullen and altered conduct, and the activity he afterwards manifested in thwarting Cartier's design of visiting the island of Hochelaga, although it appears, he had, previous to leaving the vessels, promised to serve as a guide on the expedition.

Donnacona himself opposed the projected visit, hy argument, by artifice, and finally, by the extraordinary resource of human gifis. His aversion to it first evinced itself by keeping aloof, and adopting a shy and suspicious demeanour. Cartier finding this chief, with T. and D. and a numerous retinue in his vicinity, "under a point or nook of land," ordered a part of his men to follow him, and suddenly presented himself in the midst of them. After mutual salutations, Taignoagny got ap and addressed him, in behalf of Donnacona, complaining that they came armed, to which Cartier replied that, it was the custom of bis country, and a custom he could not dispense with. The hustle and heat of the introduction being over, Cartier played the part of a politic diplomatist, and was met by Donnacona and his counsellors on his own grounds, and the whole interview, though it resulted in what is called "a marvellous steadfast league of friendship" can only be looked upon, as a strife, in which it is the object of both parties to observe the most profound dissimulation. This "league" was ratified by the natives, with three loud cries, "a most horrihle thing to hear" says the narrator.

On the very next day Donnacona, attended with T. and D. and 10 or 12 " of the chiefest of the country, with more than 500 persons, men, women and children," came on board of the vesselh, at their moorings, to protest against the intended voyage of exploration. Taignoagny opened the conference, hy saying to Cartier, that Donnacona regretted his design of visiting Hochelaga, and had forbid any of his people from accompanying bird, because the river itself "was of no importance." Cartier replied that his derision was made, and urged the speaker to go with him, as he had promised, offering to make the voyage every way advantageous to him. A prompt refusal, on the part of T. and the sudden withdrawal of the whole collected multitude, terminated this interview.

On the wext day Donnacona re-appeared with all his followers, hringing presents of fish, singing and dancing. He then caused all his people to pass to one side, and drawing a circle in the sand, requested Cartier and his followers, to enter into it. This arrangement concluded, he began an address, "holding in one of his hands a maiden child ten or twelve ycars old," whom he presented to Cartier, the multitude at the same time giving three shouts. He then hrought forward two male children, separately, presenting them in the kame manner, and this people
st each presentation, expressing their assent by shouts. Taiguoagay, who by this time had drawn upon himself the epithet of "crafty knave" told the "captain" (as Cartier is all along termed,) that one of the children was his own brother, and that the girl wes a daughter of Donnacona's "own sister," and that this presentation, was made to him, solely with a view of dissuading him from bis expedition. Cartier persisted in saying, that his mind was made up, and could not be altered. Here, Domaigaia interposed, and said, that the children were offered as "a sign and token of good will and security," and not with any spocific purpose of dissuading him from the expedition. High words passed between the two liberated captives, from which it was evident that one, or the other, had either misconceived or misrepresented the ohject of the gift. Cartier however, took the children, and gave Donnacona "two swords and two copper basins," for which he returned thanks, and "commanded all his people to sing and dance," and requested the captain to cause a piece of artillery to be discharged for his gratification. Cartier readily improved this hint, to show them the destructive effects of European artillery, and at a signal, ordered twelve pieces, charged with ball, to be fired into the contiguous forest, by which they were so astounded that they "put themselves to flight, howling, crying, and shrieking, so that it seemed hell was broke loose."

These attempts to frustrato the purposed voyage, having failed, the natives endeavoured to put the captain's credulity to the test, and operate upon his fears. For this purpose three natives were disguised to play the part of "devils," wrapped in skins, besmeared, and provided with horns. Thus equipped they took advantage of the tide, to drop down along side Cartier's vessels, utering words of unintelligible import as they passed, but keeping their faces steadfartly directed toward the wood. At the same time Donnacona, and his people rusbed out of the wood to the shore,--attracting the attention of the ships' crews in various ways, and finally seized the mock "devils" at the moment of their landing, and carried them into the woods, where their revelations were uttered.

The result of this clumsy trick, was announced by Taignoagny and Domaigaia, who said, that their god "Cudruaigny had spoken in Hoche$\operatorname{logn}{ }^{n}$-insporting ill tidings to the French, and that he had sent these three men to inform them that, there was so mucb ice and snow in the country, that whoever entered it, must die. After some interrogatives pro and con, in the course of which the power of "his Priests" was oddly contrasted by the French commander with that of the "devils," both Taignoagny and Domaigaia coincided in finally declaring that Donnaconc, "would by no means permit that any of them should go with him to Hochelaga," unless he would leave hostages in bis hands.

All these artifices appear to have had but little effect on Cartier's plan. He cold his freed interpreters, that if they would not go willingly, they
might stay, and be would prosecute the voyage withont them. Accordingly, having finiehed mooring his vessels, on the 19th September he eat out to explore the upper portions of the tiver, tuking his smallest vessel and two boats with fifty mariners, and the supernumerary gendemen of his party. A voyage of ten days brought him to an expansion of the river, which he named the lake of Angolesme, but which is now known under the name of St. Peter. Here the shailowness of the water, and repidity of the current above, induced him to leave the "Hermerillon," and he proceeded with the two boats and twenty eight armed men. The fertility of the shore, the beauty and luxuriance of the forest trees, manded as they often were, with the vine loaded with clusters of grapes, the variety of water fowl, and above all the friendly treatment they every where received from the Indians, excited unmingled admiration. One of the chiefs whom they encountered presented Cartier with two children, his son and daughter, the latter of whom, being 7 or 8 years old, he accepted, On another occasion he was carried ashore by one of a party of hunters, as "lighly and easily as if he had been a child of five years old." Presents of fish were made, at every point, where he came in contact with the natives, who seemed to vie with each other in acts of hospitality.

These marks of welcome and respect continued to be manifested during the remainder of the journey to Hochelaga, where he arrived on the $2 d$ of October. A multitude of both sexes and all ages had collected on the shore to witness his approach, and welcome his arrival They espressed their joy by dancing, "elustering about us, making much of us, briuging their young children in their arms only to have our captain and his company touch them." Cartier landed, and spent half an hour in receiving their caresses, and distributed tin beads to the women, and knives to some of the men, and then "retured to the boats to supper." The natives built large fires on the beach, and continued dancing, and merry making all night, frequently exclaining Aguiaze, which is said to signify "mirth and safety."

Early the next morning Cartier having "very gorgeously attired himself," and taking 20 mariners, with his officers and supernumeraries, landed for the purpose of visiting the town, taking some of the natives for guides. After following a well beaten path, leading throagh an oak forest, for four or five miles, he was met hy a chief, accompanied by a roLinue, sent out to meet him, who by signs gave him to understand, that be was desired to rest at that spot, where a fire had been kindled, a piece of civility, which it may be supposed, was something more than an empty compliment on an October morning. The chief here made "a long discourse," which, of course, was not understood, but they inferred it was expressive of "mirth and friendship." In return Cartier gave him 2 hetchets, 2 knives and a cross, which he made him kiss, and then put it around his neck.

This done the procession advanced, without further interruption, to the "city of Hochelaga," which is described as seated in the midst of culdivated fields, at the distance of a league from the mountain. It was secured by three ramparts "one within another," about 2 rods in beight, "cunningly joined together after their fashion," with a single gate "shat with pites and stakes and bars." This entrance, and other parts of the wallh, had platforms above, provided with stones for defensive operationa The ascent to these platiortas was by ladders.

As the French approached, great numbers came out to meet them They were conducted by the guides, to a large square enclosure in the centre of the town, "being from side to side a good atone's cast." They were first greeted by the female part of the population, who brought their children in their arms, and rushed eagerly to touch or rub the faces and arms of the strangers, or whatever parts of their bodies they could approach. The men now caused the fermales to retire, and seated themseives formally in circles upon the ground; as if, saya tho narrator, "some comedy or show" was about to be rebearsed. Mats were then brought in by the women, and spread upon the ground, for the visitore to sit upon Last came the "Lord and King" Agouhanna, a palsied old man, borne upon the shoulders of 9 or 10 attendants, sitting on a "great stag skin." They placed bim near the mats occupied by Cartier and his party. This simple potentate "was no whit better apparelled than any of the rest, only excepted, that he had a certain thing made of the skins of bedgehogs, like a red wreath, and that was instead of bis crown."
After a salutation, in which gesticulation awkwardly supplied the place of language, the old chief exhibited bis palsied limbs, for the purpose of being touched, by the supposed celestial visitante. Cartier, although be appeared to be a man of sense and decision, on other occasions, was not proof against the bomage to his imputed divinity; hut quite seriously fell to rubbing the credulous chief's legs and arms. For this act, the chief presonted him his fretful "crown." The blind, lame, and impotent, of the town were now brought in, and laid before him, "some so old that the hair of their eyelids came down and covered their cheeks," all of whom he touched, manifesting his own seriousness by reading the Gospel of S. John, and "praying to God that it would please him to open the hearts of this poor people, and to make them know his holy word, and that they might receive baptism and christendom." He then read a portion of the catholic service, with a loud voice, during which the natives were " marvellously attentive, looking up to heaven and imitating us in gestures." Some presents of cutlery and trinkets were then distributed, trumpers sounded, and the party prepared to return to their boats. When about to leave their place, the women interposed, inviting them to parake of the victuals they had prepared -a compliment which was declined, "because the meals had no savour at all of salt" They were followed
out of the hown by "divers men and women," who conducted the whale party to the top of the mountain, commending a wide prospect of the plain, the river and its iatands, and the distant mountains. Transpored with a scene, which has continued to efford delight to the visitors of all after timen, Cartier bestowed the name of "Mount Royal" upon this eminencename which has descended, with some modificalions, to the modern cify. Having satisfied their curiosity, and obtained such information respecing the adjoining regions, as their imperfect knowledge of the Indian language would permit, they returned to their boate, accompanied by a promiscuous throng of the natives.

Thus ended, on the 3rd Oct. 1535, the firm formal meeting between the French and the Indians of the interior of Canada, or what now began to be denominated Neto France. As respects those incidents in it, in which the Indians are represented as looking upon Cartier in the light of a divinity, clothed with power to heal the sick and restore sight to the blind, every oue will yield the degree of faith, which his credulity permits The whole proceeding bears so striking a resemblance to "Christ heat ing the sick," that it is probable the narrator drew more largely upon his New Testament, tban any certain knowledge of the faith and telief of a savage people whose traditions do not reach far, and whose language, granting the mast, he but imperfectly understood. As respects the description of a city with triple walls, those who know the manner in which our Indian villagee are built, will be best enabled to judge how far the narrator supplied by fancy, what was wanting in fact A "walled city" was somewhere expected to be found, and the writer found no better place to locate it Cartier no sooner reached his boats, than he hoisted sail and began his descent, moch to the disappointment of the Indians. Favoured by the wind and tide, he rejoined his "Pinnace" on the following day. Finding all well, he continued the descent, without meeling much ontitled to notice, and reached the "por of the Holy Cross," on the 1 th of the month. During his absence the shipg' crews had erected a breastwork before the vessels, and mounted several pieces of ships' cannon for their defence. Donnacona renewed his acquaintance on the following day, attended by Taignongny, Domaiga, and others, who were treated with an appearance of friendship, which it could hardly be expected Cartier could sincercly feel. He, in retnrm visited their village of Stadacona, and friendly relations being thus retored, the French prepared for the approach of winter.

Winter came in all is severity. From the middle of Nov. to the middle of March, the vessels were environed with ice "two fathoms thick," and snow upwards of four feet deep, reaching above the sides of the vessels. And the weather is represented as being "estremely raw and bitter." In the mides of this severity, the crews were infected with "a atrange and cruel disease," the natural consequence of a too licention
intercourse with the natives. The virulence of this disorder exceeded any thing that they had before witnessed, though it is manifesh from the journal, that it was in its virulence only, that the disease itself presented any new features. A complete prostration of strength marked its commencement, the legs swelled, the "sinews shrunk as black as any coal." The infection became general, and excited the greatest alarm. Not more than 10 persons out of 110 were in a condition to aford asaistance to the sick by the middle of February. Eight had already died, and 50 were supposed to be past recovery.

Cartier, to prevent his weakness being known, as well as to stop further infecion, interdicted all intercourse with the natives. He caused that "every one should devoutly prepare himself by prayer, and in remembrance of Christ, caused his image to be set upon a tree, about a fight ahot from the fort amid the ice and saow, giving all men to understand that on the Sunday following, sexvice should be said there, and that whosoever could go, sick or whole, should go thither in procession, singing the seven psalms of David, and other Litanies, praying, \&c."

The disorder, however, continued to spread cill there wero not "above three sound men in the ships, and none was able to go under batches to draw drink for himself, nor for bis fellows." Sometimes they were constrained to bury the dead under the snow, owing to their weakneam and the severity of the frost, which rendered it an almost incredible labour to penetrate the ground. Every arifice was resorted to by Cartier, to keep the true slate of his erews from the Irdians, and be sought unremittingly for a remedy against the disorder.

In this his efforls were at last crowned with success, but not till he had loet 25 of his men. By using a decoction of the bark and leaves of a cerbin tree, which is stated to be "the Sassafras tree," the remainder of bis crews were completely recovered. The decoction was drank freely, and the dregs applied externolly, agreeably to the directions of Domaigaia, to whom he wes indebted for the information, and who caused women to bring branches of it, and "therewithal shewed the way how to use it"

The other incidents of the winter were not of a character to require notice. Mutual distrust existed. Cartier was in constant apprehension of some stratagem, which the characler and movements of his sapage neighbours gave some grounds for. He was detained at the bay of the Holy Cross till the 6th May, 1536. The narrator takes the opportunity of this long season of inaction to give descriptions of the manners and cugtoms, ceremonies and occupations of the Indians, and to detril the information derived from them, and from personal observations respecting the geographical features and the productions of the country.

[^23]Touching the faith of the Indians, it is said, they believed no whit in God, but in one whom they call Cudruiagni," to whom, they say, they are often indebted for a foreknowiedge of the weather. And when he is angry, his displeasure is manifested by casting dust in their eyes. They believe that, after deatb, they go into the stars, descending by degrees towards the horizon, and are finally received into certain green field, sbounding in fruiss and flowers.

They are represented as possessing all property in common, and aa heing "indifferently well stored" with the useful "commodities" of the country-clothing themselves imperfectly in skins, wearing hose and shoes of skins in winter, and going barefooted in summer. The men labour little, and are much addicted to smoking. The condition of the women is one of drudgery and servitude. On them the labour of tilling the grounde, \&c., principally devolves. The young women live a dissolute life, until marriage, and married women, after the death of their busbands, are condemned to a state of perpetual widowhood. Polygamy is tolerated. Both sexes are represented as very hardy, and capable of enduring the most intense degree of cold. In this there is little to distinguish the native of 1536 from that of the present day, if we substitute the blanket for the mulatos, and except the remark respecting the condition of widows, the accuracy of which, as it was made upon slight acquaintance, may be reasonably doubted It may also be remarked, that the condition of young wonen, as described by Carier, was more degraded and vitinted than it is now known to be among any of the North American tribes.

The geographical information recorded respecting the St Lawrence and is tributaries is generally vague and confused. But may be referred to as containing the first notice published by the French of the Great Lakes. Cartier was told hy Donnacona and others that the river originated so firr in the interior, that "there was never man heard of that found out the end thereof," that it passed through "two or three great lakes," and that there is "a sea of fresh water," alluding, probably, to Superior.

At what time the ice hroke up, is not distinctly told. It is stated that "that year the winter was very long," and a scarcity of food was felt among the Indians, so much so, that they put a high price npon their venison, Acc., and somelimes took it back to their camps, rather than part with it "any thing cheap." Donnacona and many of his people wihdrew themselves to their hunting grounde, under a pretence of being absent a fortnight, but were absent two months. Cartier attrihuted this long absence to a design of raising the country, and attacking him in his fortified positions-a design which no cordiality of friendship on the part of D. would prevent bis entertaining, and which the latter gave some colour to

[^24]by neglecting to visit Cartier on his return with great numbers of nativeo not before seen, and by evading the attempts made to renew an intercourse, by feigning sickness as the cause of his neglect. Cartier felt his own weakness, from the death of so many of his crew and the sickness of olhers, and has recorded for his government on this occasion the proverb, that "he that takee heed and shields himself from all men, may bope to escape from some." He determined to abendon one of his vessels, that he might completely man and refit the othera, and appears to have been diligent in making early preparations to return. While thus engaged, Donnacona (April 22,) appeared with a great number of men at Sladacona, and John Powlet, "who being best believed of those people," he sent to reconnoitre them in their principal villages, reported that he saw so many people, that "one could not atir for another, and such men as they were never wont to ese." Taignoagny, whom he saw on this occasion, requested him to beeeech Cartier to take of "a lord of the country," called Agonna, who probably stood in the way of bis own advancement. Cartier availed bimself of this request to bring on an interview with Taignoagny, and by flattoring his hopes, finally succeedod in the execution of a project he appears to have previously entertained. This was nothing less than the seizure of Donnacona, Taignoagny, Domaigaia, (his previous captives,) and "two more of the chiefest men," whom, with the children before received, making ten persons in all, he conveyed to France.

This seizure was made on the 3d of May, being "Holyrood day," et a time when Cartier had completed his preparations for sailing. He took formal possession of the country, under the name of New France, by erecting a cross "thinty-five feet in height" bearing a shield with the arms of France, and the following inseription:

> "Franciseus priroum dei gratia Francorum fex regnat,"
a sentence upon which this unjustifiable outrage formed a practical comment Three days afterwards he sailed from the port of the Holy Croses, leaving crowds of the natives to bewail the loes of their chiefs. And whose kindness led them to send on baard a supply of provisions, when they found they could not effect their liberation. Finding the current of the St Lawrence much swoln, he came to onchor at the isle of Filberds, near the entrance of the Sagnenay, where be was detained nine days. In the meantime many of the natives of Sagnenay visited the shipe, and find ing Donnacone a prisoner, they presented him three packs of beaver. Or the 17h May, he made an ungucceasful allempt to proceed, but was forced back and detained four days longer, waiting "till the fierceness of the wa ters" were past. He entered and passed out of the gulph on the 21sh, hul encountering adverse winds, did not take his final departure from the Newfoundland coast ill the 19th June. He thea took advantage of a favorable
wind, and performed the homoward voyage in 17 days. He entered the por of St. Malo, July 6, 1536, daving been absent less than 14 months, 8 of which had been passed in the St. Lawrence.

It is to be remarked, on this voyage, that the names of persons introduced, and the aboriginal terms employed, are exclusively of the Iroquois type.

> (To be continued)

To preserve order in the lodge, each person is assigned a fixed seat, or place to sit. This is called Abinos. It would be a gross impropriety for one inmate of the lodge to take the abinos of the other. The hustand's, the wife's, the son's, and the daughter's abinos may not be invaded without a violation of good manners. It is only children who need not observe this rule.

Woman was created for the domicil, and not for the forest. It is her change and transference from this scene to woods and wilds, that has caused her degradation there. It is indispensable to feminine development, independence, and exaltation, that she should have allotted to ber aparments shielded from the family gaze and intrusion, which it is impossible to secure in the wigwam. Ablution is the parent of parity.

Worman is a modest and tender flower, which for its proper growth and the development of all its beauties and fragrance, must be cuitivated in the garden. If planted beneath the dark shades of the forest, it will become aickly, pale, and lose its sweetness.

Can a rose tree bave health and beauty, which is often plucked up and removed from spot to spot, without regard to air, sunshine, or water 3 Neither can a mother of a family, if compelided to follow the fortunes of the cbase. There is a perpetual attempt made to secure a state of domestic fixity, which is perpetually disturbed, recommenced, and rediaturbed.

A wild flower is often a pretty flower, but it is subject to be trodden down by the bear or panther's paw. Thus it is with the maid of the forest.

All children are lovely while they are children. A baby swung in a uickenagon, or rocked in a cradle, is equally the ready subject of early impressions, and may be moulded either to habis of civilization or barbarismin It is education that makes the difference.

To conceal emotion is a point every chieftain wishes to carry. The mereet children are taunted if they flinch.

# ETHNOLOGY. 

## (contanued from no. in.)

Aloonac, a village of the county of St. Clair, Michigan, which is pleasanly situated on the banks of the river St. Clair. It is a term de rived from the word Algonquin, and akee, earth or land.

Aloonquinensis, a term used in old gazetteers and geographical die tionaries, for the Algonquins.

Aletans, a name for the Shoshones, or Snake Indians. See Ietans
Adibasong, or Alibamis, ancient forms of orthography for the tribe of the Alabemas.

Alva, a settement of Pinzandarc, New Spain, containigg 20 Indian families, who have a commerce in maize and wax.

Alfpionck, an Indian village which, in 1659, stood on the eart banke of the river Hudson, between the influx of the Croton, then callod by the Dutch Saehkill, and the Indian village of Sing Sing. [Osinsing.] Aneebikong? place of leaves, or rich foliage.

Allca, an ancient province of the kingdorn of Peru, south of Cuczo, inhabited by a race of natives, who made a vigorous stand againet Maneo Capac, the fount emperor of the Incas, and called the conqueror. In this defence, they were favoured by the rugged character of the coantry, which abounds in woods, mountains, lakes, and gold and silver mioes

Allegan, an agricultural and milling county of the state of Michigan, bordering on the east shores of lake Michigan. It is a derivative word, from Algonkin, and gan the penultimate syllable of the Odjibwa term Sa-gi-\&-gan, a lake.

Alleghany, the leading chain of mountains of the United States east of the Mississippi, also one of the two principal sources of the Ohio river. Indian tradition attributes the origin of this anme to an ancient race of Indians who were called Tallegewy, or Allegewy. This nation, tradition asserts, had spread themselves east of the Mississippi and of the Ohio. They were a warlike people, and defended themselves in long and bloody ware, but were overpowered and driven south by a confederacy of tribes, whose descendants sill exist in the Algonquin and Iroqusia stocks. Such is the account of the Delamares.

Aymolous, a setulement of Zulsepec in New Spain, of 77 Indian faroilien; almo, in Metepec, in the same kingdom, of 156 families.

Alwololoning, a eetlement in the district of Colma, New Spain, of 60 Indian families.

Alotepre, ib. bas 67 families.
Alozozingo, ib. has 110 familiea
Alpizaoda, ib. has 36 familiea
Alporsces, ib. has 42 families Another, same name, of 115 families
Alporechangeo, ib. has 140 familiee.
Alpongca, ib. han 30 families. Another, same name, 77 families.
Altamafa, a tiver of Georgin.
Altotonga, the name of a settlement of Xalapa, in New Spain. The word signifies in the Mexican language, hot and saltish water, and this comes from the interraingled qualities of two atreama which originate in a mountain near to each aher, and form by their junction a river which runa into the lake of Alchichica.
Alzous, a settiement of 190 Indian families, of Tlapa, in New Spain, or Mexico. They are industrious, culivating maize, cotton, French beans and rice.

Alxorcmico, the Indian name for New England, on the map of "Novi Belgii," publisbed at Amaterdam in 1659.

Amacacres, a nation of Indians of Brazil, of the province of Rio Janiero. They inhabit the mountains south of the city. They are nomerous, and much dreaded, on account of the desperate incursions they have made into the Portuguese setulements. Their weapons are darta, and macanaw, a kind of club made of a very heavy wood. They poison their arrows and lances

Avalistes, a band of Algonquins, living on the St. Lawtence, and numbering 500 in 1760 .

Amanalco, an Indian settlament of the district of Metepeque, Merico, of 1224 families.

Ampares, a barbarous nation of Indians in New Andalueia, to the ween of the river Orinoco, near the mountains of Paria. They are valiant and hardy; sincere and faithful in their engagements They live by the ebace and by fishing. They make arms, which are tipped by vegetable poisons. They are at war with the Isaperices. Their territory is called, after them, Amapaya

Amaplocar, a eetlement of Tlapa, Mexico, containing 15 Indian families.

Amatepec, an Iodian settlement of Zultepec, Mexico, situated on the top of a mountain, consisting of 80 families. Another settlement, of the same name, in the district of Toltontepec, has 15 Indians familias. Both have a cold temperature.

Amatclar, a metllement of Hnitepec, in Mexico, containing 43 Indian tamilies.

Amatinctuin, a settlement of Tlapa, Mexico, containiag 62 Indian familias.

Amatlan, a settlement of Tanzitaro, Mexico, containing 60 Indian families. Another settlement of San Louis, has 380 families. Another, in the district of Cordova, has 220. Another, in Zacatlan 248. Another, in Cozamsopan has 150. All these bear the same name, with the prefir of the dedicatory patron, Santa Ana

Ambor, a bay of New Jersey. This part of the state was occupied, in ancient time, by a tribe or band of the Minci, who were called Sauhikans.

Amenico, a mettiement of Querataro, Mezico, containing 38 Indian families.

Anges, a settlement of Aulan, Mexico, containing 43 Indian families.
Ambcancon, a seatement of Chalco, Merico, containing 570 Indian families.

Anecaque, a settlement of Calpa, Mexico, containing 275 Indian families.

America; no nation of Indians on this continent, had, so far as we know, ever generalized sufficienty to bestow a geberic name on the continent The Algonquin terms "Our Country," Ainonnokigan, and "The Weab" Kabean, were probably the most comprehensive which their intercourse or ideas required. Equivalents for these phreses might he, perhaps, successfully songht among all the most advanced tribes. The instances hare given are from the Odjibwa dialect

Amicways, or Amicaware, a tribe or family of Indians, who are spoken of by the French writers as having formerly inhabited the Manatonline chain of islands in lake Huron. The term is from Amik, a benver. The Ottowas setuled here, after their discomfiture, along with the Adirondacks, on the St. Lawrence.

Anci-eminis, the group of Beaver islands of Lake Michigan. The easternmost of this group is called Amik-aindaud, or the Beaver-house. These ishands are inhabited by Chippewas. In 1840, they numbered 199 souls, of whom 39 were men, 51 women, and 109 children. All were engrged in the chase, or in fishing, and none in agriculture Their chief weas called Kinwabekizze.

Amikwug, a wild roving nation northwest of the sources of the Mississippi. See Beaver Indians.

Amipa, a setlement of Xochimilco, in Mexico, containing 730 Indian families, who live by agriculture.

Amiteprec, a settement of Juquila, M., containing 14 Indian families.
Ancxocones, a barbarous nation of Indians of Brazil They inhabit the woods and mountans south of Rio Janerio. They are crual and traacherous. They are at continual war with the Portuguese. Very litte is lmown of the territory they inhabit, or of their manners.

Annovalugaer, a name used in 1659 , for the southern branch of the Piscataqua river.

Ayola, or Amols, a judicial district in Guadnamara, Mexico. In the Mexican tongue, it signifies the land of many trees, as it abounds in trees. The change from o to $u$ in the word, is deemed a corruption.

Amoliepec, a setulement of Teozaqualco, Mexico, containing 96 Indian familiea

Amonoofuck, an Indian nume which is bome by two rivers of New Hampehire. Both take their rise in the White Mountains. The upper Arnoncosuck enters the Connecticut River, at Northumberland, near upper Coos. The lower, or Great Amonoosuck, enters the same river above the town of Haverhill, in lower Coos.

Amopocan, a seatement of Indians of Cuyo, in Chili, situated along the shores of a river.

Amozaque, a setlement of Puebla de los Angelos, in a hot and dry temperature, contrining 586 Indian faroilies.

Anfones, a barbarous nation of Indiens, in Paraguay. They inhabit the forest to the south of the Rio de la Plata. They are of small stature. They are divided into esveral tribes. They are coursgeous. They live on wild tropical fruits, and on fish which are taken in certain lakes. They preserve these by smoking. They enjoy a fine country and climate. They find gold in the sand of their rivers, and have some traffic with the city of Conception. Some convers have been made to the Cath olic faith.

Anves, a setlement and silver mine of San Luis de la Paz, in Mexico. It has 43 Indian Camilies, besides 93 of Mustees and Mullatoes. They subsist by digging in the mines.

Anuncas, a nation of barbarous Indians, descended from the Panches, in New Grenada. They live in the forests to the south of the river Magdalena. But little is known of them.

Anugkeno, the Indian name of a fall in the nver Merrmack, New Hampahire, 16 miles helow Concord, and 7 miles below Hookset falls.

Ana, Santa. Of the fify-five names of places in Mexico, or Netw Spaid, mentioned by Alcedo, which bear this name, seven are the seat of a joint population of 544 Indian families. Of these, 31 are in Zaqualpa; 117 in Zultepec; 124 in Toluca; 134 in Cholula; 18 in Yautepec; 25 in Mitta; 70 in Amaqueca; aod 149 in Huehuelan.

Anahuac, the ancient Indian dame of New Spain, or Mexico. The valley of Mexico, or Tenochitlon, is, according to Humboldt, situated in the centre of the cordillera of Anahuac. This valley is of an oval form. Its leagth is 197 leagues, estimating from the entry of the Rio Tenango into lake Chatco to the foot of the Cerro de Sincoque, and $12 \downarrow$ leagues in breadth, from St. Gabriel to the sources of the Rio de Escapusalco. Its territorial extent is $244 \frac{1}{1}$ square leagues, of which only 22 square leagues
are occupied by lakes, being less than a tenth of the whole surface. The circumference of the salley, estimating around the crest of the mountains, is 67 leagues. This crest is very elevated in most parts, and embraces the great volcanoes of La Puebla, Popocatepetl, and Izsacchihuatl. There are five lakes in this valley, of which, that of Tezcuco is the larges. All are much diminished in the quantity of water they yield, since the 16 th century, which is owing, in part, to the destruction of trecs by the Spaninrds, but most directly to the canal of Huehuetoco, cut through a monntain, by which the watere are drawn into the river Panuco, and thas find their way into the Allantic. By this work, the city of Mexico iteelf was freed from all effects of periodical inundation, and the site enlarged and rendered better suited to streets and carriages. The waters of Jake Tezcaco are impregnated with muriate and carbonate of soda. Those of Xochimilco are the most pure and limpid. Humboldt found their specific gravity to be 1.0009 , when distilled water at the temperature of $54^{\circ}$ Fahrenheit, was 1.000, and that of Tezcuco 1.0215 .

Of the five lakes mentioned, Xochimilco and Chalco contain $6 \boldsymbol{f}$ equare
 The valley is a basin, surrounded by an elevated wall of porphyry mountains. The botom of this basin is 2,277 metres, or 7,468 feat above the sea.

Analco, a seulement of Guadalaxara, in Mexico, containing 40 Indian families.
Anasagutakoos, a band of the Abenaki, on the sources of the Androecoggin, in Maine.

Ancamares, a nation of Indians inhabiting the shores of the river Msdera. They are very warlike and robust. In 1683 they attacked the Portugnese, and compelled them to give up the navigation of the river. They are divided into different tribes. The most numerous are the Ancamares, who inhabit the shores of the river Cayari.
Ancas, a nation of Indians in Peru, who, on the 6th Janaary, 1725, were overwhelmed and destroyed by the ruins of a mountain which hurst forth by an earthquake. Fifteen thousand souls perished on that occasion.
Ance, or Hance's band of Cbippewas, living at Point St. Iguace, on the straits of Michilimackinac, in Michigan. This band, in 1840, as donoted by the annuity pay rolls, numbered 193; of whom, 33 were men, 64 women, and 106 children. They subsist in part by hunting the small furred animals still existing in the country, and in part by fishing. They migrate from place to place, as the season varies, plant very litde; and are addicted to the use of ardent spiris.

Arclote, an island on the southwest coast of Florida; alan, a river flowing int the gulf at that locality, which is aloo called, in the Seminole dialech, the Est-has-hotee

Arcurenes, a nation of infidel Indians inhabiting the foreses of the river Napo, in Quito. They are numerous, sarage, treacherous, and inconstant.

Andastes, a nation formerly inhabiting the territory on the southern ahores of lake Erie, southwest of the Senecas. Thcy were extirpated by the Iroquois.

Andaig Weos, or Crow's Flesh, a bereditary chief of the Chippewn nation, living towards the close of the lat century at the ancient Indian village of La Pointe Chegoimegon, on lake Superior. He possessed qualities, which, under a different phasis of society, would have developed themselves in marked acts of benevolence. Numbers of anecdotes, favourahle to his character, are related of him, and have been handed down by tradition among the French residents on that remote frontier. Although a warrior, engaged in frequent expeditions against the enemies of his tribe, he opposed the shedding of the blood of white men who were encountered, in a defenceless state, in the pursuits of trade. He also resisted the plunder of their property. He had a strong natural sense of justice, accompanied with moral energy, and gave uturance to elevated and ennobling seatiments in bis intercourse.

Andreas, Sar. A settlement of Texupilco, in Mexico, containing 77 Indian families ; another of Toluco, of 134; another in Tlatotepec, of 33 ; another in Tuxtla, of 1170 ; another in Guejozingo, of 15 ; another in Papalotepec, of 20 ; another in Hiscoutepec, of 68 ; another in Tepehuacan, of 40 ; all under the same dedicatory name.

Androscoognt, the main western source of the river Kennebec, in Maine.

Angagu, Santlaco Dr; a settement of Valladolid, Mexico, conbaining 22 Indian families.

Angamocutrio, a settlement of the same district with the preceding, containing 106 Indian families.

Anosraes, a province of Pern, containing six curacien or parishes of Indians.

Angeles, Puerla De Loe, the capitol of the province of Tlazeala, in N ${ }_{0}$ m Epain, or Mexico, founded in 1533. The entire number of Indian famjlies within this important jurisdiction is 3,200 , which, at the ordinary rate of the estimation of Indian population here, that is, five souls to a family, gives an aggregate of 16,000 . These are descendants of the ancient Azteecs, who inhabited the country on its conquest

This is, however, but the population of the chief town or capital. The entire intendency of Pueblos de los Angeles contrined, in 1793, 508,098 rouls. Of this nuraber, 373,752 were Indians of pure blood, divided into 187,531 males, and 186,221 females. There were also 77,908 of the mixed race, divided into 37,318 males, and 40,590 femsles. But 54,980 were Apaniards, or whites, exclusive of 585 secular ecelesinstics, 446 monics, and 427 nons.

This preponderance of the native Indian population is still more striking in the government of Ilaxcals, which, of course, includes the capital above named. In 1793, it contained a population of 59,177 souls; of which, 42,878 were Indians, divided into 21,849 males, and 21,029 femalea. The town is governed by a Cacique, and four Indian Alcaldes, who represent the ancient heads of the four quarters, still called Teepectipac, Ocotelelco, Quishtuitalan, and Tizatlan. By virtue of a royal cedula of 16 th April, 1585, the whites have no seat in the municipality. The Cacique, or Indian Governor, enjoys the honors of an alferez real. Notwithstanding the zeal of a Spanish intendant general, the progress of the inhabitants in industry and prosperity has been extremely slow. The secret of this is, perhaps, revealed in the fact that four fifths of the whole property belongs to mort-main proprietors, that is to say, to communities of monks, to chapters, corporations, and hospitals. Their trade is aloo depressed by the enormons price of carriage from the table lands, and the want of beasts of burden.

The geology and antiquities of this part of Mexico, are equally interesting. The intendency of Puebla is traversed by the high cordilleras of Anahuac, which, beyond the 18 th degree of latitude, spreads into a plain, elerated from 1,800 to 2,000 metres above the level of the ocean, or from 5,905 to 6,561 feet In this intendency is also the Popocatepetl, the highest mountain in Mexico. Humboldt's measurement of his voicano makes it 600 metres ( 1,968 feet, ) higher than the raost elevated summit of the old continent It is, indeed, only exceeded between Panama and Behring's Straits, by Mt. SL Eliss.

The table land of Puebla exhibits remarkable vestiges of ancient civit ization. The fortifications of Tiaxcala are posterior in the date of their construction to the great pyramid of Cholula. This pyramid, or teacalli. is the mast stupendous monument erected by the race. Its equares art arranged in exact accordance with the astronomical paraliels. It is constructed in stages or terraces, the highest of which is 177 feet above the: plain. It has a base of 1423 feet By a passage excavated into the nonn side of it, a few years ago, it is found to be solid, and to consist of alternats: layers of brick and clay. Its centre has not, however, been reached. It height exceeds the third of the great Egyption pyramids of the group os Ghiza. In ita base, however, it exceeds that of all other edifices found by travellers in the old continent; it is alroost double that of the great pyremid of Cheopa To conceive of the vastness of the structure, let the traveller imagine a square four times the size of the Place Vendome, piled up with brick, in terraces, twice the utmost height of the palace of the Lonvre.

The Indians of the province of Tlaxcala speak three languages, differing from one another, nemely: the Mexican, Totonac, and Tlapanac. The first is peculiar to the inhabitants of Puebla, Cholula, and Tlascalla;
the second to the inhebitants of Zacalan; and the third is preserved in the environs of Tlapa. The population of the entire intendency of Puebla, in 1803, that is, ten years after the census above noted, had advanced to 813,300 in an extent of 2,696 square leagues, giving 301 inhabitants to the square league. Small as this may appear, it is four times greater than that of Sweden, and nearly equal to that of the Kingdum of Arragon.

Anlasis, a barbarous nation of South American Indians, in the Ilanos of Casanare and Meta, in the new kingdom of Grenada. They are doscended from the Betoyes. They are very numerous, and of a geatle nature. The Jesuits established a mission among them in 1722.

Annaciore, or Annacous, a barbarous nation of Indians, of the province of Puerto Seguro, in Brazil. They inhabit the woods and mountains to the west, and near the rivers Grande and Yucara. They are in a constant state of warfare, night and day. They are irreconcileable enemies of the Portuguese, whose colonies and cultivated lands they continually infent, and which they destroyed in 1687.

Annemosing, the name of the Otowas, and Chippewas, for the Fox Lslands, of lake Michigan. It is derived of Annemose, a young dog or fox, and ing, a particle denoting place, or locality.

Annemikeens, a Chippewa hunter of Red River, in Hudson's bay, who survived a conflict with a grisly bear. After being terribly lacerated, in his face and limbs, but not deprived of consciousness, he affected death. The animal then seized him gently by the neck, and dragged him to a thicket, where he was left, as it was thought to be eaten when the calls of hunger should demand. From this position he arose, first setting up, and binding parts of his lacerated flesh down, and afterwards rose, and succeeded in reaching his wigwam, where, by skill in the use of simples, his wounds were entirely healed. The name signifies little thunder, being a compound from Annimikee, thunder, and the diminutive infiection in us.

Annutinigo, a hammock brought to notice in the late war with the Semidoles, in Florida. It is situated east of the Withlacooche river.

Anolaima, a setlement of focaima, in New Granada, containing a small, but indefinite population of Indians.

Antalis, a berbarous and warlike nation of Indians, in the kingdom of Chile, to the west of Coquimbo. They valorously opposed the progress of the Inca Yupanqui, compelling him, in the end, to terminale his conquests on the other side of the river Maule, the last boundary of Peru.

Antiquities. See the articles Grave Creek, Marriets, Circleville, \&c.
Anthony St. ; the falls of, being the fourth and lowermost of the perpendicular, or prominent falls of the Mississippi, and by far the greatest.

The first fall of this stream is the Kakabika, situated about half a day's journey below Itasca lake; the second is called Pukagama, and occurs be-
low the influx of the Leech lake branch. The third is below Elk river, and is passable in boats and canoes. St. Anthony's is the roost considerable of the series, and the only one which presente an abrupk plunge of the aream from horizontal rocks. They were thus named by Hennepin, about 1680. By the Dacomh Indians, who inhabit the country, they are called Haha. It is at this point, that the Missiseippi, which gathers ita waters from high table lands, and has its course, for several hundreds of miles, through diluvions superimposed on the primitive, first plunges into the great secondary formation. For more than a thousand miles, in its way southward, its banks are rendered imposing and precipitous by this formation. At or near the Grand Tower, and iss adjunct precipice, on the Missouri shore, this formation ceases, and the river enters the great delta, which still confines it, for a like distance, before it expands iseelf, by tis bifurcations, and final exit, in the Gulf of Merico, at the Balize.

Antono, San. The following slatistical facts, denote the Indian population, of sundry settlements, bearing this name, within the former government of New Spain, now Merico. In the limits of Toliman, 32 families; in Tampolomon, 128 ; in Toluca 51 ; in Metepec 261 ; in Coronango, 44 ; in Huehuetlan, 140; in Chapala, 27.

Apacabund, or White Eyes, a Delaware cbief of note, of the era of the American revolution, who is frequentiy mentioned in documents of the times.

Apaces, San Juan Bautsta De, a eetlement of Zelaga in the province and bishopric of Mechoscan, containing 135 Indian families. Another setllement, of the same name, with the dedicatory title of Santa Maria, in the district of Zitaguaro, containg 24 families.

Apaches, a nation of Indians, located between the Rio del Norte and the sources of the Nuaces, who were reported, io 1817, at 3,500. In an official repart submitted to Congress, in 1837, their numbers "within sariking distance of the weatern frontier," are viguely put at, 20,280 .
(To be continued.)

Wiborezo, opposed himself to the practice of the Indians giving their daughters to white men, without the English rite of matrimony. He was the legitimate ruler of his nation; he had succeeded to power by right of birth, and had justified bis use of it, by great personal bravery and capacity to command; hut he clearly perceived that degradation begins in the constitution of the family. He exacted this rite in giving away his youngest daughter. Johnston of Craiga, in the north of Ireland, who made this pledge to the aboriginal potentate and moralist, faithfully redeemed it It is in this manner that his name becomes honorably connected with the history of the race.

# AUTOBIOGRAPHICAL LETTEERS 

# LATE J0HN JOHNSTON, ESQ., 

## LETTER V.

## St. Mary's Falls, 28th April, 1828.

## MY DRAR AR,

Though it requires little, if any mental effort to continue a story ach as mine, yet I have found sickness an effectual preventive to the least exertion for more than six weeks past. But as I find myself relieved from intense pain, I once more lake up my pen to mention, bat after spending a week in Montreal, I took a place with the king's coarier in a calaish for Quebec. We travelled day and night, so that I never put off my clothes, nor got a moment's rest, except whilst changing our voitare, or when my companion delayed balf an hour to lay in a stock of bacon and eggs, or some such delicate fare, sufficient one would have thought, to sustain a ressonable man for a week. But my friend Mobsienr Labadie weighed nearly 300 lbs . and was determined that neither bad roads, nor the most jolting vehicle in the world, should cause the least diminution of his en bon point. I paid two guineas for my seat, and had the honour beside of treating Mr. Labadie to all his slight repasts. We arrived the third day, and at Franks' Hotel I soon got over my fatigue and privations. I was not sorry to find that Lord Dorcbester was yet at his country house, as it enabled me to ramble over the town, the plains of Abrabam, \&c. \&cc. I had never before been in a fortified town, unless the old crumbling ramparts of Londonderry, could entitle it to the name. 1 therefore took great plensure in strolling on the walls, and enjoying the variety of prospect presented from them; however, my entire ignorance of garrison duty led me into a scrupe ludicrous enough, though it ended pleasantly. In pursuing my walk one day along the rampats, I met the first sentinel, who called out to me to stop and return, if I bad not a pass. Thinking the fellow only wanted to extract some money from me, I continued to approach, when he brought his musquet to the charge, and swore he must do his duty. Seeing the poor man was
in earnest and apparently agitated, I returned, and as evening was near, I returned to my lodgings. The next moraing, before my usual hour of rising, Mr. Franks came rather abruptly into my room, to infonn me that the town Major was below enquiring for me, end to bring me with him to Col. England, the commandant. I bade Mr. Franks tell the Major, that if he would call in a couple of hours, when I should have dressed and breakfasted, I should with pleasure accompany him. Shortly after Mr. Franks entered again, and very seriously informed me, I was taken for a spy; but as be had formed a good opinion of me, if I wished to evade examination be would facilitate my escape. I told him I was much obliged to him for his proferred friendship, but could not think of atirring until I had got iny breakfast and seen the town Major. He stared at me, and said he believed I was sometbing more than I appeared to be. I left him to enjoy his sage conjecture, and went down to breakfast The Major was punctual to his hour, and I went along with him to Col. Englaod. My affair was soon cleared up, and the Colonel asked me to breakfast the pext morning, and presented me with a paper, allowing me to visit the works at the proper hours, and any company I chose to take with me; which arose from my having mentioned, that some people from Montreal, with whom I had got acquainted at the hotel, wished to visit Cape Diamond, If

I had got acquainted with Mr. Motz, Lord D's private secretary, to whom I gave my letters. In a few days after, his lordship came to town, when I had the honour of being introduced, and was reccived in a very kind and friendly manner; but as Providence would have it, General Sir Alured Clark now arrived with the commission of Governor General, and with letters of recall for his lordship: however he decided not to risk Lady Dorchester and the family at so late a season, therefore, continued in office during the winter. His lordship continued very kind and hospitable to me, and questioned ma as to the fate of uncles who hed been his schoolfellows. He introduced me to the chief merchants of the town, and wished me to write my ideas on the practicability of opening a direct trade with Lreland. In two or three days my memoir was finished, and he again invited me, along with the gentlemen concerned, to dine at the castle, when the affair was fully discussed. They all acknowledged the justice and utility of the statement I bad made, but candidly avowed, that their connections in London, and the general nature of their imports, precluded their taking advantage of a direct trade; though it was very evident, that the products of Ireland, coming circuitously through their English correspondents, cost them much dearer than they otherwise would. Thus all prospect of entering into the mercantile line, fell to the ground, and I announced to bis lordship my determination to return to Montreal; he then told me, is he was determined not to take bis family home at eo late a season, be would introduce me to the
bishop of Canada, where I would spend the winter agreeably, and leam to speak the French language, and was so kind as to add that if in the interim, any place worth my acceptance became vacant I should be appointed to it However, I persisted in my resolution, not deeming it prudent to spend my time and money, waiting for a contingency that might never occur. A few days after I took ruy leave, and was to set off the second day afier, in company with a young ensign, who was going to join his regiment at St John's. But before I leftown, Mr. Mou came to me with an offer from his lordship, of a township on the Acadian line, but on enquiry, I found it would require a considerable sum of money to make the requisite locations to secure the title. I therefore begged lenve to decline the offer, as neither saiting my means or inclination. In a short time alter, Mr. Mour again returned-and in the moest delicate manner told me, he was authorised to offer me any money 1 might stand in need of for the winter. But as my funds were still far from exhausted, and as my determination was never to lie under a pecuniary obligation, I might not easily be able to repay, I excused myself by assuring him I had a sufficient supply for the winter. But I requested that his iordship would favour me with a leter of introduction to Sir John Johnson, of whom, and of his father Bir William, I had read and heard enough to inspire me with admiration, and a wish to have the honour of his nequaintance. I received the desired letter in the evening, and the nert morning left Quebec in a cartiole, with my young Scots companion. Though early in November, there was nearly a foot of snow upon the ground, and we contiuued the use of carrioles until we came to Three Rivers, from whence we took calaishes into Montreal.

My friend Mr. Tod received me with the utmost kindness, and introduced me to several officers and gentiemen of the town. Sir John Johnson was absent on an excursion to the lake of Two Mountains, hut his cousin Capt. Dease, showed me the kindest attentions and hospitality, and took me with hirn to his house in the country, where I remained until the arrival of Sir John, on whom we called the day after, and I presented my letter from Lord Dorchester. The reception I met with has leftan in. pression that can never be effaced from my heart; and the unabated friendship and hospitality I have ever since been honoured with by bim, Lady Johnson, and the ladies of the family, when several limes paseing a winter in Montreal, shall ever remain amongat ray most grateful and pleasing recollections.

As I could not think of being a tax on the hospitality of my Montreal friends all winter, though much pressed by Sir John to take up my abode with him, I took lodgings at the village of Varennes, about fifteen miles from town, on the opposite side of the St Lawrence, at a Mr. Vienne's, where I continued my study of the French language, which I had com-
menced before I left Ireland, and began to apeak it pretry mucb as a child begins to walk, stumbling at every step; but to the honoar of French urbanity and politeness, my greatest blunders were corrected without subjecting me to the pain of seeing my awkwardness and ignorance, the subject of mirth or ridicule.

I risited Moatreal several times during the winter, and autended the as semblies, which were conducted with great decorum, and where Lady Johnoon and her daughter, just then brought out, were received with every degree of deference and respect. The winter passed off very agreeably, and in the beginning of May 1791, I returned to Montreal, to take my passage with my friend Andrew Tod for Micbilimackinac, by the North or Orawis river. The mode of travelling in a hirch canoe, the wild and romantic scenery on each side of the river, all was new and charming to me, except the last five or six days of our voyage, when the musquitoe annoyed us beyond all endarance. L, who had nohing else to do but defend myself from them the best way I could, was left a perfect spectacle of deformity, my cyes near closed up, and my mouth distorted in a most frightful manner; judge then the condition of the poor meb, ongaged in carrying the baggage over the portages with their faces, necks, and breasta, exposed, and the blood and sweat in commingled streams running from them. But they seemed to mind it very litlle, making game of some young men whose first trip it was, whom they called mangers de lard, or pork eaters, and treated with great contempt if they expresed pain or fatigue. We arrived the 16 th at Mackinac, and were received with great politeness and hospitality by Capt. Charleton, of the 5th foot, then commanding. I had been acquainted with him in the north of Ireland, when in command in the town of Coleraine. Our meeting so unexpectedly at a distance of more than four thousand miles from home, was very pleasing to both, and called up a variety of mixed ideas, some of which to me were rather painful, as they contrasted my present situa tion, with the time I had received him bospitably at my mother's housa, when placing a detachment to guard the wreck of a ship cast awny, within less than half a mile of Craige. As the traders, neither from the Mis sissippi or the Lake Superior, had yet arrived, I had some weeks leisure, which 1 employed in exploring the island and in reading. I shall there fore here conclude this tedious epistle with a promise, that my nest shall have at least the merit of novelty to recommend it

Ever truly yours, JOHN JOHNSTON.

## LETTER VI.

St. Mary's Falls, 101 June, 1828.

## My Drar err,

LLL healh and often depression of spirits, owing to the iniquitous manner in which the Indian trade is, and has been always carried on here, and in fact all over the continent, with the addition of painful reflectiona, on my own imprudence and inability to compete with opponents equally active as unprincipled, have been the cause of my letting so long an intorvil lapse since the date of my last Bat I now resume my pen in hopes of presenting you with a sketch of the arrival of the traders, and the shifting of the scene from streets unoccupied, where dulness and silence reigned unmolested, to houses crowded to uverflowing, where riot and revelry, festivity and song, swept all descriptions down its heady current with scarcely a single exception. The excuse pleaded by the traders is their many fatigues, risks and privations during the winter, and often nn entire seclusion from all society, so that when they again meet at Mackinac, where they are sure to see their Montreal friends, and an ample supply of wines, spirits, \&ec. \&c., they think themselves entitled to make up for what they call lost time, hy making the most of the short interval that elepses between the sale of their furs, and their repurchese of gaods for a new adventure. The chief traders and Montreal merchants keep open table for their friends and dependants, and vie with cach other in hospitality to strangers. But the excess to which their indulgence is carried, seldom ends without a quarrel, when old grudges are opened up, and language made use of that would disgrace a Wapping tavern, and the finale a boxing match, as brutal and ferocious as any exhibited in ancient times by the Centaurs and Lapythe.

But were I to relate all I have heard and been an untwilling witness of, this would become a chronicle of acandal instead of a letter, I ahall therefore let the curtain drop for the present, only retaining the liberty of taking it up occasionally, as new acts of this far from delightful drama, may present themselves to my recollection. The Montreal canoes began to move off with their cargoes of furs and pettries, during the month of July, and the traders whose posts were the most distant, were chiefly all off by the beginning of August, so that tranquillity and rationality began to reassume their long forgoten sway.

About the middle of August my friend Mr. Tod, fitted me out with a canoe of the largeat size, with five Canadian boatmen or voyagers, to winter at La Point, in Lake Superior, which station I preferred to one more to the South.

Owing to constant high winds, it. was lato in September before I
arrived at my destined winter ground, where I met with Count Andriani, an Italian nobleman and philosopher, who was taking observations to ascertain whether the earth was more elevated or depressed towards the poles. The conclusion he had come to was, that at the poles the earth must be flatter than at the equator, for we were then at Lapoint, a distance of two thousand miles from the ocean, not more than 690 feet above its level. The subject was then much discussed amongst naturalisss, but is now given decidedly in favour of the equator, and I hope the diffieulty is now set at rest for ever, for were the high aspiring paries to move towards each other in hostile array, the consequences would be rather disagreeable to us emmis occupying the intermediate mole hills. As soon as the count left me to continue his tour of the lake, I sent off two of my men with a small equipment, to winter in the Mauvaise or Bad River. The others I set to fishing, that we might lay in a stock for winter store, the cold weather having commenced early in October. I now gor a house of round $\log s$ finished for myself, the interstices plastered with clay, and a chimney of the same material; my men had aiso a similar house for themselves, and I begen to get fire wood cut and brought home, while the wearher was yet favourable. But on the 17 th of November my faithful Canadians deserted, laking with them my fishing canoe, an oil cloth, nets, axes, \&c. and nearly all my fisb, leaving me only a lad of 17 or 18 , who slept in my litule kitchen, and who luckily could speak a litele Otwwa, by which he could make the Chipperays understand him, I had as neighbours two Canadians, who from having acquired a knowledge of the language, had become traders; they, as well as their men, knew of the desercion of my people, and had connived at, if not encouraged them in it 1 was thus left in the midst of savages and Canadians, much baser and more treacherous than they, to encounter a winter on the shore of Lake Superior, with only one attendant, a very short allowance of provisiong, and deprived of the means of fishing, which I had ftattered myself would have been a sure resource, at least against actual wank. I sat down rather in bad spirits to ruminate on my situation, and at length it atruck me that my case in many particulars, had a resemblance to that of Robinson Crusoe, and I got up determined to follow his example by making every exertion in my power to ameliorate it.

I began immediately to prepare axes, and aet to chopping ture wood, which I and my man carried home on our shoulders. The distance luckily was not great, for I was unwilling to touch about five cords left by my men, which I considered a dernier resort, in eases of bad weather or any accideat. We got on very well the first day, but the second my bands became blistered, and I persisted till my are handle was atained with my blood. I then proposed to my man that he should continue to chop and I would be carrier; this induced emulation, for I proposed to carry at fast as he could chop, and in less than a fortnight we had six
cord more at our door, beside a good many large loge that we were obliged to roll. Constant exercise gave appelite for our humble fare, and fatigue induced sound sleep that left linle time for painful refection.

The Indians had left us for some time, and had gone to a considerable distance on their hunting excursions, all except the old fauher of the chief, who only went to a small river in the bay of Sc. Chorles, from whence, however, he returned just as the ice in our bay was clasing. My good neighbours rushed into the water and hauled the canoe to shore, and without ceremony possessed themselves of eight or ten beavers the old man had killed. They kept him, his two wives, and a Mra. Jayer, one of his daughters, who wintered with him, in a constant state of intoxication for some days, at the end of which they fairly wraed them out of doors, telling them they must provide for Hemselves, as they would feed them no longer. Some time after the old man came to me and coraplained of hunger, as his wives could not go to a depasite of wild rice they had concealed at a considerable distance, the weather having becomo very bad, and the snow too deep to waik without gnow shoes. I told him I would not see him or his family starve, though I much feared I ahould wans food long before spring, and that he ought to reeollect he had not paid me a small credit I had made him, before he weat to hunt. He acknowledged the fact, but said, those who had taken him to shore made him drunk, and kept him so, until his liule slock of fure was exhausted, though be koew not what he had received in return, except his meat and drink for a few days. I accepted his excuse, and continued to treat him all winter with greal respect, es he showed me a large bugle helt, with which, and a silver gorget, he had been presented by Sir William Johnson after be fall of fort Niagara to the British forees. He said he had kept his belt free from stain until now, and hoped his son Wabajec would continue to do so after he sbould be gone to the land of spirits.

Mr. Johnston thus lays down his pen at the threshold of his entrance upon a new theatre of life, presenting to him objects and means so different from all he had left behind, that the experience of the past afforded hat litule to guide him in the conduct of the futare. The disappointments he had mat with had not, however, soured bis temper, or damped his spirits. He was ardent, young, active, passessed a constitation anturally vigorous, with a disposition social, frank, and open, a high sense of probity, a firm dependance upon providence, and a heart glowing with ardent aspirations after truth, and governed by the broadeat principles of active benevolence He was now about to commence the most important period of his life, embracing a reaidence of the better part of half a centary in the remote solitudes of the Americen forest, separated from the society in which he had derived so much of his former eajoyments, and thrown
wholly apon his own resoarcee. He wes brought to endure privations and to encounter perils, of which he had heard before only in the history of suffering bumavity. The incidents of his new situation also brought him into contact and acquaintance with some of the most noted individuals who have figured in the commerce and politics of the Canedas during the last forty years. And had he been spared to complete his autobiography, it would have led him to mention the names and characters of many of his cotemporaties, and to advance a fund of anecdote, and bistorical and other data, exhibiling a lively picture of his times. Soveral of the oceurrences of this era, relative to the northwest Fur Trade, are of dramatic interesa; but the veil which covers perfidy and crime would have been raised by him with extreme reluctance. He evidently contemplated with pain the approact of his narrative to the period when it would become necessary to allude to the fierce strifes carried on between rival monopoLists in this trade, and as imposing a task which seemed like "walking opon the ashes under which the fire is not yet extinguished."

What he has not, however, furnished, it would be difficult to supply, few materials for the parpose being known to exist. He very rarely kept copies of his letters, none of his private letters, and never preserved the lettere sent to him by others. The scanty materials I have been able to collech, were preserved entirely by other hands. He had an aversion in his latter years to writing at all, or rather the irksomeness of the task, was owing to ill health, which left him but a small portion of his time withoat the sense of acute pain. Aad he destroyed many letters and communications which a person of greater business habits, or more distrust of the world's sincerity, would have induced him to preserve Facis, datees, and occarrences have thus, in a measure, become blended in vague recollections on the pert of his friends and family. A continuation of bis Life, on any thing like the plan commenced by himself, is therefore impossible, and will not be attempted. Even the hrief notices which follow would hardly be undertaken, were it not for the abruptiness with which his manuseript terminales, and for a desire to aid in holding from oblivion the name of a man, who, gifed with powers to shine in poliehed circles, gave up the world for the salke of raising up to virtue and piety a numerous family, under peculiar circumstances. For it was in this region, to which he has conducted the reader in bis letters, that he connecied himself, by intermarriage, with one of the leading familien of the native race-

Mr. Johnston's cerliest efforta in the fur trade were successful, notwithstanding the perfidy of his men, who deserted him during his first season. And he continued his efforts with prospecis more flatering, as experience made him acquainted with the difficulties to be encountered, and the precautions necessary to ensure success. This traffick has always been parsued at great personal, as well as pecuniary riak; but he soon found himself placed in a aituacion, in which it becarne the duty of suberdinatea to
make those exchanges with the natives, which frequently require a patient submission to caprices and superstitions repugnant to a sensitive mind. And while every season was supposed to abridge the period of his ctay in the country, he indulged in those reflections and anticipations, arising from a temporary pursuit

Mr. Tod, under whose auspices be had entered the Indian country, inrited him to settle at New Orleans, where this enterprising merchant had obtained from the Spanish Governor General of Louisiana, the monopoly of the fur trade of that province. But the invitation was declined from a dread of the climate, to which Mr. Tod bimself soon fell a victim. About the same time an opening presented itself to Mr. Johnston, for bis settle ment at Green Bay ; but his predelictions in favor of a more northern position predominated, and be fixed his residence at the Falls of St Mary, in 1793. He bad the year previous married the youngest daughter of Waub Ojeeg, the beredistry and war chief of Lapointe, in lake Superior, and now came to establish bimself in permanent buildings at a spot commanding the great thorougbfare into the Nortrumest. By this term we include an immense tract of wilderness, intersected with lakes, rivers, and mountains, which has been distinguished from the carliest times as the seat of that great and bazardons branch of internal commerce, known under the name of the Fur Trade.

A high, and it may be though, a prond spirit of personal independenoe, which bad been one of the original cauces of his coming to America, and which disdained all secondary modes of action, kept him aloof from the great rival companies, who have, at various times, borne sway over the northern regions. He either declined the offers of participation in these eomewhat two celebrated fraternities, or neglected the means necessary to a copartnercy. While be thua kept free from entanglements in a system which be could not always approve, he, however, ran riples of another kind, and atood somewhat in the position of a man between two fires, who can neither flee to the right nor to the left Luckily his course lay sraight forward, hut it is scarcely possible that a man of less intrepidity of character in the hour of need, or urbanity of manners in the social circle, could have suctained himself.

Just and honorable in all his intentions, though they were sometimes grosely misinterpreted, be expected equal justice and fair dealing from ochers. And when not thus openly met, he did not hesitate to give vant to a strong and manly expression of his feelings, regardlese of consequences. This was sometimes the cause of future bitterness and petty resentments. He escaped once the blow of a secret assassin; once the risk of a combat with pistols, with the slight lose of a lock from bis temples; and twice, so far as I recollect his own relation, the brutal fury of the Indian knife. His own resenuments were momentary, and he took a delighs, When ciremmances had placeed an antagonis in his power, in forgiving
injories and relinquishing advantages, and in throwing the shade of oblivion over all the errors and frailties of the past. His reliance upon the overruling hand of providence, wherever placed, was unbounded; and I know not that it has ever fallen to my lot to become intimately acquainted with any person who could, at the seasons of his greatest affliction, exclaim with such trusting confidence, "Thy will be done."

It may be inferred from these passages, that the business in which Mr. Johnstion was engaged, was one for which his disposition and mental habits did not particularly qualify him, and which he would not himself have chosen, could it have been presented to him with all its repulsive, as well as attractive features, on his first coming to the country. Nothing, in fact, could be less congenial to his taste. Once, however, eagaged in it, and he appeared, as he himself observed, to be hurried on by a fatality which seemed to forbid a return to his native land. And the prospect of getting on in the world, without imposing any pecuniary burthens upon his rela-tives-a point on which be was peculiarly sensitive-determined him to contipue, as a fixed employ, what he can hardly be said to have selected of his own free will.

In the ordinary intercouree of the Indians with Mr. Johnston, at his residence at St . Mary's, he was their adviser, physician, and friend. And his disinterested conduct on many occasions led them to perceive that he had placed his claims to their friendship, on higher grounds than the mere prospect of gain. His house wis the resort of the needy Indian and Canadian -
"And ev'ry stranger found a ready chais."
He possessed an active coadjutor, in acts of charity, in Mrs. Johnston, the daughter of Wabojeeg, whose kindness and practical benevolence were in full unison with his own. He alweys kept in his dwelling a full supply of medicines, which he administered gratis to all who applied. He used the lancet freely in cases of pleurisy, which is a common complaint among the natives. Although he had made no professed study of medicine; his practical knowledge, aided hy books of reference, was respectable; and when the Surgeons of the United Slates Army afterwards came to be placed in his viciaity, they deemed several of his modes of practice judicious. He was ofen the means of granting relief, where relief depended upon the ordinary remedies of common complaints, and be seldom ventured upon other prescriptions. But his tact and decision in this department proved that, had he given early and proper attention to it, he was capacitated to have excelled in it.

The readiness with which be conld be approached by complaints of povery and bad luck, and the little effor at required to enkindle his charitahle feelings, sometimee led him to be imposed upon by the inland clerks and servants in his employ. A tale of suffering seldom failed to reconcile him to loss or disappointment, which, there is good reason to
believe, was frequently attributable to a want of proper diligence and economy, or still more inexcusable faults on their parts.

With dispositions thus liberal, and surrounded by opponents whose vigilance was constandy on the watch, and who, in some instances, were relieved from those scruples of conscience which kept him ever above a mean act, and led him to despise trick and finesse, it may be anticipated that his march in the road to wealth was not so rapid as those who could reconcile themselves to life in the Indian country without ordinary comforst, and who looked upon every dollar spent to purchase a book, or a vase, as so much money thrown away. If Mr. Johnston bad any fault in this respect, it certainly bordered on the opposite extreme; and in ordering his household expenses, he might sometimes incur the imputation of being profuse. Yet he succeeded from the oulset, often meeting with successes which he had not anticipated, and added steadily to that income, on the yearly re-investment and increase of which, he depended. Twenty years devoted to this pursuit, placed him in a state of comparative independence, and grve him the chief control of the trade of the southern shores of lake Superior, and some of the adjacent regions. He contemplated his declining years, and the provision he would be able to make for his children with satisfaction. But even now causes hegan to be put into operation, which were destined to undernine the sources of his prosperity. These will be mentioned at the particular time that their effects became visible, and in the meantime I shall advert to domestic incidents, which had a powerful effect both in creating joy and sorrow.
(To be coalinued.)

Barbarism is a declension from civilization. Man was created in a ciciilized, not a savage slate. Adam was a horticulturalist; Abel a shepherd; Cain a farmer. They greatly err, who lay down the theory that the primitive ages were ages of barbarism. We see hy the example of Noah and his family, that the declension had not bappened in sisteen centuries. The postdilurian race were vintners and culivators of the soil, and not hunters. Hunting, it is clearly revealed, began after the exprees permission to use animal food, and is righly to be traced to the epoch of Nimrod.

The Indian is the proudest man in the hurann family. Pride makes him a warrior and a hunter. Pride granta him his triumph at the stake. Pride keeps his hand from the axe, the hoe, and the plough. He connecta the idea of slavery and degredation with labour. It was pride, doubsless, that first led him into the woods, and pride, we mav add, keeps ham there.

## SKETCHES OF THE LIVES OF

## NOTED RED MEN AND WOMEN

## WHO HAYE APPEARED ON THE WESTERN CONTINENT.

## WABOJEEG, OR THE WHITE FISHER.

This individual has indelibly interwoven his name with the history of the Chippewa nation, during the latter half of the 18 th century. His ancestors had, from the earliest times, heid the principal chieftainship in lake Superior. His father, Ma-mongazida, was the ruling chief during the war of the cnnquest of the Canadas by the British crown. In common with his tribe and the northern nations generally, he was the fast friend of the French government, and was present with his wartiors, under Gen. Montcalm, at the loss of Quebec, in 1759. He carried a shor speech from that celebrated officer to bis people in the north, which is said to have been verbally delivered a short time before be went to the field.

The period of the fall of the French power in the Canadas, is one of the most marked evenis in Indian reminiscence throughout all northwest America. They refer to the days of French supremncy as a kiad of golden era, when all things in their affairs were better than they now are; and I have heard them lament over the change as one which wan in every respect detrimental to their power and happiness. No European nation, it is evident from these allusionf, cver pleased them as well. The French character and manners ndapted themselves admirably to the existing customs of forest life. The common people, who went up into the interior to trade, fell in with their customs with a degree of plasticity and an air of gaiety and full assent, which no other foreigners have, ot least to the same extent, shown. These Couriers du Bois had not much to borst of on the score of rigid morals thenselves. They had nearly as much supersition as the wildest Indians. They were in fact, at least nine-tenths of them, quite as illiteratc. Very many of them were far inferior in their mental syructure and capacity to the bold, eloquent, and well formed and atbletic northern chiefs and hunters. They respected their religious and feative ceremonies. Thoy never, as a chief once told me, laughed at thenn. They met their old friends on their annual returns from Montrest, with a kiss. They took the danghters of the red men for wives, and reared large famities, who thus constituted a strong bond of union betreen the two races, which remains unbroken at this day.

This is the true secret of the strenuous efforts made by the northern and weatern Indians to sustain the French power, when it was menaced in the war of 1744, by the fleets and armies of Great Britain. They rallied freely to their aid at Detroit, Vincennes, the present sites of Pittsburg and Erie, at Fort Niagara, Montreal, and Quebec, and they hovered with infuriated zeal around the outskits of the northern and western sealements, during the many and sanguinary wars carried on between the English and French. And when the French were beaten they etill adhered to their cause, and their chiefs stimulated the French local commanders to continue and renew the contest, even after the fall of Niagara and Quebec, with a heroic consistency of purpose, which reflects credit upon their foresight, bravery, and constancy. We hope in a future number to bring forward a aketch of the man who put hirself at the head of this latter effor, who declared he would drive the Saxon race into the sea, who beseiged twelpe and took nine of the western rockaded forts, and who for four years and upwards, maintained the war, nfler the French had struck their colours and ceded the country. We refer to the great Algic leader, Pontiac.

At present our attention is called to a cotemporary chief, of equal personal hravery and conduct, certainly, hut who lived and exercised his authority at a more remote point, and had not the same masses and meana at his command. This point, so long hid in the great forests of the north, and which, indeed, has been hut lately revealed in our positive geography, is the area of Late Superior. It is here that we find the Indian uradition to be rife with the name of Wabojeeg and his wars, and his cotemporaries. It was one of the direct consequences of so remote a position, that it withdrew his attention more from the actual conflicts between the French and English, and fixed thern upon his western and southern frontiers, which were menaced and invaded by the numerous banda of the Dacotahs, and by the perfidions kinsmen of his nation, the Outagamies and Saucs. He came into active life, too, ns a prominent war leader, at the precise ere when the Canadas had fallen into tha British power, and by engaging zealously in the defence of the borders of his nation west, he allowed time to mitigate and adjust those feelings and atachments which, so far as public policy was concerned, must be considered to have moulded the Indian mind to a compliance with, and a submission to, the British authority. Wabojeeg was, amphatically, the defender of the Chippewn damain againa the efforts of other branches of the Red Race. He did not, therefore, lead bis people to fight, as his father, Ma-mongazida, and nearly aill the great Indian war captains had, to enuhle one type of the foreign race to triumph over another, hut raised his parties and led them forth to maintain his tribel bupremacy. He may be contemplated, therefore, as having had a more patriotic object for his achievement

Lake Superior, at the time of our earliest acquaintance with the region, was occupied, as it is at thia day, by the Chippewa race. The chief seat
of their power appeared to be near the southwestern extremity of the lake, at Chagoimegon, where fathers Marquette and Alioez found their way, and establiahed a mission, so early as 1668 . Another of their principai, and probably more ancient seats, was at the great rapids on the oulet of that lake, which they named the Sault de Ste. Marie. It was in allusion to their residence here that they called this tribe Saulteur, that is to say, people of the leap or rapid.

Indian tradition makes the Chippewas one of the chief, certainly by far the most numerous and widely spread, of the Algonquin stock proper. It represents thear to have migrated from the east to the west. On reaching the vicinity of Michilimackinac, they separated at a comparatively moderate era into three tribes, calling themsalves, respectively, Odjibwas, Odawas, and Podawadumees. What their name was before this era, is not known. It is manifest that the torm Odjibwa is not a very ancient one, for it does not occur in the earliest authors. They were probably of the Nipercinean or true Algonquin stock, and had taken the route of the Uta was river, from the SL Lawrence valley into hake Huron. The term isself is clearly from Bwa, a voice ; and isa prefix in Odji, was probably designed to mark a peculiar intonation which the mascles are, as it were, gathered $u p$, to denoke.

Whatever be the facts of their origin, they had taken the route up the straits of SL Mary into lake Superior, both sides of which, and far beyond, they occupied at the era of the French discovery. It is evident that their course in this direction muer have been aggressive. They were advancing wwards the west and northwest. The tribe known as Kenistonos, had passed through the Lake of the Woode, through the great lake Nipe sing, and as far as the heads of the Saskatchewins and the portage of the Missinipi of Hudson's bey. The warlike band of Leech Lake, called Mukundwa, had spread themseives over the entire sources of the Mississippi and extended their hunting excarsions west to Red River, whare they came into connact with the Assinaboines, or Stone Siour The centrml power, at this era, still remained at Chagoimegon, on Superior, where indoed, the force of early tradition asserts there was maintained something Like a frame of both civil and ecclesiastical polity and government
It is said in the traditions related to me hy the Chippewas, that the Ou tagamies, or Foxes, had preceded them into that particular section of country which extends in a general course from the head of Fox River, of Groen Bay, towards the Falls of St Anthony, reaching in some points well aigh to the borders of lake Superior. They are remembered to have occapied the interior wild rice lakes, which lie at the sources of the Wisconsin, the Ontonagon, the Chippewa, and the St. Croir rivers. They were ansociated with the Saucs, who had ascended the Missienippi some distance above the Falls of St Anthony, where they lived on friendly termes with the Dacotahs or Bioux. This friendship extended also to the Outagumies, and it was
the means of preserving a good understanding between the Dacotahe and Chippewas.

The Fox tribe is closely affiliated with the Chippewas. They call each other brothers. They are of the same general origin and speale the same genernl language, the chief difference in sound being that we Fores ase the letter l , where the Odjibwas employ an n . The particular cause of their disagreement is not known. They are said by the Chippewas to have been unfaithful and treacherous. Individual quarrels and trespasses on their hunling grounds led to murders, and in the end to a war, in which the Menomonees and the French united, and they were thus driven from the rice lakes and away from the Fox and upper Wisconsin. To maintain their position they formed an alliance with the Sioux, and fought by their side.

It wes in this contest that Wabojeeg first distinguished hiraself, and vindicated by bis bravery and address the former reputation of his family, and laid anew the foundations of his northern chieftaindom. Haviog heard allusions made to this person on my first entrance into that region, many years ago, I made particular enquiries, and found living a sister, an old white-headed woman, and a son and daughter, about the age of middle life. From these sources I gleaned the following facts. He was borm, as nearly as I could compute the time, about 1747. By a singular and romatic incident his fatber, Ma-mongazida, was a half-brother of the fatber of Wabashaw, a celebrated Sioux chief, who but a fetry years ago died at his village on the upper Mississippi. The connexion happened in this way.

White the Sioux and Chippewns were living in amity near each other, and frequently met and feasted cach other on their hunting grounds and at their villages, a Sioux chief, of distinction, admired and married a Chippewa girl, by whom he had two sons. When the war between these two nations broke out, those persons of the hostile tribes who had married Chippewa wives, and were living in the Chippewn country, withdrew, some taking their wives along and others separating from them. Among the later was the Sioux chief. He rerained a short time after hosilities commenced, but finding his position demanded it, he was compelled, with great reluctance, to leave his wife behind, as she could not, with safety, have accompanied him into the Sioux territories. As the blood of the Sioux flowed in the veins of her two sons, neither was it safe for her to leave them among the Chippewas. They were, however, by mutual agreement ellowed to return with the father. The eldest of these sons became the father of Wabashaw.

The mother thus divorced by the mutual coosent of all parties, remained inconsolable for some time. Sbe was still young and handsome, and after a few years, hecame the wife of a young Chippewa chief of Chagoimegon, of the honoured totem of the Addice or reindeer. Her
first child by this second marriage, was Ma Mongazida, the father of Wabojeeg. In this manoer, a connexion existed between two families, of separate hostile nations, each of which distinguished itself, for bravery and skill in war and council. It has already been slated that Ma Mongazida, was present, on the side of the French, in the great action in twhich both Montcalm aud Wolf fell, and he continued to exercise the chieflainship till his death, when his second son succeeded him.

It was one of the consequences of the hostility of the Indians to the English rule, that many of the remote tribes were left, for a time, without traders to supply their wants. This was the case, tradition asserts, with Chagoimegon, which, for two years after the taking of old Mackinoc, was left without a trader. To remonstrate against this, Ma Mongazida visited Sir William Johnson, the superintendant general of Indian affairs, by whom he was well received, and presented with a broad wampum helt and gorget. This act laid the foundation of a lasting pence between the Chippewas and the English. The belt, it is added, was of blue wampun, with fgures of white. And when Wabojeeg came to the chieftanship, he took from it the wampum employed by hitn to muster his watparies.

In making traditionary enquiries I have found that the Indinn narrators were careful to preserve and note any fact, in the early lives of their distinguished men, which appeared to prefigure their future eminence, or had any thing of the wonderful or premonitory, in ils character. The following incident of this sort, was noticed respecting this cbief. Ma Mongazida generally went to make his fall hunts on the middle grourds towords the Sioux territory, taking with him all his near relatives, amounting usually to twenty persons, exclusive of children. Early one morning while the young men were preparing for the chase, they were startled by the report of several shots, directed towards the lodge. As they had thought themselves in sccurity, the first emotion was surprise, and they had scarcely time to fly to their arms, when another volley was fired, which wounded one man in the thigh, and killed a dog. Ma Mongazida immediately sallied out with his young men, and pronouncing his name aloud in the Stoux language, demanded if Wabashn or his brother, were among the assailants. The firing instantly ceased-a pause ensued, when a tall figure, in a war dress, with a profusion of feathers upon his head, stepped forward and presented his hand. It was the elder Wabasha, his half brother. The Sioux peaceably followed their leader into the lodge, upon which they had, the moment before, directed their shots. At the instant the Sioux chief entered, it was necessary to stoop a little, in passing the door. In the act of stooping, he received a blow from a warclub wielded by a small boy, who had posted himself there for the purpose. It was the young Wabojecg. Wabasha, pleased with this carly indication of courage, took the little lad in his arms, caressed him, and
pronounced that he would become a brave man, and prove an invetarate enemy of the, Sioux.

The border warfare in which the father of the infant warrior was constantly engaged, early initiated him in the arts and ceremonies pertaining to war. With the eager interest and love of novehy of the young, he listened to theit war songs and war stories, and longed for the time when he would be old enough to join these parties, and also make himself a name among warriors. While quite a youth be volunteered to go out with a party, and soon gave convincing proofs of bia courage. He also early learned the aris of hunting the deer, the bear, the moose, and all the smaller animals common to the country; and in these pursuns, he cook the ordinary lessons of Indian young men, in abstinence, suflering, danger and endurance of fatigue. In this munner his nerves were knit and formed for activity, and his mind stored with those lessons of caution which are the result of local experience in the forest. He possessed a tall and commanding person, with a full black piercing eye, and the usual features of his countrymen. He had a clear and full toned voice, and spoke his native language with grace and fluency. To these attractions, he united an early reputation for hruvery and skill in the chase, and at the age of twenty two, he was already a war leader.

Expeditions of one Indian tribe agninst another, require the utmoat caution, skill, and secrecy. There are a hundred things to give information to such a party, or influence its action, whith are unknown to civilized nations. The breaking of a twig, the slightest impression of a foot print, and nther like circuastances, determine a hait, a retreat, or an advance. The most scrupulous attention is also paid to the signs of the beavens, the flight of birds, and above all, to the dreams and predictions of the jossakeed, priest, or prophet, who accompanics them, and who is entrusted with the sacred sack. The theory upon which all these parties are conducted, is secrecy and stratagem: to steal upon the eneny unawares; to lay in ambush, or decoy; to kill and to oyoid as much as possible the hazard of being killed. An intimate geographical knowledge of the country, is also required by a successful war leader, ond such a man piques himself, not only on knowing every prominent stream, hill, valley, wood, or rock, but the particular productions, animal, and vegetable, of the scene of operations. When it is considered that this species of knowledge, shrewdness and sagacity, is possessed on both sides, and that the nations at war watch each other, as a lynx for its prey, it may be conceived, that many of these border war parlies are either light skirmishes, sudden on-rushes, or utter failures. It is seldom that a close, well contested, long continued hard battle is fought. To kill a few men, tear off their scalps in haste, and retreat with these trophies, is a bruve and honourable trait with them, and may be boasted of, in their triumphal dances and warlike ferivities.

To glean the details of these movernents, would be to acquire the
modern bistory of the tribe, which induced me to direct my enquiries to the subject ; hut the lapse of even forty or fifty years, had shorn tradition of most of these details, and often left the memory of results only. The Chippewas told me, that this chief had led them seven tirmes to successful battle against the Siour and the Outagamies, and that he bad been wounded thrice-once in the thigh, once in the right shoulder, and n third time in the side and breast, being a glancing shot. His war parties consisted either of volunteers who had joined his standard at the war dance, or of auxiliaries, who had accepted his meseages of wampum and tobacco, and come forward in a body, to the appointed place of rendezrous These parties varied greatly in number; his firar party consisted of hut forty men, his grealest and most renowned, of three hundred, who were mustered from the villages on the shores of the lake, as far east as Bt Mary's falls.

It is to the incidenta of this late expedition, which had an important influence on the progrese of the war, that we may devote a few moments, The place of rendezvous was La Pointe Chagomiegon, or as it is called in modern drys, La Pointe of Lake Superior. The scene of the conflict, which was a long and bloody one, was the falls of the St. Croix. The wo places are distant about two hundred and fifty miles, by the most direct route. This area erabraces the summit land between Lake Superior and the upper Mississippi. The streams flowing each way interlock, which enahles the natives to ascend them in their light canoes, and efter carrying the latter over the portages, to descend on the opposite side. On this occasion Wabojeeg and his partizan army, ascended the Muskigo, or Mauvais river, to its connecting portage with the Namakagon branch of the St. Croir. On crossing the summit, they embarked in their small and light war canoes on their descent westward. This portion of the ronte was passed with the utmost caution. They were now rapidly approaching the enemy's borders, and every sign was regarded with deep attention. They were seven days from the time they first reached the waters of the St. Croir, until they found the enemy. They went but a short distance each day, and encarmped. Oo the evening of the seventh day, the scouts discovered a large body of Sioux and Outagamies encamped on the lower side of the portage of the great falls of the St. Croix. The diseovery was a surprise on both sides. The advance of the Chippewas had landed at the upper end of the portage, intending to encamp there. The Sioux and their allies had just preceded them, from the lower part of the strean with the same object. The Foxes or Outngamies immediately fred, and a batlle ensued. It is a spot indeed, from which a retreat either way is impracticable, in the face of an enemy. It is a mere neck of rugged rock The river forces a passage through this dark and solid barrier. It is equally rapid and dangerous for canoes above and below. It cannot be crossed direct After the firing began Wabojeeg landed and brought up
his men. He directed a part of them to extend themselves in the wood around the small neck, or peninsula, of the porage, whence alone escape was possible Both parties fought with bravery; the Foxes with desperation. But they were outnumbered, overpowered, and defeated. Some attempted to descend the rapids, and were lost. A few only escaped. But the Chippewas paid dearly for their victory. Wabojeeg wes slightly wounded in the breast: his brother was killed. Many brave warriors fell It was a most sanguinary scene. The tradition of this batle is one of the most prominent and wide spread of the events of their modern history. I heve conversed with more than one chief, who dated his first military honours in youth, to this scene. It put an end to their feud with the Foxes, who retired from the intermediate rice lakes, and fled down the Wisconsin. It raised the name of the Chippewa leader, to the acme of his renown among his people: but Wabojeeg, as humane as he was brave, grieved over the loss of his people who had fallen in the action. This feeling was expressed touchingly and characteristically, in a war song, which he uttered after this victory which has been preserved by the late Mr. Johnston of St. Mary's, in the following stanzas.

On that day when our hernes lay low-lay low, On that day when our heroes lay low, I fought by their side, and thought ere I died, Just vengeance to take on the foe, Just vengeance to take on the foe-

On that day, when our chieftains lay dead-lay dead, On that doy when our chieftains lay dead, I fought hand to hand, at the head of my band, And here, on my breast, have 1 bled, And here, on my breast, have I bled.

Our chiefs shall return no more-no more, Our chiefs shalt return no more,
Nor their brothers of war, who can show scar for scar, Like women their fates shali deplore-deplore, Like women their fate shall deplore.

Five winters in hunting we'll spend-we'll speod, Five winters in hunting we'll spend,
Till our youth, grown to men, we'll to war lead again, And our days, like our fathers, we'll end, And our days, like our fathers, we'll end.

It is the eustom of these tribes to go to war in the apring and sammer, which are, not only comparatively seasons of leisure with lhem.
but it is at these seasons that they are concealed and protected by the foliage of the forest, and can approach the enemy unseen. At these annual returns of warinth and vegetition, they also engage in feativities and dancea, during which the events and exploits of past years are sang and recited; and while they dcrive fresh courage and stimulus to renewed exertions, the young, who are listeners, learn to emulinte their fathers, and tuke their earliest lessons in the art of war. Nothing is done in the summer moaths in the way of hunting. The small furred onimals are changing their pelt, which is out of senson. The doe retires with her fawos, from the plains and open grounds, into thick woods. It is the general senson of reproduction, and the red man for a time, intermits his war on the animal creation, to resnme it against man.

As the autumn approaches, he prepares for his fall hunts, by retiring from the outskits of the settlements, and from the open lakes, shores, and strearas, which have been the scenes of his summer festivities; and proceeds, afler a short preparatory hunt, to his wintering grounds. This round of hunting, and of festivity and war, fills up the year ; all the tribee conform in these general customs. There are no war partics faised in the winter. This senson is exclusively devoted to securing the means of their subsistence and clothing, by seeking the valunble skins, which are to purchase their clothing and their ammunition, traps and arms.

The hunting grounds of the chief, whose life we are considering, extended along the southern shores of Lake Superior from the Montreal River, to the inlet of the Misacoda, or Burntwood River of Fond du Lac. If he ascended the one, he usually made the wide circuit iadicated, and came out at the other. He often penetrated by a central route up the Maskigo. This is a region still abonnding, but less so than formerly, in the bear, moose, beaver, otter, martin, and mnskrat. Among the smaller animals are also to be noticed the mink, lynx, hare, porcupine, and partridge, and towards ils southern and western limits, the Virginin deer. In this ample aree, the La I'ointe, or Chagoimegon Indians hunted. It is a rule of the chase, that each bunter bas a portion of the country assigned to him, on which be alone may hunt ; and there are conventional laws which decide all questions of right and priority in sarting and killing game. In these questions, the chief exercises a proper authority, and it is thus in the power of one of these forest governors and magistrates, where they happen to be inen of sound sense, judgment and manly independence, to make themselves felt and known, and to become true benefactors to their tribes. And such chiefs create an impression upon their followers, and leave a reputation behind them, which is of more value tban their achievements in war.

Wabojeeg excelled in both characters; he was equally popolar as a civil ruler and a war chief; and while he administered justica to his people, he was an expert hunter, and made due and ample provision for his
family. He usually gleaned, in a season, by his traps and carbine, four packs of mixed furs, the avails of which were ample to provide clothing for all the members of his lodge circle, as well as to reaew his supply of ammunition and other essential articles.

On one occasion, he had a singular contest with a moose. He had gone out, one morning early, to set martin traps. He had set about forty, and woa returning to his lodge, when he voexpectedly encountered a large moose, in his path, which manifested a disposition to attack him. Being unarmed, and having nothing bat a knife and small hatchet, which he had carried to make his traps, he tried to avoid it. But the animal came towards him in a furious manner. He took shelter behind a tree, shifing his position from tree to tree, retreating. At length, as he fled, he picked upa pole, and quickly untying his moccasin strings, he bound bis knife to the end of the pole. He then placed himself in a favournble position, behind a tree, and when the moose came up, stabbed him severnl times in the throat and breas. At last, the animal, exhausted with the loss of blood, fell. He then dispatched him, and cut out his tongue to carry home to his lodge as a trophy of victory. When they went back to the spot, for the carcass, they found the snow trampled down in a wide circle, and copiously sprinkled with blood, which gave it the appearance of a battle-field. It proved to be a male of uncommon size.

The domestic history of a native chief, can seidom be obtained. In the present instance, the facts that follow, may be regarded with interest, as having been obtained from residents of Chagoimegon, or from his descendants. He did not take a wife till about the age of thirty, and he then married a widow, by whom he had one son. He had obsined early notoriety as a warrior, which perhaps nbsorbed his attention. What causes there were to render this union unsatisfactory, or whether there were any, is not known; but after the lapse of two years, he married a girl of fourteen, of the totem of the benr, by whom he had a family of six children. He is represented as of a temper and manners affectionate and forbenting. He ewineed thoughtfulness and diligence in the management of his affairs, and the order and disposition of his lodge. When the huating season was over, he employed his leisure moments in adding to the comforts of his lodge. His lodge was of an oblong shape, ten fathoms long, and made by setting two rows of posts firmiy in the ground, and sheathing the sides and roof with the smooth bark of the birch. From the centre rose a post crowned with the carved figure of an owl, which he had probably selected as a bird of good omen, fur it was neither his own nor his wife's totem. This figure was so placed, that it turned with the wind, and answered the purpose of a weathercock.

In person Wabojeeg was tall, being six feet six inches, ereet in carringes
and of slender make. He possessed a commanding countenance, united to ease and dignity of manners. He was a ready and fluent speaker, and conducted personally the negotiations with the Fox and Sioux uations It was perhaps twenty years after the batlle on the St. Croix, which established the Chippewa boundary in that quarter, and while his children were still young, that there came to his village, in the capacity of a trader, a young gentleman of a respectable family in the north of Ireland, who formed an exalted notion of his character, bearing, end warlike exploits. This visit, and his consequent residence on the lake, during the winter, became an important era to the chief, and has linked his name and memory with numerous persons in civilized life. Mr. Johnston asked the northern chief for his youngest daughter. Englishman, he replied, my daughter is yet young, and you cannot take her as white men have too often taken our daughters. It will be time enough to think of complying with your request, when you return again to this lake in the summer. My daughter is my favourite child, and I cannot part with her, unless you will promise to acknowledge her by such ceremonies as white men use. You must ever keep her, and never forsake her. On this basis a union was formed, a union it may be said, between the Erse and Algonquin races-and it was faithfully adhered to, till his death, a period of thirtyseven years.

Wabojecg had impaired his health in the numerous war parties which he conducted across the wide surumit which separated his hunting grounds from the Mississippi valley. A slender frame, under a life of incessant exertion, brought on a premature decay. Consumption revealed itself at a comparatively carly age, and he fell before this insidious disease, in a few years, at the early age of about forty-five. He died in 1793 at his native village of Cbagoimegon.

The incident which has been named, did not fail to make the forest chieftain acquainted with the leading truth of Christianity, in the revelation it makes of a saviour for all races. On the contrary, it is a truth which was brought to his knowledge and explained. It is, of course, not known with what particular effects. As he saw his end approaching, he requested that his body might not be buried out of sight, but placed, according to a custom prevalent in the remoter bands of this tribe, on a form supported by posis, or a scaffold. This trait is, perhaps, natural to the hunter state.

My friends wben my spirit is fied—is fled
My friends when my spirit is fled,
Ah, put me not bound, in the dark and cold ground,
Where light shall no longer be shed-be shed,
Where day-light no more shall be ahed.

> But lay me up scaffolded high-all high,
> Chiefs lay me up scaffolded high,
> Where my tribe shall still say, as they point to my clay,
> He ne'er from the foe sought to fly-to fy,
> He ne'er from the foe sought to fy.
> And children, who play on the shore--the shore,
> And children who play on the shore,
> As the war dance they beat, my name shall repeat,
> And the fate of their chiefian deplore-deplore,
> And the fate of their chieftain deplore.

MODE OF WRTITG AN TNDLAN LANGUAGE.
The rales of utterance of these tribes, after all that has been said and writuen on the subject, are very sinple, and determine the orthography, so far, at leant, as relates to distinctions for the long and short vowels. If, in writing Indian, the syllables be separated by hyphens, there need be no uncertainty respecting their sounds, and wa shall be saved a world of somewhat over nice disquisition. A vowel preceded by a consonant, is always long, a vowel followed by a consonant is always short. A vowel between two consonants, is short A vowel suanding by itself is always full or long. A few examples of well known words will denote this,

| Ontat rio. | Wä bash. |
| :---: | :---: |
| Niag ara. | Peória |
| Owe go. | Tí con de róga. |
| Tis ga, | Mis siss ip pi. |
| Ot w6 go. | O neí do. |
| I'O-wi. | Al ab áan |
| Wis con'sin. | Otis co. |
| Chi cágo. | Or' e gon. |

Write the words by whatever syatem of orthography you will, French, English, or German, and the vorvel sounds will vindicate this distinction. If diphthongs have been used, for simple vowels, through early mistake or redundancy, the rule is the same. If they appear as proper diphthongs, they follow the rule of diphthongs. This principal of utterance appears to be a general and fixed law in the Indian languages as respects the sounds of $e, i, o, u$, and the two chief sounds of $a, 1$ and 3 of Walker's Key. As the letter a has four distinct sounds, as in English, the chief discrepancies, seen abeve, will eppear in the use of thin letter.

## AND <br> HIST0RY 0F THE RACE.

## TRADITIONS OF THE ARCTIDES.

There are some curious traditions related by the race of people living on that part of the continent lying north and west of Athabasca lake, and the river Unjigab. Mackenzie has described that branch of them, who are called by the trivial name of Che-pe-wyans. This is an Algonquin term, meaning puckered blankets, and has reference only to the mosa easterly and southerly division of the race. They are but the van of an ertensive race. All that gives identity to their general traditions, and dibtinetive character and language, relates as well to the Dogribs, the Coppermines, the Stronghows, the Ambawtawoots, the Hares, the Brashwoods, the Sursees, the Tacullies, the Nateotetains, and other tribes located north of them, extending to the Arctic Ocean, and west throagh the Peace river pass of the Rocky Mountins, Pbilology briags into one groupe all these dialects of a wide spread race, who extend from the borders of the Atnah nation on the Columbia, across the Rocky Mountains eastwardly to the Lake of the Hills and the Missinipi or Churchill river, covering many degrees of latitude and longitude. In the absence of any generic name for them, founded on language or character, I shall allode to them under the geographical phrase of Arctides.

This stock of people have proceeded from the direction of the North Pacific towards the Atlantic waters, in a general enstern direction, in which respect, their history forms a striking exception to the other great atocks of the eastcra part of the United Sutes, the Canadas, and Hudson's bay, who have becn in a continual progress towards the west and nortiwest. The Arctides, on the contrary, have proceeded enst and southeabt. They may be supposed, therefore, to hring their traditions more direcly from opposite portions of the continent, and from Asia, and it may be inferred, from more unmixed and primitive sources. Some of these tradjtions are, at least, of a curious and striking character. They believe, like the more southerly tribes, in the general tradition of a deluge, and of a paradise, or land of future bliss. They have apparently, veiled the Greas

Spirit, or creator of the globe, under the allegory of a gigantic birid. They believe, that there was originally nothing visible but one vast ocean. Upon this the bird descended from the sky, with a noise of his wings which produced sounds resembling thunder. The earth, as he alighted, immediately rose above the waters. This bird of creative power, then made all the classes of animals, who were made out of earth. They all had precedency to man. Man alone, the last in the series, was created from the integument of a dog. This, they believe, was their own origin, and hence, as Mackenzie tells us, they will not eat the fiesh of this animal, as is done by the other tribes of the continent. To guard and protect them, be tben made a magic arrow, which they were to preserve with great care, and hold sacred. But they were so thoughtiess, they add, as to carry it away and lose it, upon which the great bird took his flight, and has never since appeared. This magic arrow is doubtless to be regarded os a symbol of something else, which was very essential to their safety and happiness. Indian history is oflen disguised under such symbolic forms.

They have also a tradition that they originally came from a foraign country, which was inhabited by a wicked people. They had to cross a great lake, or water, which was shallow, narrow, and full of islands. Their track lay also through snow and ice, and they suffered miserably from cold. They first landed at the mouth of the Coppermine river. Tha earth thereabouts was then strewed with metallic copper, which has siace disappeared.

They believe that, in ancient times, men lived till their feet were worn out with walking, and their throats with cating. They represent their ancestors as living to very great ages. They describe a deluge, in which the waters spread over the whole earth, except the bighest mountains, on which their progenitors were saved.

Their notions of a future state coincide generally with the other stocks. Bat their paradise is elothed with more imaginative traits. Thoy believe, that at death they pass immediately to another world, where there is a large river of water to cross. They must embark in a stone canoe, and are borne along into a wide lake, which has an island in its centre. This is the island of the blest, and the object of the disembodied soul is to reach it. If their lives have been good, they will be fortunate, and make it. If bad, they will sink; but they will only sink to the depth of their chins, so that they may be permitted to behold the happy land, and strive in vain to reach it. Eternity is passed in this vain endeavour.

They have also some notion of the doctrine of transmigration. Such are the traditionary notions of this numerous family of the Red Race, which are sufficiently distinctive and peenliar,-and while they resemble in mady traits, yet in others they contradistinguish them from the great Algic race of the eastern part of the continent. The moet adranced

Wrash of these tribes in their geograghical position, coll themselves, an mapuriod by Capt. Franklin, People of the Rising Sun, or Saweesocedinsek
It seems singular, that the farther north we g 0 , the greater evidences do we behold of imagination, in the aboriginal race, together with some foreshadowings of future punishment.

## war song.

Where are my foes? say, warriors, where? No forest is so black, That it can hide from my quick eye, the vestige of their track:
There is no lake so boundleas, no path where man may go,
Can shield them from my sharp pursuit, or save them from my blow.
The winds that whisper in the trees, the clouds that spot the sky, Impart a sof intelligence, to show me where they lie, The very birds that sail the air, and scream as on they go, Give me a clue my course to tread, and lead me to the foe.

The sun, at dawn, lift up his head, to guide me on my way, The moon, at night, looks softly down, and cheers me with her ray.
The war-crowned stars, those beaming lights, my spirit casta at nigh,
Direct me ns I thread the maze, and lead me to the fight.
In sacred dreams within my lodge, while resting on the land,
Bright omens of success arise, and nerve my warlike hand.
Where'er I turn, where'er I go, there is a whispering sound, That tells me I shall crush the foe, and drive him from my ground.

The beaming wist invites me on, with smiles of vermil bue, And clouds of promise fill the sky, and deck its heavenly blue, There is no hreeze-there is no sign, in ocean, earth or sky, That does not swell my breat with hope, or animate my eye. If to the stormy beach I go, where heavy tempests play, They tell me hut, how warriors brave, should conquer in the fray. All nature fills my beart with fires, that prompt me on to go, To rush with rage, and lified spear, upon my country's foe.

It is certainly as easy, says Harris, the nuthor of "Hermes," to be a scholar us a gamester, or any other character equally illiberal and low. The same application, the same quantity of habit, will fil us for one as completely as for the other. And as to those who tell us, with an air of soeming wisdom, that it is men, and not books that we must study to become knowing ; this I bave always remarked, from repeated experience, to be the common consolation and language of dunces.

#  <br> OR <br> <br> THE RED RACE OF AMERICA. <br> <br> THE RED RACE OF AMERICA. <br> <br> PART SIXTH. 

 <br> <br> PART SIXTH.}

## SCENERY OF LAKE SUPERIOR.

Few portions of America can vie in scenic attractions with this interior sen Its size alone gives it all the elements of grandeur, but these have been beightened by the mountain mastes which nature bas piled along its shores. In some placea these massea consist of past wails of coarse grey or drah sandstone, placed horizontally until they have attained many hundred feet in height above the water. The action of such an immense liquid area, forced against these crumbling wails by terpessa, has caused wide and deep arches to be worn into the solid structure at their base, into which the billows rush with a noise resembling low pealing thander. By this means, large areas of the impending mass are at length undermined and precipitated into the lake, leaving the split and reat pars from which they have separated, stonding like huge misshapen turrets and batthements. Such is the varied coast called the Pictured Rocks.

At other points of the coast volcanic forces have operated, lifing up these level strata into positions nearly vertical, and leaving them to stand like the leaves of an open book. At the same time, the volcanic rocka sent up from below have risen in high mountain piles. Such is the condition of things at the Porcupine Mountains

The basin and bed of this lake act as a vast geological mortar, in which the masses of broken and fallen stones are whirled about and ground down, till ail the softer ones, such as the sand-stones, are brought into the state of pure yellow sand. This sand is driven ashore by the waves, where it is sboved up in long wreaths till dried by the sun. The winds now take it up and spread it inland, or pile it immedintely along the coast, where it presents itself in monntrin masses. Such are the great Sand Dunes of the Grande Sables.

There are yet other theatres of action for this sublime mas of intand
waters, where it has manifested perhaps still more strongly, if not so astri kingly, its abrasive powers. The whole force of the lake, under the impulse of a northwest tempest, is directed against prominent portions of the shore, which consist of the hlack and hard volcanic rocks. Solid as these are, the waves have found an entrance in veins of spar or minerals of safter structure, and have thus been led inland, and tora up large felds of amygdaloid and other rock, or left portions of them standing in rugged knoba or promontories. Sucb are the east and west coasts of the great peninsula of Keweena, which has recently become the theatre of mining operations

When the visitor to these remote and boundless watera comes to see this wide and varied scene of complicated attractions, he is absorbed in wonder and astonishment The eye, once introduced to this panorama of waters, is never done looking and admiring. Scene after seene, cliff after cliff island after island, and vista after vista are presented. One days' scenes are but the prelude to another, and when weeks and montha have been spent in picturesque rambles along is shores, the traveller has only to ascend some of its streams, and go inland, to find falls and cascades, and cataracts of the most beautiful or magnificent character. Go where he will, thete is something to atract him. Beneath his feet the pebbles are agates. The water is of the mast crystaline purity. The sky is filled at sunset with the most gorgeous piles of clouds. The air itelf is of the purest and moat inspiriting kind. To visit such a acene is to druw health from its purest fountains, and to revel in inteilectual delights.

These remarks are made to introduce the following letters, written by an iotelligent, modest, intellectual young man, a printer, who by way of recreation and to recruit his health, accompanied me on an expedition through this lake into the Indian country, in the summer of 1991 . They were addressed to friends of mine, who have permitted them to be used for this purpose There is a vividness and freshness about them which will repay their perusal. I remember seeing the writer siting on beaps of clean gravel on the shore, or perched on a rock, while he penned these letters, on the spur of the moment, to be sent back to St. Mary's, hy some returning trader or Indian canoe. His sudden death, the following year, in the cily of New York, was deeply regretted; and the letters, while they will afford plensure in their perusal, are offered, at the same time, as a filing memento to his memory.

## Granise Point, Lake Superior, July 3, 1831.

EGTEEIED FBIEND.
While looking over the Life of Dr. Payoon, at your house, I was plessed with a remarts of his, in which he says "that a formal leter to a friend is like 'Madam, I bope I have the pleasure to see you in good heallh,' ad-
dressed by a son to his mother, after a yeark absence." These may not be the exact words, but they convey the sentiment Had I the disposition to write to you such a leller, the circumstances of my gituation would most effectually preclude its gratification.

One week bas now elapsed, since we were climbing the rugged sides of the Iroquois mountain, and together gazing upon the peaceful lake, whose waters reposed in quietness at its base. During that week you may well imagine that scenes have passed before me, as diverse and varied in interest and excitement, as the vicissitudes of human life. We have glided over the limpid waterg of the Superior, when its broad surface lay stretched out before us with all the placidity of a polished mirror, and anon our slender larks have been cossed like a feather upon the rushing billows. We have rambled along the sandy beach or the gravelled shore, or bounded from rock to rock in search of new objects of attraction. We have ascended the sliding sanda of the Grande Sable; viewed with admiation and awe the variegated walls of the Pictured Rocks; passed under the Doric's arches, and scaled its summit ; and last, but not least, climbed a weary way up the Mountain of the Breast But I sbail not be thanked for filling up my sheet with such general observations.

Very little of interest is to be found upon the coast from Point Iroquois to the Grande Marais. Nothing but a continuous sandy beach meets the eye, which at length becomes tedious in the extreme. At the Grande Marais, however, the scene changes. Here the lofty mountains of Sable commence, which, in themselves, are sufficient to occupy the miod until new wonders are presented. Mr. Johnston and myself, accompanied by two of the Indian lads, ascended them near the beginning of the range. Upon arriving al the summit, the prospect was at once impressive and sublime. Behind us was the Superior, bounded but by the horizon-before us a gigantic amphicheatre, whose walls on either side rase into the magnitude of mountains. We descended into the area, and it was one in which the Olyrapian combatants would have delighted to wage their conteata for a false and short-lived fame. It was early when we embarked, and being iovigorated by the night's repose, we felt inclined, despite fatigue, to make a survey of all that might prove interesting. Passing on, we found that the winds had disposed of the sand alternately in hille and velleys. Nothing but an arid waste met the eye, except when here and there a hardy plant had reared its head above the yellow surface, or a little islet oasis of green was observed on a hillock's side, struggling with surrounding desolation. Being informed that a amall lake lay beyond the Grande Sables, we immediately resolved apon paying it a visit The distance we had to traverse was about a mile, and as we wound our way along, I involuntarily drew the comparison between the journey of life and our morning's excursion. How true is it that the great portion of our existence in this world, is filled up with events that hut leave the
moul in biterness, while at times some bright flower, some sunay spot will appear, to which memory can recur with pleasure, and draw new hopes cor the future. How raiserable the condition of thase whase ideas of happiness are bounded by present enjoyment; to them, futurity appears a something gloomy and undefinable, the very thoughts of which are unwelcome. But the Christian can look into a world beyond the grave, and the vista, like the green forest around this rinisture Zahera, is pleasant to the sight And even here, although bis course may be over a desert, yet every bud of promise, every opening flower, serve bat as a source of new exciternent, and from them he gathere strength to press his onward march amid the many thorns that beset his path. But ero I had coneluded moralizing, upon gaining the top of a sand hill, a scene opened to the viem of the most romantic beauty. Unconsciously I stopped, lest I should too soon rush upon a prospect of such quiet loveliness. We had passed over a desert, whose only attrection consisted in the novelty of iv character and the majesty of its outline, but the repetition of its barrennexa began to pall upon the sight, and oppress the mind with a sensation of weariness, when instantly the entire scene was changed. Instead of aterile heights, every thing bloomed in the vigor and freshness of vegetation. The forest resounded with "the sweet notes of the summer birds," and as the cye sought for the merry warblere, it canght a glimpse of the blue water as its ripples sparkled in the morning sun. My hesitation was but for a moment, and bounding down the precipitous sand hills, the isolated lake, that seemed to exult in its wild solitude, with its richly diversified and picturesque enclosures, were spread before me. $O$, it was a scene that the poet and the painter would love to dwell upon. Cold must be the hearh ungrateful the affections of that being, who, blessed with intedligence, can behold the frirest of Nature's works, and not adore the God of narure. My fancy might have been bighly wrought, but it ell appeared more like a pleasant dream that fills the mind, when slumber steals over the sensess as we are thinking upon abseat friends, and the haunts of happy hours.

The lake itaelf is aboot nine miles in circumference, and in general form, as near as a comparison can be made, renembles a heart The shores are deeply indented and irregular, now projecting into the wator in small semi-circular promontories, and again retiring, as if half afraid of the embraces of the limpid element On the south and wesh, as far as the eye can reach, the land rises into mountainous elevations; on the north, etands the lofty sand banks, affording a fine contrast with the fertility around, while on the east it is bounded by lower grounds, that in one instance descend to a beautiful graser lawn. The water appears to be very deep, and as we sent a shout over its surface, we were answered by a starled water fowl, that seldom, very seldom, hears the souod of a human voice in its wild retreat Every thing seemed to conspire to render thia
one of the most enchanting spots in nature, and it wes with regret that we turned to regain our cance.
Such is Lake Leelinau; and while the breeze that moved over its waters sent its waves to my feet, I thought of the friend after whom I named it, and from my heart wished that her life might be as calm and joyous as the bright prospect before me. By that name it thall be known, and if this faint description of the beanties it unfolds will serve to beguile a passing noment, a double object will have been achieved.

As we hurried along on our relurn, George pointed out to me the fairy tracks that occasionally are seen on these bills. They were, in fact, exact representations of the print of the homan foot, and about the size of your Chinese lady's. But alas! how unpoetical; we were forced to come to the conclusion that our fairy was nothing more than a porcupine. Although the 30th of June, we stopped at a snow bank, and after indulging for a moment in a winter's sport, filled one of our Indian's hats with specimens for Mr. S. We travelled over nearly four miles of these sandy mountains. Their summih, near the lake, is covered with pehbles, among which I found several carnelians.

It was nearly six o'clock when we descended to our canoes, and the thought crossed my mind that probably our friends at SL Mary's were be ginning to shake the poppies from their eyes, and seriousiy think of taking a peep at the sunny sky. At eight we landed to breakfint, and need I tell you that consumption presided at the board. Not the arch fiend with the bright, though sunken eye, the hectic cough, and the delicate, but deathboding unt, but a consumption that caused the solid viands before us to disappear with a marvellous quickness.

But to ensure the pcrusal of any future production, I must tax your patience no farther now. Suffico it to say that the farther I advance, the better am I pleased with the tour I have undertaien. Let the issue be what it may, the commencement has introduced to me a friend whom I shall never forget May the blessing of the Christian's God attend you.

MELANCTHON L. WOOLSEY.
To Mrs.

## Lake Superior, July 5, 1831.

MY DEAR ——.
It was my intention to have had a letter for you in readiness to send by Mr. Aikin, but we met birn sconer than we expected, and I was obliged to postpone the fulfilment of my promise until the Indian boys returned.

In my letter to Mrs. S., I conducted her as far as Lake Leelinau. Supposing that an account of our further progress would be as acceptable as any thing I can write, I will give you an invitation to a seat in our canoe, as we depart for the Pictured Rocks. These you have often heard do-
scribed, and nothing can be added by my poor pen to what has already been said about thera. They were all, and more than an excited imaginalion had conceived them to be. As we appraach them, the mind is struck with awe at their lofyy ballements, and in comparison, the most stupendous of the works of art sink into insignificance. Near their commencement, a beautiful cascade comes tumbling down the rocks, and finally makes a leap of about thirty feet into the waters below. Passing on from this, we soon come to a most singular arrangement of rocks and arches; and the first thought that atrikes the mind is, to ascend and give them an examinntion. It is the work but of a moment for the eye is unsatisfied until it has drunk in all the wonders before it Our first resting place was under the main arch, from which we had a bird's-eye view of the world of woods, and waters, and rocks, by which we were surrounded. While here, Mr. Clary, with his barge, came along, and jumping upon the rocks, he soon made one of our party, when we commenced a minute examination of the celebrated Doric Rock. The priacipal arch, under which we were, is about twenty feet in height; and while slanding under its crumbling walls, our sensations were not lessened by the idea that in an instant in might be suid of us, wee had been. At our leff, and in the centre of one of the large pillars, onother arch is formed; upon entering this we still find one more at our right, and which commands a view of the lake. Between the two stands a pillar of stones, near four feet in height, entircly detatched at the sides, and composed of thin plates of sand-rock. As we go out from these, for the purpose of ascending the roof, a large urn of naturo's own design and workmanship appears before us. It might be a fit depository for the ashes of some of those mighty men, who, before the children "with a while, white face," overran their country, strode through these forests, or, in their light canoes bounded over these vast waters; but alas! their graves, and those of their fathers, are mingling with the common dust Near this urn are the remains of an Indian's fire, which he had lighted at the close of his fast when propitiating his Manito; a place well calculated to foster the wildness of superstition, and which, to a mind more enlightened than that of the poor wanderer of the wilderness, would uot be deficient in suggestions of mystery. Who can wonder that the untaught natives of a region like this should make to themselves a deity in the rushing stream, or the beetling cliff? They act from the impulse of nature; and well will it be for those who enjoy every advantage that civilization and Christianity cau bestow, if when weighed in the balance, even with the pagan Indian, they are not found wanting. We were soon at the top of the Doric Rock, and from its dizzy height the prospect was such as to preclude all attempt at deliueation, at least by language. Your brother expressed his emotion as well as it was in the power of any mortal to do. Clapping his hands together, and puting a peculiar emphasis upon the last syllable, he exclaimed "Oh! Oh p" Nothing more
could be said. But while enjoying the grandeur of the scene, I wished that M—, was at my side, for my pleasure would have been increased ten-fold by sharing it with her. The summit of the arch is itself a curiosity. It does not appear to be more than three feet in thickness, and yet it supports and nourishes several lofty pine trees, whose weight alone I should think would crush it to atoms. The root of one of them winds around the outer edge of the rock, as if to support the source of its existence. But we had not long to indulge our admitation, for our table was spread under the shade of one of these immense rocks, and all the sublimity around us could not satisfy the imperious demands of appetite; so afier reguling ourselves on some of the dainties furnished by our excellent friends at the Sault, we departed to behold new wonders, and utter repeated exclamations of, Oh! Oh! Turning a point of the rocks, ws came in view of those natural excavations that have excited so much astonishment. It was our intention to pass through one of them, but the entrance was blocked up by the falling of an arch, the ruins of which were scattered around. We were obliged to content ourseives with an outside view, but this surpaseed every thing of the kind I had before seen. We were in a bay formed by a semi-circle in the rocks. A bove us the cliff, at the height of upwards of a hundred feet, projected far beyond our canoes, and formed a canopy of the mast terrific description. We could not behold it without a shudder of awe. Upon leaving it we discharged our gun, and the reverherations were almost deafening. The sound rolled through these vast ramparts, and seemed to shake them to their foundations. It was like the groaning of an imprisoned spirit in its atruggle to be free. At every stage of our progress we had new cause for amazement, and when we left them it was with the impression that we "ne'er should look upon their like again." Our encampment was at Grand Island. The next day we reached the Riviere des Moine; here we pitched our tents, and immediately commenced a search for some of the precious minernls. The locality proved so interesting that it was determined we should devote a day or two to its examination. For the first time we were compelled to resor to our musquito hars, and it afforded me infinite amusement upon waking in the morning, to see about fifty of these insects puzzling their brains to discover the meaning of certain initials that secmed to attract their attention. We removed our encampment this day four miles. In so doing we passed a rocky mountain that filled us instantly with a desire to ascend to its summit. This was resolved on, and at five in the afternoon we procured an Indian guide, and were soon clinging to the roots and branches that overhung its precipitous sides, as we scrambled up the ascent. We were emply repaid for our fatigue by the prospect from its peak. Immediately before us was a heautiful bay, studded with numerous islands, some of which were crowned with verdure, while others were immense masses of rock. The bay was formed hy the
projections of Granite Point and Presque Lale, both of which terminated in circular mountainous elevations that were connected to the main land, but by very narrow ishmuses. At the distance of fifty miles were seen Grand Island and the Pictured Rocks. To the northwest are seen seven large bay, and Point Kewena, from which we are 65 miles distant In the back ground mountain rises on mountain as far as the eye can reach. Here and there, to add variety to the seene, a lofty peak of massy; naked granite rears its head high above its less aspiring neighbors, and to soften the esperity of the view, there are two beauiful open spots of level green, that might be taken for fairy play grounds ; so secluded and so environed, that even the spirits of the air in them could find a resting place And think you not when my eyes were gazing at the splcador of this scene, glowing as it was in the last rays of a glorious sunset, that my mind wandered to the Being who is the author of these creations.

When we have occasionally met the traders, as they were returning from their years' residence among the Indians, I have asked myself what mysterious excitement there could be in the spirit of guin, that will cause men to separate themselves from society, and voluntarily renounce those privileges incident to an iatercourse with the world. But as I. pass along my wonder ceases. There is such an union of beauty and grandeur in all the works of nature throughout this region, that it is impossible to be acquainted with them, and not wish to pass a life in their admination. Following the impulse of my present feelings, I could joyfully make my home among these hills and valleys, and I should want no ocher. 'Tis true the busy hum of men would not reach such a wild retreat, neither would their faithlessness and coid deceih

And now let me tell you how I have written this letter. We are waiting at the Kewena Bay, for the arrival of some Indians to trensport port of our baggage to the Ontonagon. Mr. S. and Mr. Houghton, with L. Clary, are, by tbis time, over the traverse. It was uncertain how soon we might be able to embark, but I resolved to dcvote what time I had to you. Accordingly, at 5 o'clock this morning, I turned a chest upside down for a deak, planted myself against the tent pole, and, with the stump of a pen, commenced operations. But alas, the sand flies and musquitoes made such a desperate onset, that I was obliged to haul down my colors, and ingloriously fy for my life. I then waited until after breakfust, and commenced again with no better success. I then resorted to the open air, and placing my paper on a small hank, and standing on the stones below, with the sun at $90^{\circ}$, pouring its rays upon my head, while with one band, and sometimes two, I battled insects of divers descriptions, at last have made llack marks over the greater part of this sheet. Should yott, in decyphering these hyeroglyphics, come to any place where the subject was suddenly dropped and another commenced, without any apology, attribute it to a buge horse fly, which, lighting on my nasal profuberance, caused me
to drop my pen, and with it my idens. But here come a dozen of them; so grod bye till you hear from me again.

M. L WOOLSEY.

To Miss _...

## La Pointe, Lake Superior, July 17, 1831.

MT DEAR FRIEND,
Instead of a sand bank for a writing desk, I am now seated by the side of a good table in your brother's house, and surrounded by comforts and conveniences that would be no discredit to a place less out of the world than La Pointe. We have lusuries that even the inhabitants of St. Mary's might envy. Our table groans beneath its load of white fisb and trout, veal and pigeons, rice puddings and strawberries; all of which are served up a-la-mode, in Joseph's best syle, assisted by the culinary skili of Plufe the cook. We at present adopt the maxim, "Live while you may," for we well know that soon we will be out of the reach of every tbing of this sort, and be glad to get our dish nf corn soutp. Tbis is a very pleasant island, and presents quite a village-like appearance. There are several large dwelling bouses, besides the trading establishment; and cultivated fields, with cattle strolling nbout, that altogether make up a scene quite different from any thing I expected to see before arriving at Green Bay.

Since my first and last letter to you, we have passed through a variety of interesting incidents. As I closed my letter our Indians arrived, and in a shorl time we were on our way across the Kewepa traverse. But now a fresh breeze had supplanted the calm atmosphere of the morning, and before we were balf way over the bay we began to anticipate a second edition of the troubles and danger experienced by Mr. S. in 1820. But we fortunately escaped, with no inconvenience but a slight wetting, and at 12 at night came up to the encampment of our friends, when not wishing to disturb them, we spread out blankets upon the gravel, with the heavens for our canopy, and sought a few hours repose, previous to commencing an examination of Kewena Point. In this we promised oursefves an abundance of interest, and we suffered no disappointment Such a banging the rocks hare not experienced for many $a$ day, and we robbed them of no inconsiderable quantity of their precious contents. The " King of the metals" will be under the necessity of holding another convention," and if some of the delegates do not appear with battered visages and broken bones, then there is no virtue in our well tried hammers. Now you know, as we go skipping down the vale of life, that it is not every circurnstance that assumes a serious cast, but that we have a mixture, or a kind of dish which in Scotland, and by Dr. Johnson, would be called
hodge podge. So with us. After wearying ourselves in discovering copper mines, and hunting from their dark and stony enclosures the precious gems which here abounded, we would join with no liule zest in the pleasures of the chase. One or two opportunities of doing this occurred while going round this Poine This was in the pursuit of gracks; and impelled by the purest patriotisth, we were determined upon the extirpation of all that might fall in our way. What, ask you, is it possible that the proscribed prescribers of " roots and herbs," and steam restoratives, have found their way to the lone regions of the north? Why no, not exaclly this kind of quacks, but a species more honest, who tell us before hand what they are, and which, of themselves, when properly prepared by a suitable apothecary, form an excellent remedy for a well known disease, and which those in particular are apt to contract who labour for hours together among rocks and over mountains. But to tell a plain story: while in our canoes we surprised several large broods of ducks, which bappened to be in that state when their unfledged wings forbade them to fly, but when they were sufficiently large to furnish excellent game for the table. Consequently it was a trial of skill between our canoe-men mod the poor quacklings, to sec who could paddle the fastest, but like the boys and the frogs, while it was sport to the former it was death to the litter. Although at first they literally walked over the water, yet their strength was soon exbausted, and what with the shouts of the men, which of themselves were sufficient to scare a duck out of its senses, and their own fatigue, they fell an easy prey to their enemies. But to secure the victims after they were run down afforded us the most amusement The men seemed to have given up their whole souls to the chase, and as the ducks would dive to escape being taken, they would endeavour to spear them with their poles and paddles, and these proving ineffectual, plunge in themselves, regardless of the consequences. 'Their zeal was rewarded by the caplure of twelve or fifteen of the unfortunate birds. The only fear I experienced during this enliveniog scene was that the Doctor would exhaust his stock of risibility, and in future we should be deprived of his hearty ha, ba! that makes one join in sympathy with him before the story comes. He surrendered himself entirely to the power of Momus, but we have had abundant demonstration since that he is atill a subject of the laughing deity. But the aficrpiece was the most interesting to us individually; what that was you must guess. But luckily the clouds now "began to gather blnckness," and before we had proceeded many miles we were favored with a couple of smart showers, and finally ohliged by the rain to go on shore. Luckily, because this spot proved to be the richest in micerals and metals that we had yet visited. Your brother difcovered two rich veins of copper ore, and we found agates and othar gems in quantities. While we were thumping about us, the Doctor got into the canoe for the purpese of seeking an encarnping place. This was
found at the bottom of a very pretty bay, but which nevertheless we dignifiod with the name of Musquito Cove. Here we were wind-bound, and I spent a half-hour very pleasantly on the rocks, witnessing the foaming and dashing of the waves, that seemed enraged at the resistance which they met, while the rocks themselves groaned at the rencounter, as if fearful of being sbaken from their solid foundations. Here was a pince for melancholy, and a mind like yours would have held a revelry with the wildneas of the scene. My curiosity to witness the onset of the waters prompted me to venture too near them, as I found by a salute, not very friendly, that left me in rather a moist condition ; but although experience is the best school, yet forgetting myself I was again reminded that being but a spectator it would be well to retire from the influence of the batule shock. This was so pleasing that I felt no disposition to quit it, and continued my way over the rocks, until weariness alone induced me to return. My path was through a pleasant wood, and as I was loitering along I was startled by the report of a gun, repeated three or four times in quick succession, and upon making up to the place from wheoce the sound proceeded, found that two of the men had been sent out to search for the supposed lost one. The wind had abated, and we left our camp as the sun began to creep below the horizon. The rest of my story I hope to have the pleasure of communicating to you by word of mouth.

You will not probably hear from us again untid our arrival at the Saulh. In the moan time remember me to William, and the young gentemen of your household.

M. L WOOLSEY.

## RELUCTAFCE TO TELL NAMES,

Indian children are tanght by their mothers to forbear telling their names, by being told that if they impart their names to strangers they will never grow to be men and women. This has a powerful influence, but the real cause of the advice is still hid from them, nad is very difficult to explain. It seems probable that it is caused by a fear of offending those personal gods whom they have taken for their protectors, or after whom they have been named. A name is often the result of a dream. Dreams are deemed to be revelations, and are held sacred.

In The Creeks have passed a law expeling all white men from the limits of the aation, who play at cards, whether they have Indinn wives or nol

## EDUCATION OF THE INDIAN RACE.

## 4 PAFRR OEIGLAMLY WETFRA FOL TRE AMERICAN LTCEUM, 1834.

Whatever traits of the Indian character may be aingled out as favouring their advance, the inquiry still returns upon us: how can those points which best betoken the possession of a capacity to rise, be most advanta. geously improved? What is the beat mode of educating them, and of introducing civilization and Christianity?

Knowledge, to be attractive to the Indian tribes, mast possess a dccidedly practical character. All the sources of their moral depression, are such as are peculiar to the earliest stages of society. Their wants, both intellectual and physical, are the primary wants. Most of them are of the most simple and obvious kind; they are the wants of a hunter, a fisherman, a wanderer of the forest-a man without a house, without catle, without agriculture. These are only in danger of heing lost sight of, by straining after some great and sudden efforts to remodel the internal constitution of their society-to produce effects in a brief period which demand a long one-to make, as it were, the red man, a white man, in a day. History gives us very litle reason to suppose that such changes, or any permaneotly beneficial changes, will happen, by any other, but the patient and faithful application of the common ineans. To read and to write, to build and to plant, household economy, domestic comfort and order, temperance and assiduity, dress and address, are among the chief elemeots of civilization and civil knowledge. And this knowledge may be deemed es a series, which begins in the profoundest condition of ignorance and berbarism, and terminates in the most polished state of moral refinement.

To depart one step from the former, is to take one step towards the Latter. To abandon the temporary lodge, to throw aside the blanket, to discontinue the use of paints, are as certain indications of incipient civilization, as it unquestionably is, at a more advanced stage, to substitute alphabetical for heiroglyphic signs, or machine for hand labour. It is something to gain one influential man to the side of industry, good order, and thovart. The example of consistent individuals in a tribe, will become the means of influencing communities. If we can convince them of the superiority of agriculture over mere gardening, of grazing over bunting, of pacific over warlike achievements, of written over oral laws, of temperance over intemperance, of industry over inanity, we have gained so many points in their positive reformation. It will then become easier to convince them that true independence consists in a life of self oxertion, that it is dishonoarable to bo lazy, and infamous to be dishonest.

The Indian must abandon his lodge, and live in a house; he must throw off the blanket, and put on a coat. He muet cast away moccasins and wear thoes. He must put off his feathers and wear a hat. Externals are important to him.

Other truths lie in the direct train of these improvements, and are inseperable from them, such as relate to the varied economy of life, the reciprocal duties of society, and the principles of government. To assent to these truths, and to adopt them in practice, cannot it is conceived, be occurrencea very widely separated in point of time. But in order to the indion mind's giving this assent, in the true sense, there must be such a previous understanding, appreciation and application of moral truths, as is cotally irreconcilable with the condition of Indians living in an idolatrous and unregenerate state.

Hence, there is a atill higher and nobler duty-the duty of preparing the Iddian mind for giving tbis assent. And it js one which is conceived to be alike easential to the commencement and to the completion of their morelelevation. It is not only deemed a point of primary importance ta teach them their true relation to civilized communities, and to each other, and the principles which lead such communities to rise and fall in the scale of wealth and power; but a little reflection must muke it manifest, that they should, at the same time, be waght the solemn and important relation, in which the volume of inspiration places them, with respect to the Author of their existence. Christianity is applicable to berbarism. Else Paul knew nothing of it

By imparting this light at the commencement of their career of civilizacion, they will be enabled to take a view of the whole ground of their responsibilities. And to see whether it is worth their while to commence a moral race, the rewards of victorious competitorship in which are fully held up, and displsyed to their view. If this paramount obligation can be impressed on their minds, while they exist in the slate of hunters and warriors, they will be placed in a position, in which they can the more readily judge whether a continuaces in these pursuits, whoily or in part, or the adoption of civilized modes of industry, wholly or in part, will best gubserve the fuldilment of the whole circle of their obligations. And, if there be no error in this conclusion, they will thus be led to esteem industry, and the acquisition of property aod education, as means essential to the attainment of an end, and not, as they are otherwise apt to become, the end iself. They will not mistake civilization for Christianity.

Christianity everywhere inculcates order, obedience, wisdom and virtue. Its order, educed from chaos, as depicted in Genesis, leads the mind through an infinite and connected series of beatiful creations of both animate and inanimate classes, from "nature up to nature's God." And its maxims of obedience, wisdom and virtue, are the most perfect and sublime to which the human intellect can refer. An In:ian can be made to com-
prehend these trutbs, as displayed in the Bible. Considered merely as a code of morals, and were there no futurity to test their immutability, the maxims of Christianity, which he can be taughs will produce the greates amount of happiness to families, and to communities. They are so interwoven in their practical application with the duties and relations of life, and evince so intimate a knowledge of human nature, that they are found to be adapted to all periods and states of human life. Cannot an Indian be made to uoderstand them? They form a system which applics to man in the forest, as well as the field, in the wigwam as well as the palace, in his infancy and in his age; in his weakness and in his strength; in his joy and io his sorrow; in his life and in his death. Has not an indian feelings? Can he not be acted on by hope and fear 2-It is the admiration of this system, that it is equally applicable to every condition of society. The governor and the subject, the master and the servant, the parent and the child, the rich and the poor, the wise and the ignorant, are placed on an equality of faith. Science and learning, splendour and penury, lose their distinctions before the two-edged sword of its requisitions. It considers all as subject to its laws. It deems all capable of obeying them. It prescribes no standard of art, or book knowledge. It looks to do decessary amount of human athainment in the occupations or rank of life. Felix, trembling before the moral majesty of Paul, or Tinda quailing under the denunciations of Brainerd are equally just demonstrations of its applicability and power. To love, and to hate, are the ends of its requirement. And these are exercises of the affections, at the command of every rational being, savage or civilized. All its promises, all itw denunciations; all the inducements it holds out to obedience, all its solemn threatenings of disobedience, are equally addressed to the "Jew and the gentile, the bond and tha free." Were it not so-if truth could disprove one of its precepts; if justice could point out any portion of the human farnily who were exempl from its laws; or if any candid interprelation of language could be made, tending to invalidate its obligations, then the exhibition of this single truth, so established to be a truth, would be, in effect, to knock the key stone from the Christinn's temple, and turnble the the whole superstructure in splendid fragments. Who shall say the Red man is not born to an inheritance with the other members of tho family? Who shall deny his right? What scripture teaches it?
If these positions be correct, then it is an object of the bighest moment with all who purpose to better the condition of the Indians, to begin their labours hy the introduction of Christianity. This should be the corner stone. We are not willing to stop here. It should also cement the materials of the whole edifice. And it should constitute the capitals and ornamenta of its final finish. Without it, there may indeed, be a pseudo civilization. Several of the states of antiquity are pronounced to have been eminently civilized hefore the Cbristian era. But we are inclined to
think it was the civilization of the head, rather than the heart. Body and mind were brought to unite their aid in this effort. Sculpture, painting, and architecture, were carried to their highest pitch. All the arts, which requite great physical skill were successfully cultivated. Hissory and poetry were noexcelled. But they owed no part of their excellence to the virtues of sociely. Viewed in the era of jts highest refinements, it was corrupt to the core. Profigacy, revenge, and refined error, in morals and philosophy, were its striking characteristics. There was an utter destitution of moral loveliness. And we cannot select an era in ancient history which will bear the scrutinizing glare of biblical truth. The very higheas efforts of Greece and Rome were made in times of the greatest moral lassitude, affording proof that while the mind was disciplined for its most ex. traordinary achievements, and while the taste was cultivated, and the manners refined, the affections of the heart, like an uncaged lion, were left to rage in all their native fury. We merely allude to chis species of civilization for the purpose of pointing out ins enormities. And to illustrate the position, that mere civilization of manners, and changes of philosophical opinions, will not, as a necessary consequence, produce Christanity, although they may alike precede or fullow it. While we may confidently appeal to history to sbow, that the introduction of the Gospel among the rudest naLions, has without producing luxury, been attended by an almost immediate reformation of manners and a resort to the arts of civilization.

We are a ware that we are trenching on disputed ground, and that many have entertained a different theory respecting the Indian race. By these, Christianity has been deemed the peculiar growth of a more ad vanced period of ettainment It has been deemed necessary first to learn to build and sow, and then to learn to pray. It has been regarded, so to say, as the fruit rather than the seed of civilization. We believe this opinion to be unsound, as a practicable maxim. We do not know that the church of Christ, has, at any period of its history, had doubts reapecting the perfect applicability of the gospel to uncivilized nationa Paul had none. The Moravians had none, when they entered the missionary fields of India and Greenland. Elliot had none. Brainerd and Martyn bad none. And whatever of doubt there may still rest on the minds of candid inquirera after truth, on this point, the history and progress of missions, in our day, and in our own land, furniahes a triumphant answer on the subject The sublime experiment of Owyhee alone, senles the question. They found the true God first, and all else followed.

So far as my own observation has gone on the American frontiers, I feel impelled by the force of facts to affirm, that, as a general axiom, Christianity must be regarded as the precursor of civilization. That with the Red man, as with the White, it is a cause, and not an effect. And that if the action of these appear to be often reciprocal, such reciprocity is, to human view, the result of a belief, and a condition of the affections, which
may nevertheless be exercised by individuals the most rude and nomadic in their habits. Were the reverse true-were not uncultivated and hunter nations susceptible to gospel impressions in their wild and erratic state, the whole missionary effort of modern days, would be either a labour of almost endless duration, or an utter failure. Millions might be shown to be required to make a Christian. Gold would usurp the office and place of prayer, and no small part of the word of God itself, must be regarded as a toul mistransintion.

The field of missionary latour among the American tribes is a very extensive one, and is daily acquiring a new interest. The claims of the Indians, on the one hand; and the duties of an enlightened population on the other, are begianing to be more fully appreciated. The American church in all its vital branches is zealously alive on the subject. But it is a miscake to suppose that they alone are responsible for the faithful performance of this duty. Much of it indeed rests officially upon the churches and the ministry. But there is nothing, in a candid examination of truth, to exonerate any portions of community from the exercise of an active benevolence in promoting the cause of religion and education among the various Indian tribes. The true enquiry respecting these tribes is not, whether the duty of instructing them be an imperative one, but how this duty can be most speedily, usefully and efficiently performed. And the question, which we tako to be the pressing one, in the present condition of evangelical operations is, whether there be any thing in the condition and present state of dispersiom of the Indians, which requires a pectiar adaptation of the means of instruction, or the ordinary modes may be exclusively pursued.

On this point we may be allowed to speak rather from the results of personal observation, than from preconceived theory. The time has gone by with us when we regarded the conversion of an adult Indian as an anomaly in religion. The course of missionary exertions on the frontiers has brought numerous examples of such conversions before us. It has afforded the opportunity of observing, that the plain and ariking doctrinea of Scripture may be declared to them, in a language which they understand, with as promising prospects of their being understood and assented to, and adopted as the governing axioms of life, as to other classes of individuals not further adranced in the scale of intellectual improvement Coming as these doctrines do, to their minds with the charm of novelty, (a priaciple as deeply implanted in the Indian as the white man,) they are the more readily led to consider them. The principal impediment, aside from external vices, arises from the acquisition of the langunges-an ohject demanding the earliest attention, in all attempts at instruction. Three requisites appear to be essential to the instruction of these tribes.

1. They should be taught in their owa languages.

2 Schools should be located in their own territories.

## 3. Reading, and a seleet literature should be provided for them.

It is in vain to suppose that the tribes will cast aside their mother tongues, and learn a new language. The world's history shows no such example. Nations the most liberal in mind would not do it, and shall such a sublime effort be expected from benighted Iodians?

By introducing schools into the Indian villages, suspicion on the part of parents is allayed. The Indian is a mass of auspicions. In his natural slate be suspects every body and every thing-for to him even things without life, have life. Parents, who daily see the improvements of their children, will be the more ready to second the efforta of teachers. Children who are drawn away to foreigu boarding schools, becorae eftranged from their tribes, and when they return, it is too often found that they have acquired a species of knowledge which places them so far above their people, that they become objects of distrust. Despondency or intemperance often ensue. Calvin and Konkapot are examples of this. To make schools efficacious, useful and popular, they should be located in villages and neighborhoods in the heart of the nation, where the instructive priociple may become diffusive, end its benefits extend to and be acknowledged by all. Nothing in these efforts to teach the young, can supply the want of kindness, simplicity and clearness, A kind and patient manner will win the stoutest heart.

The mode of lecturing to the Indians, old and young, on the Scriptures, or otber subjects, should be of the plainest character, and as little as possible left to inference. What is not plainly told will generally not be inferred at all, or misconceived. Books should be as simple as elementary books can be made. Orthography should also be simple and uniform. No mules are likely to facilitate early instruction hut those of the most obvious necessity. Much of the dicta iaid down in our older echool books, is rather suited to puzzle, than inform the beginner. Children are not capable of philological analysis, and lenst of all, Indian children. Indeed, if the art end spirit of teaching he present, and there be perseverance and discrimination in the order in which facts are presented to the youthful mind, it is of little moment how much of the external circumstances of customary form be dispensed with. Personal exertion and ingenuity on the part of the instructor, must often compensate for disadvantages of time and place. A circle of Indian children, gathered under a grove, might he as certainly taugit the alphabet and digits, as if they were covered with a cosily canopy. Buildings become necessary only to avoid the common changes of the atmosphere, and to ensure the observance of order. But such huildings require nothing beyond the simplest arrangements of a school house. It has been found that ehildren and parents are bctier kept from the sources of jealousy and suspicion, if the acholars come from their parents' lodges in the morning, and return
to them in the evening. He who teaches Indians mast accommodete himself to Indians.
In the aystemof inatruction, the monitorial plan, as it is most economical of time, and makes a more direct appeal to the spirit of emulation (which the natives in an eminent degree possess), is preferable, so far as it can bo carried. There are also some features in the plan of infant schools, highly caleulated to interest Indian children. It is found that their atceation is quickiy atracted to forms representing astronomical and other bodies. And the apparatus may be dismissed at the precise point where the idea is retained in the memory. But every school, whatever aid it may derive from monitors, should be phaced under the strict and constant care, and personal supervision of a white teacher.

Large expenditures in the shape of huildings and fixtures, diminish the means applicable to instruction, and are preciesly those features which either excite jealousy on the part of the Indians, or animadyersion on the part of the whites And it is on this account, that boarding schools ahould be confined as closely as possible wo the sites of academical instruction, and always within the Indian limits. To teach a scholar is one thing-to board, clothe and lodge him another. There is no comparison, in point of expense, between the first and second objects. There is no necessary connexion between them. And we helieve that in schools located in the territories of the tribes, the furnishing of both, in the form of free boarding schools, has been a positive injury inetead of a benefit, to both parente and children. No systern is so exclusively right as that which begins right. It is a position which forms the very basis of civilization, that each member of society must support himself by his own indusrry. And it seems important to teach this truth eariy to the Indians, If they are ever to exist as a happy, united, and independent people, it muak be through faithful individual exertions on their own part. And were the question between the adoption of manual labour and free schook, that is, schools to which the natives do not contribute their funds, I should think there could be no hesitancy, in point of policy, as to the preference of the former.
Schools, to be largely beneficial to the tribes, must be local. A school situated without the boundaries of the tribe, is also measurably withoor the boundary of a moral influence upon it Experience hes fully demonstrated the fuility of alumpts to change the moral condition of tribes by educaling a select number of their youths at colleges and other remoto points, while no simulaneous efforts were made with the body of the tribe inelf. The learning of colleges has thus, in a measure, boen thrown away upon individuals, who, on returning to their tribes, have found them in no way prepared for appreciating their acquiremeats. Did they labour to convince their erratic countrymen of the advanages of leaming over
ignorance, of farming over hunting, of letters over rade signg-it has been wo little purpose-
"All doubt, few aid, and fewer understand."
Neither ean such isolated scholars themselves maintain the state of artificial elevation, in which adventitious circumstances have placed them. Their first efforts have been received with coidness and indifference, and they have at last themselves often yielded wo despondency. Like partial efforts in other departments of buman knowledge the result is bad.

> Teach one in fify, and the one shall stare
> To see how blind the nine and forty are;
> But tench a bend, and there are none behind
> To mark how wadt of knowledge sinks the kind.

The whole failure, in these cases, has resulted from the want of local district sehools, and other sources of instruction to raise the mass ;-for if the mass of a tribe be degraded, it is of little avail that a few be educated. And whatever degree of objection arises to village schools in the nation, wholly ceases the moment they are well established and mutuplied. Thia may be regarded as the plain reason why some of the tribee, who have enjoyed the double advantage of academical and primary local instruction, bave made more rapid adrances in civilization. The Creeks and Choctaws educated their principal men, and left the mass iguorant The Cherokees did betler, hat did not escape the evil. This is the great diff. culty these tribes still labour under.

Of the same era with the policy of educating at remote points the feve, while the many remained in gross ignorance at some, is the opinion that the native languages should be neglected. The theory on this subject is, that it is easier wo teach the Indians the Engliah Language than wo learn theirs. The reverse is manifestly true

We have heard of projects for their melioration, in which it was mainthined "that the Indians must siak the dirtinction of languages." As if it were an easy thing to induce a whole nation to lay anide its mothor tongue. Did Ellios or Edwards, or Brainerd reason thus?

A stronger reason, it is granted, for the diruse of the native langosgra, were it posaible to replace them, arises from their crude and imperfect state, and their consequent maladapotion to the purposets of moral instraction. An Indian, who has been all his life in the hahit of supplying tho deficiencies of speech by geaticulation, figurative signs, and circamlocrtion, may not be aware how far he comes short of exactnesa and precision in the conveyance of thought. But when such a language comes to be writen and calcivated, thare will be found means of obviating numerous deficiencies and redandancies The pertinacious distidection of matter inlo animate and inanimnie clasees, while it destroyt tho distinction of.
gender, has imparted to the vocabulary a cumbrous load of inflecions, which greatly extend its limits, while there is but little gained in obvious utility. Cannot this principle be retrenched? The extension in epace caused by it, is still further increased by the most hesetting evil of the lan-guages-their tautological forms, by which often not a particle of new meaning is conveyed. These defects will have been observed by thase who have given any attention to Scripture translations, (which, frow the days of Zeisberger to those of Peter Jones, are rather numerow,) the moax obvious external trait of which is, that one and all, they require nearly double the space in the translations, which the Scriptures occupy in either the Hebrew, Greek or English. True, some of this is owing to the verse system, and the attempt to give literally word for word-instead of being content to throw out the idea in a free original form, and afierwards divide and apply figures. These defects weigh much against the subsential claims of the languages to culitivation. They do not, however, interpose a bar to their use-on the contrary, it is a field in which the genius of missionary enterprise is invited to persevere, and may be expected to triumph. All that relates to the conversion and improvement of the aduls population, must be done in the ratioc languages. And it is a question of practical importance, to what extent they may be employed in primary schools, and at what point they may be laid aside. On this subject an experiment, on a wide scale, is in progress, both in the Sandwich islande and on this continent, and we may confidenly look to the active labourers in the missionary field, for practical information. We apprehend that the only Bible these nations will ever read as nations, must be an Indias Burle Elliot had the germ of truth in his mind, when he sat down to this work amongst the Natics.

Indian literature. In adrancing the subject of moral and religious instruction among the Indians, in the native tongues, a aystem of propor reading books and literaturo should be prepared for them. It is not improbable, to my mind, that the peculiar branch of modern benevolence which is comprehended by the subject of Tracts, may open a means of extonsive usefulness. An appropriate series of scyool and nassarairy, and belles-lettres tracts, in the native and in the English languages, would prove valuable and efficient helps to teachers now in the field, both in their preparation and distribution. And so long as the high postage system continues, one or two minsionary presses on the frontiers would quadruple the powers of every active labourer. The press ahould be brought to bear in every possible way on the Indian race.
In the preparation of such papera in the native tongues, it is obvious that a brief and simple system of alphaberical notation, with accents, in required. And to be generally useful, it should provide for the whole circle of the languages. The Cherokee charater is applicable only to the Cherokee language. How far this object may be attained, withoat a
2. departure from the primary sonnds of the English alphabet, and without, at the same time, admitting any of its inexactitude and partiality of application, is perhaps a question of importance. For it must be recollected, that the literature of the Indians, when they come to require it, is one which they will find recorded in the English Language. And it would therefore appear to be an advantage, that the sounds of its alphabet be not such as shall grate on the Indian ear, in repulsive and foreign tones. They are not, when educated, to read a French, a German, or an Iualian literature. We stand ready to give them Bacon and Locke, and Franklin and Milton.

In connection with the education and conversion of the Indiane, the subject of the organization of the elements of a civil government among the tribes who have expatriated to the west banks of the Mississippi, is one of the number which claims missionary thought and aid. But momentous as this is, there is none of more practical importance than the subject of temperance. Without temperance nothing can be accomplished. There can be no Christianity; no well-attended schools; no well-cultivated farms; no comfortable buildings; no comely dress; no personal cleanliness; no adequate means of subsistence; no general health, or sound prosperity. Without temperance, the Bible and the achool book may be carried to the Indians, but they will be carried ats sealed books.

It is a curious fact, that the word "Puck," which has been thought so Shaksperian, and which has puzzled so mnny commentators upon the great dramatist, is a generic term in the Algonquin dialect. It requires no very great stretch of fancy to suppose that the ready ear of Shakspeare caught the peculiar and most daintily appropriate term from the relations of those accomplished navigators, with whom he was undoubtedly familinr, and who, according to Gallatin and other researchers, had been for more than thirty years hefore the death of the great poet, intimately acquainted with that part of the const where the Algonquin dialect was spoken, and had even attempted to colonize so early as 1585 , on the coast of North Carolina, at the small island of Ronnole, which, as eisewhere on the coast, was inhabited hy the Algonquin tribes.-Eluzabeth Oakes 8мптн.

Wabeno is the name of a eociety of men who perform their orgies at night. They involve foul spirite, and affect maligaant arts. It is the most debased of all the Indian associations. The term is from Wabun, daylight, and may be idiomatically expressed in English, by the phrase daylighters, or men who dance till day-hreak.

## ORIGIN

## HIST0RY 0F THE RACE.

## historical traditions of the chippewas, odjisWAS, OR ODJIBWA-ALGONQUINS.

Or all the existing branches of the Algonquin stock in America, this extensive and populous tribe appears to hnve the strongest claims to intellectual distinction, on the score of their traditions, so far, at least, as the present state of our inquiries extends. They possess, in their curious fictitious legends and lodge tales, a varied and exhaustless fund of tradition, which is repeated from generation to generation. These legends hold, among the widd men of the north, the relative rank of story-books; and are intended both to amuse and instruct. This people possess also, the art of picture writing, in a degree which denotes that they have been, either more careful, or more fortunate, in the preservation of this very ancient art of the human race. Warriors, and the bravest of warriors, they are yet an intellectual people.

Their traditions and belief, on the origin of the globe, and the existence of a Supreme Being, are quite accordant with some thiogs in our own history and theory. They believe that the Great Spirit created material matter, and that he made the earth and heavens, by the power of his will He afterwards made animals and men, out of the earth, and he filled space with subordinate spiris, having something of his own nature, to whom he gave a part of his own power. He made one great and master spirit of evil, to whom he also grve assimilated and subordinate evil spirita, to execute his will. Two antagonist powers, they beliere, were thus placed in the world who are continually striving for the mastery, and who have power to affect the fortunes and lives of men. This constitutes the groundwork of their religion, sacrifices and worship.

They believe thet animals were created before men, and that they originally had rule on the earth. By the power of necromancy, some of these animals were transformed to men, who, as soon as they assumed this now form, began to hunt the animals, and make war agsinst them. It is
axpected that these animala will resume their human ahapeas, in a furare state, and hence their hunters, feign some clumey excuses, for their present policy of killing them. They believe that all animals, and birds and reptiles, and even insects, possess reasoning faculies, and have souls It is in these opinions, that we detect the ancient doctrine of transmigration.

Their most intelligent priesta tell un, that their forefathers worshipped the sun; this luminary was regarded by them, as one of thair Medas told me, as the symbol of divine intelligence, and the figure of it is drawn in their system of picture writing, to denote the Great Spirit This symbol very often occurs in their pictures of the medicine dance, and the wabeno dance, and other sacred forms of their rude inscriptions.

They believe, at least to some extent, in a duality of souls, one of which is fleshly, or corporeal, the other is incorporeal or mental. The flesbly soul goes immediately, at death, to the land of spirits, or future bliss. The mental soul abides with the body, and hovers round the place of sepurture. A future state is regarded by them, as a state of rewarde, and not of punishments. They expect to inhabit a paradise, filled with pleasures for the cye, and the ear, and the toste. A strong and universal belief in divine mercics absorbs every other attribute of the Great Spirit, except his power and ubiquity; and they believe, so far as we can gather it that this mercy will be shown to all. There is not, in general, a very discriminating sense of moral distinctions and responsibilities, and the faint out-shadowings, which we sometimes hear among them, of a deep and sombre stream to be croesed by the adventurous soul, in ite way to the land of bliss, does not exercise such a practica! influence over thair lives, at to interfere with the belief of univeral acceptance after death. So firm is this belief, that their proper and most reverend term for the Great Spirit, is Gezha Monedo, that is to say, Merciful Spirit Gitchy Monedo, which is also employed, is often an equirocal phrase. The term Warhefud, or Maker, is used to designate the Creator, when speaking of his samated works, The compound phrase Wasosemigoyan, or universal Father, is also beard.

The great spirit of evil, called Mudje Monedo, and Matche Monito, is regarded as a created, and not a preexisting being. Subordinate spirits of evil, are denoted by using the derogative form of the word, in sh by which Moneto is rendered Monetosh. The exceeding flexibility of the language is well calculated to enable them to express distinction of this nature.

This tribe has a general tradition of a deluge, in which the earth was covered with water, reaching above the higheas hilis, or mountains, hut not above a tree which grew on the latter, by climbing which a man was anved. This man was the demi-god of their fictions, who is called Manabozho, by whose means the waters were stayed and the earth recreated. He employed for this purpose various animals who were sent to dive
down for some of the primordial earth, of which a litte was, at leogth, brought up by the beaver, and this formed the germ or nucleus of the new, or rather rescued planet. What particular allegories are bid under this story, is not certain; but it is known that this, and ocher tribes, are much in the habit of employing allegories, and symbols, under which we may suspect, they have conccaled parts of their historical traditiona and beliefs. This deluge of the Algonquin tribes, was produced, as their legends tell, by the agency of the chief of the evil spirits, symbolized by a great serpent, who is placed, throughout the tale, in an antagonistical pasition to the demi-god Manabosho. This Manabozbo, is the same, it is thought, with the Abou, and the Michabou, or the Great Hare of elder writers.
Of their actual origin and history, the Chipperas have no other certain tradition, than that they came from Wabenong, that is to asy, the land of the enst. They have no authentic bistory, therefore, but such remembered events, as must be placed subequent to the era of the discovery of the continent Whether this tradition is to be interpreted as an ancient one, having reference to their arrival on the continent, or merely to the track of their migration, after reaching it, is a question to be considered. It is only cerrain, that they came to their present position on the banks of Lake Superior, from the direction of the athantic seaboard, and were, when discovered, in the attitude of an invading natinn, pressing westward and northward. Their distiactive name sheds no light on this question. They call themselves Odjib-wag, which is the plural of Odjibwa,-a term which appears to denote a peculisrity in their voice, or manner of utterance. This word has been pronounced Cbippewa by the Saxon race in America, and is thus recorded in our treaties and history. They are, in language, manners and customs, and other characteristics, a well marked type of the leading Algonquin race, and indeed, the most populous, important, and wide spread existing branch of that family now on the continent The term Chippewa, may be considered as inveterately fixed by popular usage, hut in all disquisitions which have their philology or distinctive character in view, the true vernacular term of Od-jib-wa, will be found to possess advantages to writers. The word Algonquin is atill applied to a mall local band, at the Lake of Two Mountains, on the Utawas river, near Montreal, but this term, first bestowed hy the French, has long been a generic phrase for the entire race, who are identified by the ties of a common original language in the United States and British America.
One of the most curious opinions of this people is their belief in the mysterious and sacred character of fire. They obtain sacred fire, for all national and ecclesiastical purposes, from the flint. Their national pipes are lighted with this fire. It is symbolical of purity. Their notions of the boundary between life and death, which is also symbolically the limir of the material verge between this and a future state, are revealed in con-
nection with the exhibition of flames of fire. They also make sacrifices by fire of some part of the first fruits of the chase. These traits are to be viewed, perbaps, in relation to their ancient worehip of the sun, above noticed, of which the traditions and belief, are still generally preserved. The existence among them of the numerous classes of jossakeeds, or mut-terers-(the word is from the utterance of sounds low on the earth,) is a trait that will remind the reader of a similar class of men, in early ages, in the easern hemiophere. These persons constitute, indeed, the Magii of our western forests. In the exbibition of their art, and of the peculiar notions they promulgate on the subject of a sacred fire, and the doctrina of transraigration, they would seem to have their affiliation of descent rather with the disciples of Zoroaster and the fruiful Persian stock, than with the less mentally refined Mongolian hordes.

TO A ELED, SEEN UNDER MY WINDOW IN THE GARDEN.
By the lale Mra. H. R. Schoolcraft, who was a grand daughter of the wer chief Wabosere.

Sweet litle bird, thy notes prolong, And ease my lonely pensive hours; I love to list thy cheerful song, And hear thee chirp beneath the flowers.

The time allowed for pleasures sweet,
To thee is short as it is bright,
Then sing 1 rejoice! before it feet,
And cheer me ere you take your dight.

Pontinc, when he determined to oppose the settling of the Baxon race west of the Allegbanies, sought to invent a currency, to carry on his war. He bethought him of this expedient. He drew his totem on pieces of bark, or paper, and these, putting over it a figure of the thing he wanted, tradition says, he faithfully redeemed.

Whatever else the Indian lacks, in his mental constitution, he doee not lack belief. He believes, among other things, tbat, by an act of necromancy, a part of the human faraily wete transformed into bears, wolves and other animals, who are to be restored to their original shapes in another world.

Dr. Johnson says-The source of intellectual pleasure in variety: uniformity must tire at last, though it be uniformity of excellence.

## TRADITIONARY WAR SONGS

## OP TH:

## ODJIBWA ALGONQUINS.

Whoever has heard an Indian war song, and witnessed an Indian wat dance, must be satisfied that the occasion wakes up all the fire and energy of the Indian's soul. His flasbing eye-his muscular energy, as he begins the dance-his violent gesticulation as he raises bis war-cry-whe whole frame and expression of the man, demonstrate this. And long before it comes to bis turn to utter his stave, or portion of the chant, his mind has been worked up to the most intense point of excitement: hit imagination has pictured the enemy-the ambush and the onsel-she victory and the bleeding victim, writhing under his prowess: in imagination be has already stamped him under foot, and toru off his reeking scalp: he has seen the eagles bovering in the air, ready to pounce on the dead carcass, as soon as the combatants quit the field.

It would require strong and graphic language to give descriptive mtterance, in the shape of song, to all he has fancied, and seen and feels on the subject He, himself, makes no such effort. Physical excitement has absorbed his energies. He is in no mood for calm and connected descriptions of battlo scenes. He has no stores of measured rhymes to fall back on. All he can do is to utter brief, and often highly symbolic expressions of courage-of definnce-of indomitable rage. His feet stamp the ground, as if he would shake it to its centre. The inspiring drum and mystic rattle communicate new energy to every step, while they serve, by the observance of the most exact time, to concentrate his energy. His very looks depict the spirit of rage, and his yells, uttered quick, sharp, and cut off by the application of the hand to the mouth, are starting and horrific.

Under such circumstances, a few short and broken sentences are enough to keep alive the theme in his mind; and he is not probably conscious of the fact, that, to an unimpassioned and colm listener, with note book in hand, there is not sufficient said to give coberence to the song. And that such a song, indeed, under the best auspices, is a mere wild rhapsody of marial thought, poured out from time to time, in detached sentences, which are, so to say, cemented into lines by a flexible chorus and known tune. The song and the music are all of a piece. Vivid and glowing, and poetic pictures will flat in such a train, and often strike
the imagination by their graphic truth and boldness; but the poet munt look elsewbere for finished melody, and refined and elaborate composition

The Indian is to be viewed here, as elsewhere, as being in the higheas state of his physical, not of bis mental phasis. Such glimmerings may however be picked out of these warlike rhapsodies, as denote that he is of a noble and independent tone of thinking. We shall at least enable the reader to judge. The following specimens, which have been derived from aclors in the depths of the forest, consist of independent songs, or atanzas, ench of which is sung by a different or by the same warrior, while the dance is in progress. The words bave been taken down from a young Chippewa warrior of lake Superior, of the name of Che che-gwy-ung. It will be perceived that there is a unity in the theme, while each warrior oxercisea the freest scope of expression. This unity I have favoured by throwing out such stanzas as mar it, and afterwards arranging them together.

## WAR SONG.

a. In beginning this song the warrior has turned his eyes to the cloude

O shá wan ong (From the place of the south)
Un dos' e wug, (They come,) repeat.
Penă' se wug,
(The birds, i. e. the warlike birds.)'
Ka baim wai wá dung-ig. (Hear the sound of their passing screams on the air.)
b. The idea of ravenous hirds hovering in the sky, still prevails-

Tod ot to be (I wish to change myself to be)
Penáse.
(A bird.)
Ka dow we á we yun.
(His swift body-to be like him.)
c. The warrior now rises above all thoughts of fear.

Ne wa be na, (I cast it away.)
Né owa (My body.)
Ne wá be na, (Repeats.) This is a high symbolical boast of per-
N6 ow a. sonal bravery.
d. He appeala to the Great Spint for extroordinary power.

Na ban á kum ig,
Tshe ba be wish' em ug.
In do main em ik,
Mon edo,
Shat wa nem id,
(On the front part of the earth,)
(First shines [strikes] the light.)
(Sucb power to me,)
(My God,)
(In thy mercy give 1)

By the boldness of this figure he claims the omnipotent power of the sun to see and discover his enemies.
e. He uphraids such of his people as hold back, and do not join in the dance-that is to say, enlist in the war.

Wa go nain', e win? (Why do ye, warriors,)
A be yun ah,
(Stand back?)
Wa wos is se, we yun. (Ye who bear the mark of the A waseen.)
The Awasee is a kind of fish, which is the toters of a clan.
$f$. He declares his full purpose to enter into the war.

Ne máje, e yeh!
Ne má je, e yeh!
Ne me kun ah, e yeh!
Ge zhig neen wá tin,
Hohl Ne monedo netaihuatum 0 win.
(I go to the spot-the war path!)
(Repeats.)
(My war path!)
(My sky is fair and clear.) The common phrase to denote good fortune. (Let others linger. Onward I my God!-my right 1)

In presenting these specimens of the original words of come of our western warriors, we are permitted to give the annexed versions of them from the pen of one of our most gifted writers

$$

& \text { WAR-SONG-"Pe-ná ee-wug." } \\
& \text { (From the Algonquin of Schoolerar) } \\
& \text { 日Y C. F. Horfian. }
\end{aligned}
$$

1. 

Hear not ye their shrill-piping screams on the air?
Up 1 Braves for the conflict
prepare ye-prepare!
Aroused from the canehrake, far south by your drum,
With beaks whet from carnage, the Battle Birds come

## II

Oh God of my Fathers, as swinly as they,
I ask but to swoop
from the hills on my prey:
Give this frame to the winds, on the Prairie below,
Bat my soul-like thy bolt-
I would hurl on the foe!

IIL
On the forehead of Earth
trikes the Sun in his might,
Oh gift me with glances
as searching as light.
In the front of the onslaught,
to single each crest,
Till my hatchet grows red on their bravest and beat.
F.

Why stand ye back idly, ye Sons of the Lakes? Who boast of the scalp-locks, ye tremble to take.
Fear-dreamers may linger, my skies are all bright-Charge-charge-on the War-Path, for God and the Right.

Take the following additional example, of a death song. These stanzas have all been actually sung on warlike occasions, and repeated in my hearing. They have heen gleaned from the traditionary songs of the Chippewas of the north, whose villages extend through the region of lake Superior, and to the utmost sources of the Mississippi. Those bands are the hereditary foes of their western neighbours, the Dacooahs or Sioux, who are generally called hy them, by way of distinction, Na do wa' sees, that is to say, ove enemes. The allusions in the songs are exclusively to them. In writing the original, I omit the chorus, as it is not susceplible of tranglation, and would increase considerahly the space occupied.

## DEATH SONG.

1. In opening this song the warrior is to be contemplated as lying wounded on the field of battle.

A' be tuh geo zhig, (Under the centre of the sky,
Ne bả baim wá wa (I utter my baim wa wa
Baimwawa, is the sound of passing thunders, which will convey a just idea of the violence of this figure.
2. His thoughts revert to the star of his desting.

Ain dah' so gezhig (Every day, thou star l)
Ke ga gun o wa bom in. (I gaze at you.)
It is the morning star that is here alluded to.
3. He sees the birds of carnage hovering over the field.
$A^{\prime}$ be tuh getezh-ig
Ai be yaun
(The half of the day)
Pe na te wug.
(I abide-gazing)
Pe pa se wug. (Ye warlike birda)
4. He keeps the flight of these birds before his mind and hears their ahrill cries.

| Pe misk wosh e wug | (They fly round the circuit of the alcy.) |
| :---: | :---: |
| Pená be wug | (The birds-circling) |
| $A^{\prime}$ be tah geezh ig oag. | (Round hall the circuit of the sky.) The meaning is, approaching him in circle, more nearly, as life becomes frinter in him. |

6. This figure is continued He lies hleeding.
$A^{\prime}$ zha waush e wug
Penal se wug.
(They fly round the circurt of the aky.)
(The birds-circling)
(Round half the circuit of the sky.) The meaning is, approaching him in circle, more nearly, as life becomes fainter in him.
7. He feels that he is called to enother world.

| A pit she Mon e doag | (The high gode) |
| :--- | :--- |
| Ne mud wé wa | (My praise) |
| Wá we ne goeg. | (They sound.) |

7. He is content and willing to go.

Ka gait', ne min wain' dum
Ne bun af komig
Tahe be be wish e naun.
(Full happy-I)
(To lie on the battlefield) (Over the enemy's line.)

# DEATHSONG-" $A$ ' be tuh ges zhig." <br> (From the Agronquin of Schooleraft.) <br> by c. f . Horfinan. 

L.

Under the hollow sky, Stretched on the Prairie lone,

Centre of glory, I
Bleeding, disdain to groan,
But like a batle cry
Peal forth my thunder moan,
Baim-oà-Dā l
II
Star-Morning Star, whose ray
Etill with the dewn I see,

> Quenchless through half the day
> Gazing thou seest me-
> Yon birds of carnage, they
> Fright not my gaze from thee !
> Baim-wa-wa!
> II.
> Bird, in thine airy ringa
> Over the foeman's line, Why do thy flapping wing Nearer me thus incline? Blood of the Dauntless bringa*
> Courage, ob Bird to thine !
> Baim-aiand!
> Hark to those Spirit-notes!
> Ye high Heroes divine,
> Hymned from your god-like throats
> That Song of Praise is mine I
> Mine, whose grave-pennon floatst
> Over the foeman's line !
> Baim-wa-va!

Brant, notwithstanding the views preseated, in the meritorinus life of him, in connection with the revolutionary border wars, by the lnte Col. Stone, was in a false position, bore a double character, and was the object nf just suspicion and reproach, during the entire period. The attempt to wipe this stigma from his memory, which does so mucb credit to the heart of the writer, has been made at too recent a period, while many of the actors of those scenes are yet alive, to be successful. He was the bitter and implacable foe of the Americans, in every phase of the contest No plea can excuse his barbarities ; they are aggravated hy the circumstances of his education

The Algonquin tribes believe in the doctrine of the transmigration of souls. This appears clearly in some of their legends. Pappuckewis, the Indian Merry Andrew, was once a wolf, and once a wild goose, or brant. Being sore pressed in one of his adventurea, he was, at another time, changed into a rock, to escape a etroke of lightning.

[^25]
## SKETCHES OF THE LIVES OF

## NOTED RED MEN AND WOMEN,

## WHO HAVE APPEARED ON THE WESTERN CONTINENT.

## BRANT, RED JACKET, UNCAS, MIONTONLMO.

 DEMOCHTIC LSVIET-1843.

The Egyptians embalmed their dead in myrrh and spices, but the blessed art of printing has given us a surer and less revolting method of preserving and transmitting to posterity, all that is truly valuabla in the plaudits of virtue, worth, and honor. Books thus become a more permanent memorial than marble, and by their diffusion scatter those lessons among all mankind, which the age of mounds and hieroglyphics, stone and papyrus, had confined to the tablet of a shath, or the dark recesses of a tomb or a pyramid. It is never to be forgotten, that in the development of this new phasis in the history of the human race, it was printing that fires lit the lamp of truth, and has driven on the expariment, till the boundaries of letters have well nigh become co-extensive with the world. If we do not widely err, there is no part of the globe, where books of all descriptions have become so cheap and abundant as they are at this cime in the United States, and, laying aside all other considerations, we may find a proof of the position stated in the fact, that our vernacular literature is no tonger confined to the production of school books, the anmals of $l_{\text {aw }}$ and divinity, the age of muddy pamphlets, or the motley pages of the nerspaper. We have no design to follow up these suggestions by showing how far the study of the natural sciences, the discussion of political economy, or the advances of belles-letres, have operated to produce this result; far less to identify those causes, in the progress of western arts and commerce, which bave concurred to bring down the price of books, and scater the blessings of an untrammelled press, arnong all classes. It is sufficient for our purpose to eay that even the lives of our distinguished native chisfrins have come in for a share of modern notice, and, we feel proud to add, of a notice which, so far as it reaches, is worthy of the subject. And should oar contributions on this head, for the last few years, be equally well followed up for a few years to come, even the desponding strains of one of
their own impersonated heroes can no longer be repeated with perfect truth :

> "They sink, they pass, they fly, they go,
> Like a vapor at monnings dowwn, Or a flash of light, whose sudden glow Is seen, admired, and gone.
> "They died ; but if a brave man bleeds, And fills the dreanmess grave, Shall none repeat his name, his deeds, Nor tell that he was brave?"

To no one in our literary annals is the public so much indebted for rescuing from oblivion the traits and character of the four celebrated cbiefs whose mames stand at the head of this article, as to the able author of these biographies, William L. Stone. Gifted with a keen perception of the questions of right and wrong, which turn upon the planting of the colonies among barbarians, who more than idled away their days upon a soil which they did not cultivate-with a deep sympathy in their fate and fortunes, on the one hand, and the paramount claims of letters and Christianity on the other, he has set himself to the task of rendering justice to whom justice belongs, with the ardor of a philanthropist, and the research of a historian. He appears to have planned a series of biographics which, if completed, will give a connected view of the leading tribes who occupied New York, Connecticut, Rhode Island, and Massachusetts, with a range in the examination of contemporary men and collateral topics, which embraces a wide circle. And he has filled up the outlines of his plan, thus far, in a manner which leaves but litle to glean in the path which he has trod. If the exteosion of this circle, and the largo amount of contemporaneous mater hrought in, bas, in the minds of some, abstracted too large a share of attention, and left the hiographies with less unity and compactness than they would otherwise have assumed, this is exclusively the fault of their plan, so far as it is acknowledged, and not of the execution. And for this course of extension there is a plea to bo found in the nature of the subject, in the treatment of which, scantincss of material was often sought to be supplied by the introduction of collateral and sometimes extraneous matter.

We propose briefly to aotice the serics of these biographies in their order of publication. In his first work on Brant, he has presented, in living colors, the great Mohawk of 1776, who rose up to crnsh that confederacy which Washington and his compeers had pledged their lives to maintain. Brant was a man of power and enpacilies, mental and physical, beyond his tribe; and was so situated, in the actua! contest, as to chrow a greater weight into the scale against us, than any other, or all of the hostile chiefs of the Red Race put together. If he could not, liko Ariel, call
up the "spirits of the vasty deep," he could, at his bidding, summon together the no less malignant spirits of the woods, who fell upon oar sleeping hamlets with the fury of demons. And whether at Johnson Hall or Niagara, at Cherry Valley or Schoharie, on the waters of the Oriskany or tbe Chemung, he was the ruling and informing spirit of the contest Such was the power he wielded as commander of a moss effective body of light roops (for such are all Indian warriors), who were supported hy large and well appointed armies, that, like the electric flastes of the boding storm, he preceded the heavier outbreak by sounding aloud the wild notes of terror and diamay. It was in this manner that his name became a talisman on the frontiers, to conjure up deeds of evil, and in this way also, doubless, it became loaded with reproaches, some of which, as the author has denoted, were due to other actors in the contest. It is difficult, however, to disturb the judgments of a preceding age, on the character of individuals who have long possed off the slage of action, wheher those judgments be favorable or unfavorable; and it is, in fact, impossible to re verse them. It is only necessary to glace backward a shor way, on the track of biography, to perceive that posterity never revises the opinions once put on individual character, heroic or litcrary. It tries to forget all it can, and every body it can, and never remembers a long time any anme which it is possible to forget. It is willing, we should infer, to concede something to the great men among barbarian nations, whose names have often burst upon civilized society with the fenrful attractions of the meteor, or the comet, prodacing admiration in the beholders, without stopping to inquire the true cause. Such were the Tamerlanes, and the Tippoo Saibs of the eastern world, of a prior age, ns well as the Mehemet Alis and Abdel Kaders of the prescnt. And such were, also, with reduced means of action, numbers of the American aboriginal chiefs, who, betreen the days of Manco Capac and Micanopy bave figured in the history of the western world. Most of these men owo their celebrity to the mere fact of their haviog dazzled or ostounded, or like Brant himself, excited the terror of those who opposed them. In the case of the latter, a change of opinion in those particular traits which affect his humanity, is less readily made, from the fact, yet generally remembered, that he had received a Christian education ; that be was, whilo a mere boy, received into the best society, acquired the English language, and had been instructed, first at a New England academy, and afterwards at one of its most praclically efficient colleges. Posterity holds the Mohawk chief responsible to bave carried the precepts thus obtained into the forest, and to have diffused their blessings among those who had perhaps his bravery, without his talents or bis knowledge. Those who fought against him were ill qualified, we confess, to be his judges. He had not only espouscd the wrong cause, wrong because it was adverse to the progress of natioual freedom and those very principles his people contended for ; but be batled for in with a
master's hand, and made the force of his energy felt, as the author has more fuily indicated than was before known, from the banks of the Mohawk and the Niagara, to the Obio, the Miami, and the Wabesh. Yet, if there was error in the extent to which he failed to carry the precepts of civilization and Christinnity, it was meet it should be pointed out, although it will also be admited, the public have a right to look for the strongest of these proofs of a kind and henevolent feeling towards bis open enemies, out of the range of his domestic circle. His family bad carried the incipient principles of civilization, which he gave them, too high-they had exbibited to the next age, a too prominent exampie of cultivation and refinement in every sense-not to feel deeply the obloquy cast upon his name, by the poetic spirit of the times; and not to wish that one who had, in verity, so many high and noble qualities, both in the couacil and the field, should ylso be without a spot on his humanity. We deem the feeling as honorable to all who have the blood of the chieftain in their veins as it is praiseworthy in his biographer. We cannot, however, consent to forget, that bistorical truth is very severe in its requisitions, and is not to be put off, by friend or foe, with bearsay testimony, or plausible surmises.

Brant cannot, like Xicotencal, be accused of having joined the inveders of his country, who were recklessly resolved upon its suljugation; but he overlooked the fact, that both the invader and the invaded in the long and bloody border warfare of the revolution, were, in all that constitutes cbaracter, the same people. They were of the same blood and lineage, spose the same language, had the tame haws and customs, and the same literature and religion, and he failed to see that the only real point of difference betiveen them was, who should wield the sceptre. Whichever party gained the day in such a contest, letters and Christianity must triumph, and as the inevitable result, barbarism must decline, and the power of the Indian nation fall.

In Brant, barbarism and civilization evinced a strong and singular contest. He was at one moment a savage, and at another a civilian, at one moment cruel, and at another humane; and ha exhibited, throughout all the heroic period of his eareer, a constant vacillation and struggle between good and bad, noble and ignoble feelings, and, as one or the other got the mastery, he wat an angel of mercy, or a demon of destruction. In this respect, his character does not essentially very from that which has boen found to mark the other leading red men who, from Philip to Osceola, heve appeared on the stage of action. Like them, his reasoning faculties were far less developed than his physical perceptions. And to attermpt to follow or find anything like a fixed principle of humanity, basing itself on the higher obligations that sway the human breast, would, we fear, become a search after that which had no existence in his mind; or if the germ was there, it was too feeble to become predominant. We do not think it necessary, in conmenting on his life, to enter into any nice
train of reasoning or motives to account for this characteristic, or to reconcile cruelties of the most shocking kind, when contrasted with traits of mildness and urbanity. They were different moods of the man, and in running back over the eventful years of his life, it becomes clear, that civilization had aever so completely gained the masery over bia mind and heart, as not to desert him, without notice, the moment be heard the sound of the war-whoop. The fact that he could use the pen, supplied no insuperable motive againgt his wielding the war club. His tomahawle and his Testament lay on the same shelf. The worst trait in hia character is revealed in his cardiness to execute acts of purposed mercy. There was too ofien some impediment, which served as an excuse, as when be had a ploughed field to cross to save Wells and his family, or a lame hael, or gave up the desigu altogether, as in the case of Wisner, whom he construed it into an act of mercy to tomabawk.

That he was, however, a man of an extraordinary fimneas, courage and decision of character, is without doubt. But bis fate and fortanes have not been such as to give much encouragement to chiefs of the native race in lending their influence to European, or Anglo-European powers, who may be engaged in hostilities against ench other on this continent Pontiac had realized this before him, and Tecumthar realized it after him. Neither attained the object he sought. One of these chiefs was assamsinated, the other feil in battle, and Brant himself only survived the defeat of his cause, to fret out his latter days in vain attempts to obsin juscice from the power which he had most loyally served, and greanly benefited. Had he been knighted at the close of the contest, instead of being shufled from one great man to another, at homa and abroad, it would have been an instance of a noble esercise of that power. But George III. seemed to have been fated, at all points, neither to do justice to his friends nor his onemies.

Such was Brant, or Thsyendanegea, symbollically, tha Band of his tribe, to whose lot it has fallen to act a more distinguished part in the Colonies, as a consumrpate warrior, than any other aboriginal chieftain who has arisen. And his memory was well worthy of the elaborate work in which his biographer has presented him, in tha most farourable points of view, amidst a comprehensive history of the border wars of the revolation, wilhout, however, concealing atrocities of which he was, perhapes sometimes unwillingly, the agent.

A word, and but a word, will be added, as to some points connected with this chief's character, which are not in coincidence with the generally received opinion, or are now first introduced by way of palliation, or vindication. We confess, that so far as the presence or absence of the Great Mobawk in the massacre of Wyoming, is concerned, the skatements are

[^26]cither inconclusive, or less satieractory than could be wiohed. There was quite too much feeling sometimes evinced by his family, and particularly his son John, to parmit us to receive the new version of the statement without some grains of allowance. An investigation is instututed by Col. Stone as to the immediate ancestry of Brant, and much imporance is attached to the inquiry, whether he was descended from a lioe of hereditary chiefa. We think the testimony adverse to sucb a supposition, and it affords no unequivocal proof of calents, that notwithstanding such an adventitious circumsance, certainly without being of the line of ruling chiefs, he elevated himself to be, not only the head chief and leader of his tribe, but of the Sir Nations. Courtesy and popular will atlach the title of chief or sachern to men of talents, courage or eloquence among our tribes generally; and while mere descent would devolve it upon a chief's son, whatever might be his character, yet this fact alone would be of little import, and give him little influence, without abilities: whereas abilities alone are found to raise men of note to the chieftainship, among all the North American tribes, whose customs and character are known.

It has constituted no part of our object, in these general outines, to examine minor points of the biography or history, upon which the information or the conclusions are not so satisfactory as could be wished, or which may, indeed, be at wariance with our opinions. One fact, however, connected with this name, it is not deemed proper to pass sub silentio. Brant is made to take a part in the Pontiac war, a contest arising on the fall of the French power in Canada in 1759, and which closed in 1763. Brant was at its close but twenty-one years of age, and had not, it is probable, finally returned from his New England tutors. At any rate, there is no reason to suppose, that, at that enrly period of bis life and his influence, he could bave had any participation io the events of that war.
In the life of Red Jacket, or Sngóyewata, we have a different order of Indian intellect brought to view. He was an orawr and a diplomatist, and was at no period of his life noted for his skill as a warrior. Nay, there are indubitable proofs that his personal courage could not always be "screwed up to the sticking point." But in native intellect, he was even superior to Brant. He was, indeed, the Brant of the council, and often came down upon bis opponents with bursts of eloquence, trains of argament, or rhapsodies of thought, which wera irresistible. And of him, it may be symbolically said, that his congue was his tomahawk, and the grandiloguent vocabulary of the Seneca language, his war-club. Nor has any native chieftain wielded the weapon to more purpose, or with a longer continued effect than the great Seneca nrator. The specimeos nf his eloquence which hava appeared in our newspapers for forty years or more, aro atill fresh in the memory, and it was due and meet that these should be cotlected and preserved in a permanent shape, together with such particulars of his life and career as could be obtained. This task has been perforned
by Col. Stone, in a manner which leaves nothing more to be attempted on the subject. Much zeal and industry have been evinced in eliciting facts from every quarter where it was probabie information could be had. And he has brought together a body of contemporaneous proofs and reminiscences, toucbing this chief, which a few years would bave put beyond the power of recovery, and which a position less prominent than he occupied as a public journalist, might have rendered it difficult for another to collect. We need only refer to the names of Gen. P. B. Porter, Rev. J. Breckenridge, Mr. Parish, and Mr. Hosmer, to show the character of this part of his materials.

Other chiefs of the native stock, have produced occasional pieces of eloquence, or admired oratory, but Red-Jacket is the ooly prominent individual who has devoted his whole career to it. That he did, indeed, excel, producing effects which no reported speech of his ever equailed or did josice to, there are still many living to attest In the question of land sales, which arose between the white and red races, there were frequent oceasions to bring him out. And these, in the end, assumed a complicaled shape, from either the vague nature, or ill understood conditions of prior grants. In all these discussions, he preserved a unity and consistency in the set of opinions he had adopted. He was opposed to further sales, to removal, to civilization, and to the introduction of Cbristianity among his peopie. What Brant had done in politics, Red-Jacket repeated in morals Both took the wrong side, and both failed. But it is to be said of the Seneca orator, that he did not live to see the final defeat of that course of policy which be had so long and so ably advocated.
It was remarked by Mr. Clinton, and the fact had impressed others, that the Iroquois, or Six Nations, excelled the other natives in eloquence. Of this, theit history, during the Supremacy of Holland and England in New York, as given by Colden, furnishes ample prools. The specch of Garangula, against the Governor General of Canada and his wily policy, is unexcelled, as a whole, by anything which even Red-Jacket has left in print, though much of the effect of it is due to the superior and beroic positiou occupied by the tribes for whom he spoke. Logan, unexcelled by all others for his pathos and simplicity, it must be remembered, was also of this stock,-Mingo, or Mengwe, as the Delawares pronounced it, being but a generic term for Iroquois; so that the transmission of this trait, from the proud era of the Itoquois confederacy down to modern days, is quite in keeping with the opinion quoted.

It is to be wished that Col. Stone would supply another link in the chain of Iroquois history, by favoring the public with the life of the noted Oneida chief, Shenandoah, for which materials must exist in the Kirklend family.

The lives of the two men, Uncas and Miontonimo, whose leading acts
are described in one of the volumes named in our caption, belong to an carlier period of history, and a different theatre of action. The scene changes from western New York to the seaboard of Connecticut, Rhode Island, and, to some extent, Massachusetts. Uncas was the good genius, the tutelary spirit, if we may so say, of the colony of Conneclicut; and the best monument which that Sate could erect to bis memory, would bo to cbange the unmeaning and worn out name of one of her counties, New London, for that of the noble and friendly cbief, of whose forest kingdom it once formed a patt. From the first day that the English colonists set foot within it, to the hour of his death, Uneas was the unwavering "friend of the white man," ns his biographer justly calls him. He wes of that race, whom history has, without making a particle of allowance for savage ignorance and hereditary prejudice, branded under the name of Pequods. They were of that type of languages and lineage, which was very well characterized gencrically, at least as far souch as the original country of the Delawares; but which assumed a sub-type after crossing the Hudson, and was known east of that point under one of its superinduced forms, as the Mohegan. Tbis term had beeo dropped by the Pe quods, if it was ever their specific cognomen, but it is a proof, and we think a very conclusive proof, nf the yet freshly remembered affiliation with Taminund" and the Manhattans, that Uncas, the moment be revolted from King Sassacus, assumed the name of a Mohegan, and put himself at the head of that tribe, as it then existed within the boundaries of Connecticul Or rather, he constituted the revolted Pequods a new tribe, under an old and respected name, and he thus laid the foundation of the Uncas dynasty. Placed thus by circumstances in a position in which he sought an alliance with the early colonists, and fuading his security in theirs, he was in fact the only leading chief of the times who, really; heartily, and faithfully sought their prosperity and growth to the end. The rise of Uncas and Connecticut thus began at one era; and ns the alliance was founded on mutual interest and safely, it only grew stronger with time. A man of less force of eharacter or natural sagacity than Uncas, would have vaeillated when he saw the colonists becoming more powerful and himself raore weak as years rolied on, end would have been seduced to enter into alliances for arresting the white man's powcr, as other native chiefs had done. But all history concurs in showing that, under every circumstance, and there were many of the most trying kind, he carried hiraself well, and avoided even a suspicion of his fidelity.

Uncas was well qualified for a tuler both in mind and person. He possessed a fine figure, over six feet in height, a commanding woice, and a noble bearing. He was mild yet dignitied in his manners. He was not

[^27]only wise in council, but brave* in war, as he evinced in many instances, but particularly in the battle of Sachem's Plain, in which he proved himself the bravest and most chivalrous of the brave. Yet his wisdom and moderation in governing his people, and the well balanced justice and consistency of his character, give him a still bigber reputation, and estublish his best claira to remembrance. In all the trials in which he was placed, in all the temptations he had to fly into a rage, and act out the savage, he sustained this character for wise deliberation; and by adhering to his first covenant with the English, and laying all his plans and grievances before the colonial courts, he raised himself in strength and reputation, and finaily triumphed, first over Sassacus, and then over Miontonimo, the two greatest and most powerful of his immediate contemporaries.
If Uncas was the patron of Connecticut, Miontonimo, with his family of the Narragansett chiefdom, was equally so of Rhode Island. Aud it is from this obvious fuct, probably, in part, that we find the historical notices of him, from the last quarter, decidedly more favorable to his general chnracter than those emanating from the land of his enemy and his conqueror, Uncas. While there is no disagtcement as to any historienl fact of note, it is natural that some little shade of feeling of this nature should remain. We have noticed a similar feeling with respect to existing tribes and chiefs, in the western world, where the inhabiunts never fail to be imbued with those peculiar notions and traditions of the particular tribe about them, which represent the latter as the principal nation, and invest them with tribal traits of snperiority. It is a feeling which leans to the better side of one's noture, and does hodor to men's hearts; but the historian is obliged to look at such questions with a colder eye, and can never abate a tittle of the truth, although he may run counter to this local sympathy and bias. We could name some remarkable instances of this prejadice, if we were willing to digress.

If Miontonimo be compared to Uncas, it will at once be scen that he lacked the latter's sagacity and firmness of character. Had the Narragansett listened to Sassacus, and formed a league with him, he would have crushed, for a time, the infaut colony of Connecticut. This be declined, apparently, because it had the specific character of enabling Sassacas to put down Uncas. After the Pequod king had been defeated and

[^28]fled to the Mohawks, Miontonimo was left in a position to assume the Pe quod's policy, and then tried to bring Uneas into just such a combination to fall on the colonists, as he had himself refused, when the proposition came from Sassacus. As Uncas not only refused, but laid the scheme before bis allies, Miontonimo went to war against him, with a large army. Uncas hastily prepared to meet him, with a smaller force. They met on Sachem's Plain, on the banks of the Shatutucket. Uncas, unwilling to see so many of his people slain in battle, nobly stepped forward and proposed a personal combet, to decide the question of who should rule, and who obey. It was declined, but the moment the reply was made, he threw himself on the plain, a signal, it scems, for his men to advance, and they came on with such an impulse, that he won the day and took Miontonimo prisoner. This capture was the act of one of his minor chiefs; but when his enemy was brought before him, he declined exercising his rigbt of putting bim to death, but determined to refer the matter to the authorities of Harford. There it was found to be a knotty question, and finally referred to the General Court at Boston. The Court strengthened itself with the opinions of six distinguished clergymen and several eminent civilians; and then decided, that the Narragansett chief bad justly forfeited his life, by violating his political covenants with the colonies, but it might not be taken away by them. He must be remanded to Uncas, within his jurisdiction, and by him be execnted; but it was eujoined, with a very poor compliment to the known mildness of the character of Uncas, that no needless cruelty sbould be practised. Here, then, the white man evinced less mercy than the red had done Miontonimo was now released from his confinemeut, and conducted back to the very spot where he had fret been taken prisoner, as he appronched which, one of the Mohegans who accompanied him, keeping him in entire ignorance of his kate, raised his tomahawk as he walked behind him, and laid him dead at a blow.

Whether the moral responsibility of this execution rests with the court, or the executioner, we do not propose particularly to inquire, nor to ascertain to what degree it was sbufled off, by directing an Indian to commit an act which it was unlawful for a white man and a Christian to perform. Had Uncas slain his adversary in cold blood, after the nction, the thing would have been in perfect accordance with Indian law. Had Miontonimo been a subject of either of the colonies of Connecticus, Rhode Island, or Massachusetts, and levied war, or committed ony overt act of treason, his execution would have heen in accordance with the laws of civilized nations. Neither condition happened. It was, however, felt, that the great disturber of the colonies, after Sassacus, had now been caught. He had violated his covenant by going to war without apprising them. They did not believe he would beep any future covenants. The moral seuse of the community would not be shocked, but rather gratified by his execution. This point was strongly signified to the court. But they could
not legally compass it. English law opposed it. The customs of civit ized nations, in warring with each other, opposed it. Should a different rule be observed towards the aborigines? Did the dictates of sound judgment and common sense, did the precepts of Christianity,-aye, "there was the rub,"-did the precepts of Christianity sanction it? On full de-liberation,-for the question was not decided in baste,-neither of these points could be affirmatively answered. But while policy-the policy of expedicncy, the lust of power, and the offended moral sense of an exposed and suffering community demanded, as it was thought, the death of the sachem, still it was not found that one whom they had ever treated, and then vicwed, ns a foreign prince, legally considercd, could be thus deprived of his life. Imprisonment was not, as a permanent policy, resolved on. There was one course left to escape both dilemmas, and to avoid all censure. It was to restore things to the precisc footing they had before his surrender. It was to hand him back to Uncas, without the expression of any decision, leaving that chicfain to act as he deenned fit T'bey remanded him indeed, but went one step too far, by first deciding in a formal court, after months of deliberation, in the course of which the elergy and gentry, (this is a term that would be proper to the times) bad been formally consulted, and directed his death, stipulating oniy that he should not be killed with cruelty. If there was not something that smacks of the want of true and noble dealing in this-if it accorded with the bland precepls of Christianity, to do unto others as you would that others should do unto you-if the act did not, in fine, partake of the vary spirit of Jesuitism in the worst seuse in which the word has bcen adopted into the language, we have, we confess, formed a totally wrong idea of its meaniug.

A case, in some respecta similar to this, happened in modern times, which may be thought to contrast rather strongly with the atove example of Puritan mercy. The reasons for a capital punishment, were, indeed, far more cogent, and the community called out strongly for it, and would have sustained it It was the capture of Black Hawk, which, it will be recollected, took place during the first Presidential term of General Jackson. Black Hawk had levied war within the boundaries of one of the States, on lands ceded by treaty, and organized a confederacy of Indian tribes, which, though broien up in part, chiefly through the failure of the other tribes to fulfit their engagenents with him, yet required for its suppressiun the entire disposahle force of the Union. The Sac chief was finally captured on Indian territory, in the act of flecing west of the Missisappi. He was imprisoned, and the case referred to the Goverament for decision. He had broken his treaty covenants. He had not only made war, but in its outlicak and its continuance, had been guity of countenancing, at least, the most shocking barbaritics. He had, indeed, opened the scene by cruelly murdering the agent of the Government the repre sentalive of the President, in the person of Mr. St. Vrain. The commu-
nity, the western States particularly, called loudly for his execution. There could be no security, it was said, if such a bloody fellow was alallowed to roam at large. He had forfeited bis life a chousand times. There was, indeed, the same popular feeling against him, which had existed in New England, one bundred and ninety years before, against Miontonimo. But could be have been legally executed? And if so, was it indeed, the true policy? Was it noble-was it bigh-minded? Was it meting out exnct and equal justice to men with red skins, as well as white? It was thought that all these questions must be negatively answered ; and the bold Sac insurgent was sent home, accompanied by an officer of the army, to secure his comfort and safety, and thus to see that a wise and merciful decision should be faithfully carried out, and popular indignation be prevented from wreaking ilself, in the assassination of the chief.

In closing these remarks, it may appear selfish to express the bope, that Mr. Stone, to whom we are already indehted for these apirited, comprehensive, and well written volumes, should still further employ his pen in adding to the sum of these obligntions. But he has so well studied the field in its historical hearing, so far at least as relates to the eastern department of the Union, that we know of no one to whom the labour would present less of the character of a tagk. We are in want of a good account of Philip, or Metacom, the energetic sachem of the Pokenokets, who impersonated so fully the wild Indian character, and views, and battled so stoutly against the occupancy of New England by the Saxon race. In showing up to modern times such a man, we think a biography would dorive very deep interest, and it would certainly be a new experiment, to take up the aboriginal views and opinions of the invading race, and thus write, as it were, from woithin, instead of without the circle of warlike action. In this way, their combibations, eflorts and power, would better appear, and relound more to the credit of the aboriginal actors, as warriors and herues. As it is, bistory only alludes to them as conspirators, rebels, traitors, or culprits ; as if the fact of their opposing the egress of civilized nations, who were in all respects wiser and better, were sufficient to blot out all their right and claim to the soil and sovereigaty of the land of their forefathers, and they were in fact bound to stand back, and give it up notens volens.

We bad designed to subjoin a few remarks on the biographical labors of other writers in this department, particularly those of Thatcher and Drake, but our limits are already exhausted, and we must abandon, or at least, defer it.

## H 0 R $\mathbb{E}$ INDIC .

## PERSONAL REMINISCENCES.

## [continued mox no. v.]

Herculanevu had nothing in common with its sombre Italian protolype, which has been dug out of dust and ashes in modern times, but its name. Instead of huriod palaces and ruins of a luxurious age of marble, hronze and silver, most of the houses were built of squared oak logs, and had hulky old fashioned chimneye, built outside with a kind of castelated tir, as they are seen in the old French and Dutch settlements in Canada, and along the vallies of the Hudson and Mohawk. The ars of painting and gilding' and comices, had not yet extended their empire here. Mr. Austin's residence, was the only exception to this remark, I remember. The Courts of Justice were content to hold their sessions in one of the oaken timber huildings named; the county jail had a marvellous resemblance to an ample smoke-house, and my kind host, Ellis, who was a native of South Carolina, was content to serve up substantial and good cheer in articles, not exhurned from a city buried in volcanic ashes, but in plain fabrics of Staffordshire and Birmingharn. In addition to the host-like and agreeable resort, which travellers unexpectedly found at his hands, in a mansion whose exterior gave no such signs, he presided over the department of a public ferry, esublished at this place, across the wild and fluctrating Mississippi; and had he kept note book, he could hare given account of many a one, from other lands, with golden hopes of the far west, whom he had safely conducted, against the most adverse floods, to the Missouri shore. I found a few old hooks at his house, which showed that there had been readera in his family, and which helped to while away moments, which every traveller will find on his hands.

I have insimated that there was nothing in the way of the antique, in Herculaneam, but its name. To this I might add, that there was no exception, unless it be foumd in the impressions of objects, in the structure. of the rocks, in this quarter, denoting a prior age of existence. I was shown on impression, in the surface of a block of limestone, quarried here, which wes thought to resemble a man's foot. It did not appear to me to bear this similitude, hut was rather to be referred to some organic extinct forms, which are not yet well understood.

Having passed a couple of days here, I set out early one moraing,
on foot, for Et. Louis, accompanied by two young men from Pennsyivania, with whom I had become acquainted on prior parts of my route. They had come with an adventure of merchandize from the waters of the Yioughagany, and were desirous of seeing the (then) capitol of the Territory. Nothing untoward occurred, until we reached and crossed the river Merrimack, where night overtook us, and set in with intense darkness, just as we reached the opposite shore. There was but one house in the vicinity ; and not distant more than a mile, but such was the intensity of the derkness, owing to clouds and a gathering storm, that we loet the road, wandered in the woods for some hours, during which the rain commenced, and were at length directed to the house we sought, by the faint and occasional tinkling of a cow bell.

We travelled the next morning twelve miles, to breakcast at the antique looking village of Carondalet The route liea over an elevated tract of uplands, eligibly situated on the right bank of the Missiseippi, in which a growth of wild prairie grass and flowers, filled up the broad spaces between the crees There was no habitation visible on the route-a standing spring under a ledge of rocks, about half way, was the only spot where we could get a drop of water to allay our thirst-for it was a hot August day. We encountered several deer, and from the frequent occurrence of tbeir tracks, deemed such an occurrence to be common. It is on this elevated and airy tract, that the site of Jefferson Barracks, has since been judiciously eatablisted by the government.

Bayond Carondalet, the country has the appearance of a grown-up heath. It is a bushy uninviting tract, without mature forest trees. The moat interesting feature we saw, conaisted of a number of regular depres sions, or cup-shaped concavities in the soil, caused by the passage of springs over a clay basia, upon which there is deposited a heary diluvial stratum of sand, mixed earth and pebbles. Within about three miles of the ciry, this heathy and desolate tract begon to assume a culcivated character ; dwellinge and gardens soon succeeded, and we found ourselves, hy almost imperceprible grades, introduced into the eity, which we reached about fout o'clock in the afternoon. On entering its ancient Spanish barriers, we noticed ane of tha old stone towers, or defences, which constituted a pert of the enclosure. This town, I afterwards learned, had been regularly walled and forified, during the possession of the country by the Spanish crown. As coon as I had taken lodgings, I called on R. Pettibone Esq., a friend formerly of Vemon, in western N. Y. who had cetablished himself in this central ejty of the west, in the practice of the law; he was not in, at the moment, hut his family received me with cordiality. He returned my visit in the evening, and insisted on my taking up my quarters at his house. The time that $I$ spent here, was devoted to the most prominent objects which the town and its vicinity presented to interest a suranger, such as the private maseum of the hate Gen. Wm. Clarle,
containing many articles of rich and valuable Indian costume; the large natural mounds above the city, and the character of the rock formation along the shores of the river, which was said to have had the impressions of buman feet on its original surface. The latter I did not see till the summer of 1821, when the block of stone containing them was examined in Mr. Rapp's garden, at Harmony, on the Wabasb.

My inclinations having led me, at this time, to visit the extensive lead mines, southwest of this city, on the waters of the Merrimack, I lost no time in retracing my way to Herculaneum, by descending the Mississippi.
When I was prepared to deacend the river, the two gentiemen who had been my traveling companions, on the journey up, had completed the business of their adventure, and offered mea seat, in a small boat, under their control. It was late in the efternoon of the day that this arrangement was proposed, and it was dusk before we embarked; but it wes thought the village of Cahokia, some five or six miles below, could be reached in good season. A humid and misty atmosphere rendered the night quite dark, and we soon found ourselves afloat on the broad current of the stream, without knowing our pasition, for it was too intensely dark to descry the outlines of either shore. Being in a light open boat, we were not only in some peril, from running foul of drifting trees, but it became disagreeably cold. On putting in for the Illinois shore, a low sandy bar, or shoal was made, but one of my companions who had landed came running back with an account of a bear and her cub, which caused us to push on about a mile further, where we passed the night, without beds or fire. Daylight disclosed to us the fact that we had passed CahoLia; we then crossed over to the Missouri shore, and baving taken breakfast at Carondaleh, continued the voyage, without any further misadrenture, nad reached Herculuneum at noon.

I lost no time in preparing to visit the mines, and having made arrangementa for my baggage to follow, set out on foot for Potosi. The first day I proceeded eighteen miles, and reached Steeples, at the head of the Zwoshau, or Joachim river, at an early hour. The day was excessively hot, and the road lay for the greater part of the distance, over a ridge of land, which afforded no water, and very litle shelter from the sun's rayz I met not a solitary individual on the route, and with the excepcion of the small swift footed lizard, common to the way side, and a single wild tarkey, nothing in the animal kingdom. The antlers of the dear frequently seen above the grass, denoted it however to ebound in that animal. I was constrained while passing this dry tract, to allay my thirst at a pool, in a rut not, however, without having disconcerted a wild turkey, which had come apparently for the same purpose.

Next day I crossed the valley of Grand or Big river, as it is cornmonly called, and at the distance of twelve miles from the Joachim, I entered the mining village of Shibboleth-the feudal seat, so to say, of the noted
"John Smith T." of whose singularities rumour had already apprized me. Here was a novel scene. Carts passing with loads of oremsmelting furnaces, and fixtures, and the half-hunter, half-farmer costumes of the group of men who were congregated about the principal store, told me very plainly, that I was now in the mining region. Lead digging end diacovering, and the singular hap-hazards of men who had suddenly got rich by finding rich brds of ore, and suddenly got poor by some folly or extravagance, gave a strong colouring to the whole tone of conversation at this spot, which was carried on neither in the mildest or mast unobtrusive way: quite a vocabulary of new technical words burst upon me, of which it wbs necessary to get the correct import. I had before heard of the pretty term, "mineral blossom," as the local name for radiated quartz, but here were tiff (sulphate of bargtes), glass-tiff (calcareous spar), " mineral sign," and a dozen other words, to be found in no books. At the head of these new terms stood the popular word "mineral," which invariably meant galena, and nothing else. To hunt mineral, to dig mineral, ond to smeit mineral, were so many operations connected with the reduction of the ores of gulena.

I soon found the group of men thout tho village store, was a company of militia, and that I was in the midst of what New Yorkers call a "training," which explained the hunter aspect I had noticed. They were armed with rifies, and dressed in their every day leather or cotton hunting ehirts. The officers were not distinguished from the men, either because swords were not easily procured, or more probably, because they did not wish to appear with so inefficient and uscless an arm. "Food for powder," was the first term that occurred to me on first surveying this group of men, but nothing coukd have been more inapposite; for although like "lean Jack's" men, they had but little skill in standing in a right line, never were men better skilled for personal combat,-from the specimens given, I believe there was hardly a man present, who could not drive a bullet into the size of a dollar at a hundred yards. No man was better skilled in this art, eitber with rifle or pistol, than the Don of the village, the said John Smith T., or his brotber, called "the Major," neither of whom travelled, or eat, or slept, as I afterwards witnessed, without their arms. During my subsequent rambles in the mine country, I have sat at the same table, slept in the same room, and enjoyed the conversation of one or the other, and con say, that their extraordinary habit of going fully armed, was onited in both with courteous manners, honourable sentiments, and high chivalric notions of personal independence; and I had occasion to notice, that it was none but their personal enemies, or opponents in business, that dealt in vituperation against them. John Smith T. was doubtless a man of singular and capricious humours, and a most fiery spirit, when aroused; of which scores of enecdotes are afloat. He was at varinnce with several of hin most conspicuous neighbours, and, if he be likened to the lion of
the forest, it will be perfectly just to add, that most of the lesser animats stood in fear of him.

My stop here had consumed some time, but thinking I could still reach Minè a Burton, I pushed on, but had only proceeded a couple of milea when I was hastily compelled to seek shelter from an impending shower. As it was late, and the storm continued, I remained at a farm house, at Old Mines during the night. They gave me a supper of rich fresh milk and fine corn bread. In the morning, a walk of three miles brought me to Potosi, where I took lodgings al Mr. Ficklin's, proprietor of the principal ina of the place. Mr. F. was a native of Kentucky, a man of open frank manners, and most kind benevolent feelings, who bad seen much of frontier life, had lived a number of years in Missouri, and now at a rather advanced period of life, possessed a fund of local hoowledge and experience, the communication of which rendered the time I spent at bis house both profitable and pleasing.

I reached Potosi on the second of August The next day was the day of the county election*, which brought together the principal miners and agricultural gentemen of the region, and gave me a favourable apportunity of forming acguainance, and making known the object of my visit I was particularly indebled to the civilities of Stephen F. Austin, Esq. for these introductions. During my stay in the country he interested himself in my success, omitted no opportunity of furthering my views, and extending my acquaintance with the geological features and resources of the country. He offered me an apartment in the old family mansion of Durham Hall, for the reception and accumulation of my collecions Mr. Bates and sons, Mr. Jones and sons, Mr. Perry and brothers, Mr. Elliot, Mr. Brickey, Mr. Honey and others, seconded these civilities. Indeed the friendly and obliging disposition I uniformly met with, from the inhabitants of the mines, and the mine country generally, is indelibly impressed on my memory.

I was now at the capiral of the mines, and in a pasition most favourahle for obtaining true information of their character and value. Three months devoted to this object left searcely a nook of the country which I had not either personally explored, or obrained authentic information of. found forty-five principal mines, or mineral diggings as some of them are called, within a circumference of less than forty miles. Potosi, and its vicinity yielded annually about three millions of pounds of lead, and furnished employment to the estimated oumber, of eleven to twelve hundred hands. The business was however depressed, like almost every other hranch of domestic arts or iodustry, after the peace of 1814 , owing to the great influx and low prices of

[^29]Soreign products, and the general derangement of currency and credit Prepared ore, delivered at the furnaces, was worth two dollars per cwt, paid chiefly in merchandize. Pig lead sold at four dollars, at the mines; and but half a dolinr higher on the banks of the Missisippi, and was quoted at seven dollars in the Athantic cuties. Judged from these data, there appeared no adequate cause for the alleged depression; for in addition to the ordinary merchant's profit, in the disposition of his stock to the operative miner or digger of ore, a profit of one cent and a half per pound was left, over and above the cost of transportaion to an eastern market; besides, the difference in exchange, between the south western and eastem cities. And it was evident, from a view of the whole subject, that the business could not onty ba profitably pursued, with economical arrangements, but that the public domain, upon which most of the mines are sented, might be made to yield a revenue to the treasury, at least equal to the amount of this article required for the national consumption, over the expenses, the superintendence and management. Beeides which, there was great room for improved and economical modes of mining; and there was hardly one of the manipulations, from the making of a common drill or pick, to the erection of a smelting furnace, which did not admit of satutary changes for the better. The recovery of the mere waste lead, in its sublimated form, around the open log furnaces of the country, promised to add a valuable item to the profit of the business. The most wasteful, hurried, and slovenly of all systems is pursued in exploring and raising the ore, by which the surface of the country is riddled with pit holes, in the moor random manner ; the loose and scattered deposits in the soil bastily gathered up, and the real lead and veins of metal left, in very many cases, untouched. Thousands of square acses of land were thus partially rifed of their riches, and spoiled, and condernned, without being exhausted. By having no scientific knowledge of mineral veins and geological structare, as practically adopted in Europe, all rule in the process of mining and raising the ore had degenerated into mere guess work, and thousands of doliars had been wasted, in some places, where the application of some of the plainest mining principles, would not bave warrsited the removal of a shovel full of earb. In short, there was here observed, a blending of the minor and farmer character. Alrnost every famer was a miner. Planters who had slaves, employed them part of the year in mining; and every miner, to some extent was a farmer. Because the ore found in the clay beds did not occur in east and west, or north and south lines, or its rules of deposition had not been delermined by careful observalion, all success in the exploration was supposed to be the result of chance. And whoever surveys the mineral counties of Missouri, will be ready to conclude, that more labour has been thrown away in the helter-akelter sybterm of digging, than was ever applied to well directed or profitable
mining. Had an absolute monarch called for this vest amonnt of labour from his people to huild some monument, he would have been declared the grealeat tyrant Indeed, I know of no instance in America, of the misapplication of so great an amount of free labour-labour cheerfully bestowed, and thrown away without a regret. For the losers in mining, like the adventurers in a lottery, have no one to blame but thermselves.

It appeared to me that a statement of the actual condition of the mines, would be received with altention at Washington, aad that a system for the betuer mazagement of thera could not but be approved, were it properly hrought forward. I determined to make the atterpt It did not, however, appear to me, that nature had limited the deposits of ore to one epecies, or to so limited an area, and I sought means to extend my personal axaminations farther west and south. To bring this about, and to collect the necessary information to base staternents on, in a manner correapondent to my wighes, required time, and a systematic mode of recording facts.

To this object, in connexion with the natural history of the country, I devoted the remainder of the year, and a part of the following year. I soon found, after reaching the mines, that I had many condjutors in the business of collecting specimens, in the common miners, some of whom were in the habit of laying aside for me, any thing they found, in thair pits and leads, which assumed a new or curious character. Inquiries and applications relative to the mineralogy and structure of the country were made, verbally and by letter, from many quarters. I established ny residence ar Potosi, but made excursions, from time to time, in various directions. Some of these excursions were fruiful of incidens, which would be worlh recording, did the cursory character of these reminiscences permit it On one occasion, I killed a horse by swimming him across the Joachim river, at is mouth, whilst he was parm and foaming from a hard day's ride. He was put in the stable and autended, but died the next day, as was suppored, from this sudden transition. There was scarcely a mine or digging in the country, for forty miles around, which I did nat personally examine; and few persons, who had given attention to the subject, from whom $I$ did not derive some apecies of information.

The general hospitality and frankness of the inbabitants of the mine country could not but make a favourable impression on a stranger. The custom of riding on horseback, in a region which affords grest facilities for it makes every one a horseman and a woodsman, and has generated something of the cavalier air and manners. But notbing impressed me more, in this connexion, than the gallant manner, which I observed hera, of putting a lody on horseback. She stands facing you, with the bridlo in her right hand, and gives you her len She then places one of her fees in your left hend, which you stoop to receive, when, by a simultaneous exertion and spring, she is vauled backwerds into the saddle. Whether
this be a transmitted Spanish custom, I know not, but I have not obeerved it in the French, or American sealementes west of the Alleghanies.

The earthquakes of 1812, which were so disastrous in South America, are known to have propagated themselves towards the north, and they exerted some striking effects in the lower part of the velley of the Mississippi, sending dowa into the channel of the latter, large areas of deluvial earth, as was instanced, in a remarkable manner, at New Madrid. Portions of the forest, back of this town, sunk, and gave place to lakes and lagoons. These effects were also witnessed, though in a milder form, in the more solid formations of the mine country. Soon after reaching Poosi, I visited the Mineral Fork, a tributary of the Merrimack, where some of these effects had been wituessed. I descended into the pit and crevices of the Old Mines. These mines were explored in the melalliferous rock. Every thing had an old and rainous look, for they had been abandoned. Large quantities of the ore had been formerly raised at this mine, which was pursued into a deep fissure of the limestone rock. I deacended into this fissure, and found among the rubbish and vein etones, large elongated and orbicular masses of cale spar, the outer surfaces of which borestrong marks of geological abrasion. They broke into rhombe very transparent, and of a honey-yellow colour. Mr. Elliot, the intelligent proprietor of this mine, represented the indications of ore to have been flauering, although every thing was now at a stand. Masses of sulpharet of zinc, in the form of blende, were noticed at this locality. Mr. Elliot invited me to dine, and he filled up the time with interesting local reminiscences. He stated, among other facts, that a copious spring, at these mines, dried up during the remarkable earthquaikes of 1812 . These earthquales appear to have discharged their shocks in the direction of the atratification from the southwest to the northeast, but they spent their force west of the Mississippi. Their chief violence was at Natchitoches and Now Madrid, at the latter of which they deatroyed an immense area of alluvial land. Their effects in the Ohio valley, lying exactly in the direction of their action, were slight. A Mr. Watkins, of Cincinnati, accompanied me on thit examination, and rode brck with me to Potasi.

On the 9th of August, I had dined with Samuel Perry, Esq., at Mine \& Burton, one of the principal inhabilants of the county, and was passing the evening at Mr. Austin's, when Mr. end Mrs. Perry came saddenly in. They had hardiy taken seats, when a rabble of persons with bells and horna aurrounded the house, and kept up a tumult that would have done honor to one of the wildeat festivals of St. Nicholas, headed by Brom Bones himself. This, we were told, was a Chiraviri. And what is a Chiraviri? I am not deep enongh read in French local customs to give a satisfactory answer, but the custom is said to be one that the populace may indulge in, whenever a marriage has taken place in the village, which is not in eract eccordance with their opinions of its propriety. I was, hy this incident, in-
formed of Mr. Perry's recent marriage, and should judge, moreover, that he had exercised both tasto and judgment in his selection of a parner. The affair of the Chiraviri is said to have been got up by some spiteful persons.

Towards the middle of the month (12th,) I set out, accompanied by Mr. James B. Austin, on horseback, for Herculaneum, by the way of Hazel Run, a route displaying a more southerly section of the mine country than I had before seen. A ride on horgeback over the mine hills, offers one of the most delightful prospects of picturesque sylvan beauty that can be well conceived of. The hills are, with a few exceptions, not precipitons enough to make the ride irksome. They rise in long and gentle awells, resembling those of the sea, in which the vessel is, by an easy motion, at ternately at the top of liquid hills, or in the bottom of liquid vales. From these hills the prospect extends over a surface of heath-grass and prairie flowers, with an open growth of oaks, giving the whole country rather the aspect of a park than a woilderness. Occasionally a ridga of pine intervenes, and wherever there is a brook, the waters present the tranparency of rock crystal. Sometimes a range of red clay hillocks, potting up rank shrubs and vines of species which were untwoun beforc, indicates an abandoned digging or mine. Farms and farm houses were then ferv; and every traveller we met on horseback, had more or lest tha bearing of a country cavalier, with a fine horse, good equipments, perhapa holsters and pistols, sometimes a rifle, and alwayb sometbing of a military air, betokening mandiness and independence. Wherever we stopped, and whoever we met on the way, there wat evinced a courteons and hospitable disposition.

We did not leave Potosi till afiernoon. It was a hot August day, and is was dusk before we entered the deep shady valley of Big River. Some delay arose in waiting for the ferryman to put us across the river, and it was gine o'clock in the evening when we reached Mr. Bryant's, at Hazel Run, where we were cordially received. Our host would not let us leave his house, next morning, till after breakfast. We rode to McCormick's, on the Platten, to dinner, and reached Herculaneum before sanset. The distance hy this route from Potosi is forty fire miles, and the read, with the exception of a couple of miles, presented a wholly new section of the country.

The Mississippi was now low, displaying large portions of its margin, and exhibiting heary deposits of mud and slime, which broka into cakes, as they dried in the sun I know not whether these exkalations affected me, but I experienced a temporary illness for a few dayd during this visit. I recollect that we had, during this time, some severe and drenching rain storms, with vivid and copious lightning, and heavy pealing thunder. These drenching and rapid showers convert the brooks and rille of the mine counury to perfect torrents, and this explains one cause of the wabr
ing away and gullying of roads and streets, so remarkable on the weat benk of the Mississippi. My illness induced me to give up returning on horseback ; and I set out, on the 184h of the month, in a dearborn, accompanied by Mre Austin. On descending the long hill, near Donnell's, beyond the Joachim, the evening was so dark that I became sensible I muat have got out of the road. I drove with the more care a few moments, and stopped. Requesting Mrs. Ausin to hold the reins, I jumped out and explored the ground. I found myself in an abandoned, badly gullied track, which would have soon capsized the wagon; but leading the horse by the bridle, 1 slowly regained my position in the direct road and got down the hill, and reached the bouse without further accident Nextday we drove into Potosi by four o'clock in the affernoon. This was my second visit, and 1 now accepted a room and quarters for my collection, at their old homestead called Durham Hall.

From this period till the middle of September, I pursued with unremiting assiduity, the enquiry in hand, and by that time had made a cabinet collection, illustrating fully the mineralogy, and, to some eartent, the geological structure of the country. I erected a small chemical furnace for assays. Some of the clays of the country were found to stand a high heat, and by tempering them with pulverized granite, consisting largely of feldspar, I ohtained crucibles that answered every purpose. Some of the specimens of lead, treated in the dry way, yielded from 75 to 82 per cent

Accident threw in my way, on the 25th of Angust, a fact which led to the discovery of a primitive tract, on the southern borders of the mine country, the true geological relation of which to the surrounding secondary formations, formed at the outset rather a puzzle. I rode out on horseback on that day, with Mr. Stephen F. Austin, to Miller's, on the Mineral Fork, to observe a locality of manganese, and saw lying, near his milla, some large masses of red syenitic granite, which appeared to have been freshly blasted. He remarked that they were obtained on the St. Francis, and were found to be the best material at hand for millstones. On examination, the rock consised almost exclusively of red feldspar and quartz. A little hornblende was present, bat scarcely a trace of mica. This species of syenitic granite, large portions of which, viewed in the field, are complete syenite, and all of which is very barren of crystals, I have ence found on the upper Mississippi, and throughout the northwestern regions above the secondary latitudes. The hint, however, was not lost I took the first opportunity to visit the sources of the St. Francis: having obtained letters to a genteman in that vicinity, I set out on horseback for that region, taking a stout pair of saddle-bags, to bold my collections, I passed through Murphy's and Cook's settiements, which are, at the present time, the central parts of St Francis county. Mine a la Mothe afforded some new facte in its mineralogical features. I first saw this red
eyenite, in place, on Blackford's Fork. The westermost limits of thin ancient mine extends to within a mile or two of this primitive formation The red clay formation extends to the granitic elevations, and conceali heir junction with the newer rock. The nearest of the carboniferow series, in place, is on the banks of Rock Creek, at some miles' distance. It is there the crystalline sandstone. How far this primitive district of the St. Francis extends, has not been determined. The St. Francis and Grand rivers, both have their sourcea in it. It is probable the Ozaw Fork of the Merrimack comes from its western borders. Not less than twenty or thinty miles can be assigned for its nont and south limits. The Iron mountain of Bellvieu is within it. The vicinity of the pass called the Narrows, appeare to have been the locality of former volcanic action. A scene of ruder disruption, marked by the vast accumulation of broken rock, it would be dificult to find. Indeed the whole tract is one of high geological, as well as scenic interest Had the observer of this scene been suddenly dropped down into one of the wildest, broken, primitive tracts of New England, or the north east angle of New York, he conld not have found a field of bigher physical attractions. Trap and greeratone constitute promioent tracts, and exist in the condition of dykes in the syenite, or feldspathique granite. I sought in vain for mica in the form of distinct plates. Some of the greenstone is handsomely porphorytic, and embraces green crystals of feldspar. Portions of this rock are sprinkled with masses of bright sulphuret of iron. Indeed iron in several of its forms abounds. By far the largeat portion of it is in the shape of the micaceous oxyde. I searched, without success, for the irridescent specular variety, or Elba ore. In returning from this trip, I found Wolf river greatly swollen by rains, and had to swim it at much hazard, with my saddle-bags heavily laden with the resulta of my examination. It was dark when I reached the opposite bank: wet and tired I pushed for the only house in sight As I came to it the doors slood open, the fences wera down, a perfect air of desolation reigned around. There was no living being found; and the masses of yawning darkness exhibited by the untenantod rooms, seemed a fit residence for the genius of romance. Neither my horse nor myself were, however, in a temper or plight for an udventure of this kind, and the poor beast seemed as well pleased as I was, to push forward from so cheerless a spot. Four miles' riding through an untenanted forest, and a dark and blind road, brought us to a Mr. Murphy's, the sponsor of Murphy's settlement.

Litile Tokile was a Miami, yet Little Turtle made a visit to Kentucky, and induced its legislature to pass a law agaiost the sale of ardent spirits to the Indian race.

## THE RABID WOLF.

A VERITABLE THADIION OF THE VALLEY OF THE TAWASENTHA

The great Pine Plains, beginning not far south of the junction of the Mohawk with the North River, are siill infested by wolves, who harbour in its deep gorges, from which they sally out at night, on the sheep-folds of the farmers, and often put a whole neighbourhood in fear. The rait road track from Albany to Schenectady, passes over a part of these pleins, which stretch away in the direction of the blue outlines of the Helderberg mountains. It is many miles acroas the narrowest part of them, and they reach down to the very outskirte of the city of Albany, where they have of late years, and since Buel's day, begun to cultivate them by sowing clover, planting fruit trees, and in other ways. They constitute the table land of the county, and send out from beneath their beary mass of yellow sand and broken down sand stoaes, mice slates, and granites, many springs and streams of the purest and moss crystalline watere, which find their outlets chiefly into the valley of the Tawasentho, or, as the river is called in popular language, the Norman's Kill, and are thus contributed to swell the noble volume of the Hudson. These springs issue at the procise point where the arenaceous mass rests on a clay or impervious basis. The effect, in ancient years, has been that the sand is carried off, grain hy grain, till a deep ravine or gorge is formed. The sides of this gorge being composed of mixed earth and some mould, and free from the aridity of the surface, bear a dense and vigorous growth of hard wood trees and shrubbery, and are often found to be encumbered with immense tronks of fallen pines and other forest rubbish, which renders it very difficult to penetrate them. It is into these dark gorges that the wolves retreat, after scouring the plains and neighbouring farms for prey; and here they have maintained their ancient empire from time immemorial. Such, at least, was the state of things between the sethlers and the woives, at the date of this story, in 1807.

Sometimes the whole country armed and turned out en masse, to ferret them out of their fastnesses and destroy them; and truly the forees asserabled on some of these wolf-hunts were surprising, and, in one respect, that is to say, the motley and uncouth character of their arme, they would have put both Bonaparte and Wellington to fight There was nothing, from a pitchfork to a heavy blunderbuss, which they did not carry, always excepting a good rifle, which I never remember to bave seen on these oecasions. Indeed, these formal turn-outs were better suited to frighten away, than to kill and capture the foe; so that there was no
just cause of surprise why the wolves remained, and even increased They still kept masters of the Plains-sheep were killed by dozens, night after night, and the alarm went on.

It was at oher times tried to trap them, and to beit them in sundry ways I recollect that we all had implicit faith in the village schoolmaster, one Cleanthus, who knew some Latin, and a little of almost every thing; and among other ars which be cherished, and denlt out in a way to excite wonder for his skill, he knew how to make the wolves follow his tracks, by smearing his shoes with msofedita, or some other substance, and then ansconcing himself at night in a $\log$ pen, where he might bid definnce to the best of them, and shoot at them besides. But I never could leara that there were any of these pestiferous animals killed, either by the schoolmaster and his party, or any other pary, cxcept it was the luckless poor animal I am about to write of, which showed its affinities to the canine race by turning rabid, and rushing at night into the midst of a popnlous manufacturing village.

Iosco was eligibly seated on the summit and brow of a picturceqne series of low crowned hills, just on the southern verge of these great Plains, where the tillable and settled land begins. It was, consequently, in relation to these wolves, a perfect frontier; and we had not only frequent alarms, but also the privilege and benefit of hearing all the wonderful stories of wolfadventure, to man and beast, for a wide circle. Indeed, these stories often came back with interest, from the German and Dutch along the Swarta Kill, and Bozs Kill setllements, away up to the foot of the Helderberg mountains. A beautiful and clear stream of sparkling cold water, called the Hungerkill, after gathering is crystal tributaries from the deep gorges of the plains, ran through the village, and afforded one or two seats for mills, and after pinding and donbling on its track a mile or two, rendered its pellucid stores into the Norman's Kill, or, as this alream was called by the ancient Mohawk race, in allusion to their sleeping dead, the Tawasentha. No stream in the country was more famons for the abundance of its fine brook trout, and the neighbouring plains served to shelter the timid hare, and the fine species of northern partridge, which is there always called a pheasant.

The viliage was supported by its manufacturing interests, and was quite populous. It bad a number of long strees, some of which reached across the atream, and over a spacious mill pond, and others swept at right angles along the course of the great Cherry Valley turnpike. In ita streets were to be heard, in addition to the English, nearly all the dialects of the German between the Rhine and the Danube; the Low Dutch as spoken by the common country people on the manor of Rensselaerwyck, the Erse and Gaelic, as not unfrequently used by the large proportion of its Irish and Scotch, and what seemed quite as striking to one brought up in seclusion from it, the genuine Yankee, as discoursed by
the increasing clans of factory wood choppers, teamsters, schoolmasters, men out at the elbowe, and travelling wits. The latter were indeed but a sorry representation of New England, as we have aince found it No small amount of superstitions were believed and recited in the social meetings of such a mired foreign population. Accounts of instances of the second sight, death-lights on the meadows and in the churchyard, the low howling of premonitory dogs before funerals, and other legendary wares, to eay nothing of the actual and reritable number of downright spooks, seen on various occasions, on the lands of the Veeders, the Van Valkenburga, the Truaxes, and the Lagranges, rendered it a terror to all children under twelve to stir out of doors after dark. There were in the annals of losec, several events in the historical way which served as perfect eras to its inhabilants; but none, it is believed, of so striking and general importance as the story of the Mad Wolf, of which I am about 10 write.

There had been found, soon after the close of the revolutionary war, in a dark wood very near the road, pieces of a cloth coat and metalic buuons, and other things, which rendered it certain that a man had been murdered at that spot, in consequence of which the place was shuaned, or hurried by, as if a spirit of evil bad its abode there. On another occasion, the body of a poor old man of the name of Homel, was found drowned deep in the Norman's Kill, clasped in the arms of his wife, both dead. A gendeman of standing, who ventured alone, rather groggy, one dark night, over the long unrailed bridge that croseed the mill pond, pitched upon some sharp pallisadoes in tbe water, and came to a melancholy end. Hormaun, an Iroquois, who baunted the valley, had killed, it was said, ninety-rine men, and was waiting an opportunity to fill his count, by dispacting his hundredth man. This was a greatly dreaded event, particularly by the boys. There was also the era, when a Race Course bad been established on a spot called the "Colonel's Farm" and the era of the "Deep Snow." There were many other events celebrated in Iasco, such as the De Zeng era, the Van Renssedeer era, and the Van Kleeck era, which helped the good mothers to remember the period when their children were born; but none, indeed, of so notable a character to youthful minds as the adventure of the mad wolf.

Wolf atories were in vogue, in fact, in the evening and tea party circles of Iosco for many years; and if one would take overy thing as it was given, there had been more acts of bravery, conduct, and firm decision of character and foresigbs displayed in encountering these wild vixens of the plains and valleys by night, than would, if united, hrve been suffcient to repel the inroads of Burgoyne, St Leger, or Sir John Jobnson, with Brant, and all his bosts of torics and Indians, during the American revolution.

I chanced one night to have left the city of Albany, in company with
one of these heroic spirits. We occupied my father's chaise, an oldfishioned piece of gentility now out of vogue, drawn by a prime horse, one which he always rode on parades. It was late before we got out of the precincts of the city, and up the hill, and night overtook us away in the pine woods, at Billy McKown's, a noted public-house seated half way between the city and Iosco, where it was customary in those days to halt; for besides that he was much respected, and one of the mast sensible and infuential men in the town, it was not thought right, whatever the traveller might require, that a horse should be driven eight miles without drawing breath, and having a pail of water. As I was but young, and less of a charioteer than my valiant companion, he held the whip and reins thus far; but after the wolf stories that poured in upon us at McKown's that evening, he would hold them no longer. Every man, he thought, was responsible to himself. He did not wish to be wolf's meat that night, so be hired a fleet horse from our host, and a whip and apurs, and set off with the speed of a Jehu, leaving me to make my way, in the beary chaise, through the sandy plains, as best I could.
In truth we had just reached the most sombre part of the plain, where the trees were more thick, the sand deep and heary, and not a bouse but one, within the four miles. To render it worse, this was the chief locality of wolf insolence, where he had even ventored to attack men. It was on this route too, that the schoolmaster had used his medical ares, which made it better known through the country as the supposed centre of their power. Nothing harmed me, however; the horse was fine, and I reached home not only uneaten, but unthreatened hy a woll's jaw.
But I must confine myself to the matter in hand. A large and fierce wolf sallied out of the plains one dark summer's oigbt, and rashed into the midst of the village, snapping to the right ond left as he weat, and biting every animal that came in his way. Cows, swine, pigs, geeseevery species, whether on four legs, or two legs, shared its malice alike. The animal seemed to have a perfect ubiquity-it was every where, and seemed to have spared nothing. It is not recollected that there was a single house, or barn-yard in the village, where something had not beeu bitten. If he had come on an errand of retribution, for the great and threatening wolf-parties which had gone out agninst his race, and all the oceult arts of the schoolmaster in trying to decoy them at Barrett's hollow, he could not have dealt out his venomous anaps more indiscriminately.

It must have been about midnight, or soon after, that the fearful visiter came. Midnight, in a country village, finds almost every one in bed, but such was the uproar among the animal creation, made by this strange interloper, that out of bed they soon come. The catlle bellowed, the pigs squealed, the poultry cackled-there must be something amiss. Senta Claus himself must be playing his pranks. "A wolf1" was the cry-" a wolf is commiting havoe." "It is mad!" came next on the roices of the
night "A mad wolf!-a mad wolf l" Notbing but a mad wolf could ventree alone into the heart of the rillage, and do so much mischief. Out ran the people into the streets, med, women and all. Some caught up guns, some clubs, some pitchforks. If the tories and Indians, in the old Freach war, bad broke into the settlement with fire and aword, there could not have been a greater tumult, and nothing but a mad wolf would have stood his ground. Where is he 3 which way did he run? who saw him? and a thousand like expressions followed. He had gone south, and south the mob puehed after him. He was away over on the strect that leads up from the middle factory. It was a cloudy night, or the moon only came out fitfully, and threw light enough to discern objects dimly, as the clouds rolled before it. Indistinct murmure came on the breeze, and at lengh the scream of a woman. The cause of it soon followed. The woll had biten Mrs. Sitz. Now Mrs. Sitz was a careful, tall, rigidfaced, wakeful housewife, from the dutchy of Hesse D'Armstadt, who had followed the fortunes of her husband, in trying his mecbanical skill in the precincts of Insco; but while her husband Frank laid fest asleep, under the influence of a hard day's labour, her eurs were open to the coming alarm. It was not long before the heard a tumult in her goose pen. The rahid animal had hounded into the midst of them, which created as great an outcry as if Rome had a second time been invaded. Out she ran to their relief, not knowing the character of the disturber, but naturally thinking it was some thief of a neighbour, who wished to make provision for a coming Christmes. The animal gave her one enap and leapt the pen. "Mein hemel !" screamed she, "er hat mein gehissen !" Sure enough tho wolf had hit her in the thigh.

The party in chase soon came up, and while some stopt to parley and sympathize with her, others pushed on after the animal-the spitzbug, as ahe spitefully called him. By this time the wolf had made a circuit of the southern part of the village, and scampered down the oid factory road, by the mill dam, under the old dark bridge at the saw mill, and up the hill by the old public store; and thus turned his course back towards the noth, into the thickest part of the village, where he had first entered. He had made a complete circuit. All was valour, boasting, and hot speed behind him, but the wolf had been too nimble for them. Unluckily for him, however, while the main group pushed bebind, just as he was scampering up the old store hill, he was suddenly beaded hy a party coming down it. This party was led by old Colonel S., a revolutionary soldier, a field-officer of the county militia, and the superintendent of the extensive manufacturing establishment from which the village drew its prosperity. He was armed with a fusil of the olden time, well charged, and having been roused from his bed in a hurry, could not at the moment find his bat, and clapt on an old revolutionary cocked hat, which bung in the room. His appearance was most opportune; he halted on the hrow of
the hill, and as the wolf bounded on he levelled his piece at the pasting fugitive, and fired. He had aimed at the shoulders; the fleetness of its speed, however, saved its vital parts, but the shot took effect in the animal's hind legs. They were both broken at a shot. This brought him down. The poor creature tried to drag himself on by his fore paws, hut his pursuers were too close upon him, and they soon dispatched him with hatchets and clube

Thus fell the rabid wolf, to be long talleed of hy men and boys, and put down as a chief item in village traditions. But the effects of his visit did not end here. In due time, syrmptoms of madness seized the caule and other animals, which had come within the reach of his teeth. Many of the finest milch cows were shoh. Calves and swine, and even poultry went rabid; and as thinge of this kind are generally overdone, there was a perfect panic in the village on the subject, and numbers of valuabla animals were doubtless shot, merely because they happened to show some resiveness at a very critical epoch

But what, methinks the reader is ready to ask, became of Mrs. Sitz? Whether it was, that she had brought over some mystical ants from the Wild Huntaman of Boheria, or had derived protection from the venom urough the carefully administered medicines of Dr. Crouse, who duly attended the case, or some inherent influence of the stout hearted woman, or the audacity of tho bite itself, had proved more than a match for the wolf, I cannot say; but certain it is, that while oxan and kive, swine and falings, fell under the virus and were shot, she recovered, and lived many years to scold her dozing husband Frank, who did not jump up immediately, and come to her rescue at the goose pen.

Indian Possessions.-The Ottoes own, at the latest accounts, a large tract of country on the Big Platte, west of the Missouri; they are a poor race of people, and receive a small annuity of 82,500 . The Pawnees are a powerful body, and number about 6,500 persons, divided into bands undar the names of Pawnee Loups, Grand Pawnees, Republican Pawnees, Pawnee Pics, \&c.; they are wild and furtive in their habils, and receive provisions aud goods. The Grand Nation is the Pottowatomies, or the "united bands of the Chippewas, Otawas, and Pottowattomies." They own five millions of acres of prairie lands, along the Missouri river to the Little Sioux, number about 2,000 , and receive 842,000 a year for their lands sold in Illinois and Michigan. They are a respectable body of Indinns, are good farmers, and educate their children. The payment of the annuities is always a season of great hilarity and festivity,-N. O. Pic.

## TALES OF A WIGWAM.

#### Abstract

It in a characteristic of mome of the Indian legend, that they convey a moral which erema clearly enongh to denote, that a part of theae legends were invented to convey irrifuction to the young folks who ligten to them. The known absence of alt harah methode among the Indieua, ia bringing up their children, favoars this idea. The following tale addremea inelf plainiy to girls; to whom it teaches the danger of what we denominate coquetry. It would seem from this, that beauty, and its concomitant, a pesion for drese, among the red daughters of Adam and Eve, bas the same tendency to create prido, and nouriab self-conceit, and belf-eateem, and anarne a tyranny over the human heart, which writers tell us, these qualities have among their white-akinned, anborn-haired, and blae-eyed progeny die wonld over. This tale has appeared in the "Columbian." The term Moowia is one of tho mont derogative and offenaive pomible It ia derived from the Odjibwa aubatanivo, mo, filth, or excrement.

## MOOWIS,

## THE MAN MADE UP OF RAGS AND DIRT.

## A TRADITIONAMY LEAEND O\% THE ODJPWA를

In a large village, there lived a noted belle, or Ma mon dá go kwz, who was the adrairstion of all the young hunters and warriore She wat particularly adrnired by a young rann, who from his good figure, and the care he took in his dress, was called the Beal-Man, or Ma mon dé gin in-e. This young man had a friend and companion, whom he made a confidant of his affairs. "Come," said he, one day in a sportive mood, "let us go a courting to her who is so hendsome, perhaps she may fancy one of us." But she would listen to neither of them, and when the handsome young man rallied from the coldness of her air, and made an effort to overcome her indifference, she put together her thumb and three fingers, and raising her hand gracefully towerds him, deliberately opened them in his face. This gesticulatory mode of rejection is one of the highest contempt, and the young hunter retired confused and abeahed. His sense of pride wan deeply wounded, and he was the more piqued, that it had been done in the presence of others, and the affair wns soon noised about the village, and became the talk of every lodge circla. Besides, he was a very sensitive man; and the thing so preyed upon hira, that he became moody, and at last took to his bed. He was taciturn, often lying for days without uttering a word, wibh his oyes fired on vacancy, and taking little or no food. From this state no efforts could rouse him ; he felt abeshed and dishonoured, even in the presence of his own relatives, and no persuasions could induce him to rise. So that when the camily prepared to take down the lodge to remove, he still kept his bed, and they were compelled to lif it over his head, and leave him upon his slin couch. It was a time of general removal and breaking up of the camp, for it was only a wis. tar's hunting camp, and as the season of the hunt was now over, and
spring began to appear, they all moved off, as by one impulee, to the place of their summer village, and in a short time, all were gone, and he was leff alone. The last person to leave him was his boon companion, and cousio, who has been mentioned as also one of the admirers of the forest belle. But even his voice was disregarded, and as soon as his steps died away on the crealing snow, the stillness and solitude of the wildarness reigned around.

As soon as all were gone, and he could no longer, by listening, henr the remotest sounds of the departing camp, the Beau-Man arose. It is to be understood that this young man was aided by a powerful guardian spirit, or personal Moneto ; and he resolved to make use of his utmost power to punish and humble the girl. For she was noted in the tribe for her coquetry, and had treated others, who were every way her equals, as she had done him. He resolved on a singular stratagam, by way of revenge For this purpose, he walked over the deserted camp, and gathered up all the bits of soiled cloth, clippings of finery, and cast off clothing, and ornaments which had either been left or lost These be carefully picked out of the snow, into which some of them had been trodden and parinliy buried, and conveyed them to one place. The moty heap of gaudy and soiled stuffs, be restored to their original beauty, and determined to make them into a coat and leggins, which he trimmed with beads, and finished and decorated after the best fashion of his tribe. He then made a pair of moccasins and garnished them with beads, a bow and arrows, and a frontlet and feathers for the head Having done this, he searched about for cast out bones of animals, pieces of skins, clippings of dried meat, and even dirt, and having cemented them together with snow, he filled the clothes with these things, and pressed the mass firmly in, and fashioned it externally in all respects, like a tall and well framed man. He put a bow and arrows in his hands, and the frontlet on his head. And having finished it, he hrought it to life, and the umage stood forth, in the mot favoured lincaments of his fellows. Such was the origin of Moowis, or the Dirt and Rag Man.
"Follow me," said the Beau-Man, " and I will direct you, how you shall act" He was indeed, a very sightly person, and as they entered the new encampment, the many colours of his clothes, the profusion of ormaments which he had managed to give him, and his fine manly step, and animated countenance, drew all eyes. And he was received by all, both old and young, with marks of attention. The chiel invited bim to his lodge, and be was feasted on the moose's hump and the finest venison.

But no one was better pleased with the handsome stranger than Ma mon da go kwe She fell in love with him at the first sight, and hewas an inviled guest at the lodge of her mother, the very first evening of his arrival The Beau-man went with him, for it was under his patronage that he had been introduced, and, in truth, he had another motive for accampanying him, for he had not yet wholly subdued his feelinga of admins-
tion for the object, againgt whom be had, neverheless, exerted all bin necromatic power, and he held himself sulject to any favourable turn, which he secretly hoped the visit might take, in relation to himself. But no such turn occurred. Moowis attracted the chief atention, and every eye and heart were alert to entertain him. In this effort on the part of his entertainers, they had well nigh revealed his true character, and dissolved him into his original elements of rags, and snow, and dirt; for he was assigned the most prominent place before the fire: this was a degree of heat which be could by no means endure. To ward it off he put a boy between himself and the fire. He shifted his position frequently, and evaded, by dexterous mancuvres, and timely remarks, the pressing invitation of his hoat to sit up, and enjoy it. He so managed these excuses, as not only to cooceal his dread of immediate dissolution, but to secure the further approbation of the fair foreat girl, who could not but admire one who had so hrave a spirit of endurance against the paralysing effects of cold.

The visit proved that the rejected lover had well calculated the effects of his plan. He withdrew from the lodge, and Moowis triumphed. Before be went, he saw him cross the lodge to the coveted abinos, or bridegroom's seat Marriage in the forest race, is a simple ceremony, and where the impediments of custom are small, there is but little time demanded for their execution. The dart which Ma mon dé go kwa had so often delighted in sending to the hearts of her admirers, she was at length fated herself to receive. She bad married an image. As the morning begun to break, the stranger arose and adjusted his warrior's plumes, and took his forest weapons to depart. "I must go," said be, "for I have an important business to do, and there are many hills and rreams between me and the object of my journey." "I will go with you," she replied. "It is coo far," he rejoined, "and you are ill able to encounter the perils of the way." "It is not so far, hut that I can go," she responded, "and there are no dangers which I will not fully share for you."

Moowis returned to the lodge of his master, and detailed to him the events we have described. Pity, for a moment, seized tho brenst of the rejected youth. He regretted that she shouid thus have cast herself away apon an image and a shadow, when she might have been mistress of the best lodge in the bend. "But it is her own folly," he said, "she has turned a deaf ear to the counsela of prudence, and she must submit to her fate."

The same morning the Image-man set forth, and his wife followed him, aecording to custom, at a distance. The way was rough and intricate, and she could not keep up with his rapid pace; but she struggled hard, and perseveringly to overtake him. Moowis had been long out of sight, when the aun arose, and commenced upon his snow-formed body the work of dissolution. He began to melt away, and fall to pieces. As abe followed him, piece after piece of his clothing were found in the path-

She first found his mittens, then his moccasins, then his leggins, then his coat, and other parts of his garments. As the heat unbound them, they had all retorned also to their debased and filthy condition. The way led over rocks, through wind falls, across marghes. It whirled about to all points of the compass, and had no cerlain direction or object. Rags, bones, leather, beads, feathers, and soiled ribbons, were found, but she never caught the sight of Moowis. She spent the day in wandering; and when evening came, she was no nearer the object of her search than in the morning, but the snow having now melted, she had completely los his track, and wandered about, uncertsin which way to go, and in a state of perfect despair. Finding herself lor, she begun, with biner cries, to bewail her fate.
"Moowis, Moowis," she cried. "Nin ge won e win ig, ne won e win ig" -hat is-Moowis, Moowis, you have led me astray-you are leading me astray. And with this cry she continued to wander in the woods.
Sometimes the village girls repeat the above words, varying the expressions, till they consitute an irregular kind of song, which, according to the versious of a friendly haod, may be set down as follows :-

## Moowis! Moowis!

Forest rover,———
Where art thou?
Ab my bravest, gayest lover,
Guide me now.

## Moowis! Moowis!

Ah believe me,
List my moan,
Do not-do not, brave heart, leave me
All alone.

## Moowis! Moowis!

Foot-prints vanished,
Whither wend I,
Fated, lost, detested, banished, :
Must I die.

## Moowis! Moowis!

Whither goest,
Eye-bright lover, Ah thou ravenous bird that knowest,
I see you hover.
Circling-circling,
As I wander,
But to spy
Where I fall, and then to batten,
On my brease

```
ADDRESSED TO THE LATE WILLIAM L. STONE, EDITOR OF THE NEW YORE
``` COMMERCIAL ADVERTISER.

\section*{I.}

Whecling (Va.), August 19th, 1843.
I have just accomplished the passage of the Alleghany mountains, in the direction from Baltimore to this place, and must say, that aside from the necessary fatigue of night riding, the pass from the Cumberland mountains and Laurel Hill is one of the easiest and most free from danger of any known to me in this vast range. An excellent railroad now extends from Baltimore, by Frederick and Harper's Ferry, up the Potomac valley and its north branch quite to Cumberland, which is seated just under the mountains, whose peaks would seem to bar all farther approach. The national road finds its way, however, through a gorge, and winds about where " Alps on Alps arise," till the whole vast and broad-backed elevation is passed, and we descend west, over a smooth, well constructed macadamized road, with a velocity wbich is some compensation for the toil of winding our way up. Uniontown is the first principal place west. The Monongahela is crossed at Brownsville, some forty miles above Pittsburgh, whence the road, which is everywhere well made and secured with fine stone bridges, culverts and viaducts, winds around a succession of most enchanting hills, till it enters a valley, winds up a few more hills, and brings the travellers out, on the banks of the Ohio, at this town.

The entire distance from the head of the Chesapeake to the witert of the Ohio is not essentially different from three handred miles. We were less than two days in passing it, twenty-six hours of which, part night and part day, were spent in post-coaches between Curoberland and this place. Harper's Ferry is an impressive acene, but less so than it would be to a tourist wbo had not bis fancy excited by injudicions descriptions. To me, the romance was quite taken away by driving into it with a tremendous clattering power of sleam. The geological structure of this section of country, from water to water, is not without an impressive leason. In rising from the Chesapeake waters the atratified rocks are lifted up, pointing west, or towards the Alleghanies, and after crossing the summit they point east, or directly contrary, like the two sides of the roof of a house, and leave the inevitable conclusion that the Alleghanies have been lifted up by a lateral reat, as it were, at the relative point of the ridge pole. It is in this way that the granites and their congeners have been raised up into their present elevationa.
I did not see any evidence of that wave-like or undulatory structure, which was brought forward as a theory last year, in an ahle paper forwarded by Professor Rogers, and read at the meeting of the British Association for the Advancement of Science at Manchester. No organic reroains are, of course, visible, in this particular section, at least until we strike the coal and iron-stone formation of Pittsburgh. But I have been renewedly impressed with the opinion, so very opposite to the present geological theory, that less than seven thousand years is suffcient, on scientific principles, to account for all the phenomena of fosail plants, shells, bones and organic remains, as well as the displacemeate, disruptions, subsidences and rising of strata, and other evidencer of extensive physical changes and disturbances on the eartb's sarface.' And I hope to live to see some American geologist build up a theory on juw philosophical and scientific principles, which shall bear the teat of trath.

But you will, perhaps, be ready to think that I have felt more interet in the impressions of plants in stone, than is to be found in the field of waving corn before the eye. I have, however, by no meam neglected the latter; and can assure you that the crops of corn, wheat and other grains, throughoat Maryland, Pennsylvania and Western Virgirfy, ine excellent. Even the highest valleys in the Alleghanies are © © with crope of corn, or fields of stacked wheat and other grainis rally, the soil weat of the mountains is more fertile. The int If at the great western limestones, as one of ite original materials, and of the oxide of iron, is clearly denoted in heavier and more thrity comfielda along the Monongahela and Ohio valleys.

Of the Ohio River itself, one who had seen it in its full flow, in April and May, would hardly recognize it now. Shrunk in a volume far below its noble hanks, with long spits of sand and gravel ruaning almont
across it, and level sandy margins, onee covered by water, where enmies might now manceuvre, it is but the skeleton of itself. Sleamboats of a hundred tons burden now acarcely creep along its channel, which would form cockbonti for the floating palaces to be seen here in the days of its vernal and antumnal glory.

Truly yours,

\author{
HENRY R. COLCRAPT. \\ \(\delta\)
}

\section*{II.}

Ghave Cerex Flats (Va.), August 23, 1943.
I have devoted several days to the examination of the antiquities of this place and its vicinity, and find them to be of even more interest than was anticipated. The most prominent object of curiosity is tha great tumulus, of which noticen have appeared in western papers ; but this heary structure of earth is not isolated. It is but one of a serie of mounds and other evidences of ancient occupation at this point, of more than ordinary interest. I have visited and examined seven mounda, situated within a short distance of each other. They occupy the summit level of a rich alluvial plain, stretching on the left or Virginia bank of the Ohio, between the junctions of Big and Little Grave Creeke with that stream. They appear to have heen connecled by low earthen entrenchments, of which plain traces are sill visible on some perts of the commons. They included a well, stoned up in the usual manner, which is now filled with rubbish.

The summit of this plain is probably seveaty-five feet above the present summer level of the Ohio. It constitutes the second bench, or rise of land, above the water. It is on this summit, and on one of the most elevated parts of it, that the great tumulus stands. It \(j\) is in the ohape of a broad cone, cut off at the apex, where it is some fifty feet across. This area is quite level, and commands a view of the entire plain, and of the river above and below, and the weat shores of the Obio in front. Any public transaction on this area would be visible to multitudes around it, and it has, in this respect, all the adventages of the Mexican and Yucatanese teocalli. The circumference of the base hap been atated at a little under nine hundred feet; the beight is sixty-nine feet.

The most interesting object of entiquarian inquiry is a small flat stone, inscribed with antique alphabetic characters, which was disclosed on the opening of the large mound. These characters are in the ancient rock alphabet of sixteen right and acute angled single stokes, uned by the Pelaggi and other early Meditcrramean nations, and which is the perent
of the modera Runic as well as the Bardic. It is now some four or five years since the completion of the excavations, so far as they have been made, and the discovery of this relic. Several copies of it soon got abroad, which differed from each other, and, it was supposed, from the original. This conjecture is true; neither the print poblished in the Cincinnati Gazette, in 1839, nor that in the American Pioneer, in 1843, is correct. I have terminated this uncertainty by taking copies by a scientific process, which does not leave the lines and figures to the uncertainty of man's pencil.

The exiatence of this ancient art here could hardly be admitted, otherwise than as \({ }^{\text {an }} \mathrm{n}\) insulated fact, without some corroborative evidence, in habits and customs, which it would be reasonable to look for in the existiog ruins of ancient occupancy. It is thought some such testimony has been found. I rode out yesterday three miles back to the range of higb hills which encompass this sub-valley, to see a rude tower of atove atanding on an elevated point, called Parr's point, which commands a view of the whole plain, and which appears to bave been constructed as a watch-tower, or look-out, from which to descry an approaching enemy. It is much dilapidated. About six or seven feet of the worik is still entire. It is circular, and composed of rough stones, laid without mortar, or the mark of a hammer. A heary mass of fallen wall lies around, covering an area of some forty feet in diameter. Two similar points of observation, occupied by dilapidated towers, are represented to exist, one at the prominent summit of the Ohio and Grave Creek hills, end another on the promontory on the opposite side of the Ohio, in Belmont county, Ohio.

It is known to all acquainted with the warlike habits of our lndians, that they never have evinced the foresight to post a regular seniry, and these rade towers may be regarded as of cotemporaneous age with the interment of the inscription.

Several polished tubes of stone have been found, in ove of the lesser mounds, the use of which is not very apparent. One of these, now on my table, is 12 inches long, \(1 \frac{1}{2}\) wide at one end, and \(1 \frac{1}{2}\) at the other. It is made of a fine, compact, lead blue steatite, motijed, and has been constructed hy boring, in the manuer of a gan harrel. This boring is continued to within ahout threeeighths of an inch of the larger end, through which but a small aperture is left. If this small aperture be looked through, objects at a distance are more clearly seen. Whether it had this telescopic usc, or others, the degree of art evinced in its construction ia far from rude. By inserting a wooden rad and valve, this tube woald be converted into a powerful syphon, or syringe.

I bave not space to notice one or two additional traits, which serve to awaken new interest at this ancient point of aboriginal and apparently aixed setulement, and must omit them till my pext.
III.

\section*{Grave Caeef Flats, August 24, 1843.}

The great mound at these flats was opened as a place of public resort about four yeara ago. For this purpose a horizontal gallery to its centre was dug and bricked up, and provided with a door. The centre was walled round as a rotunda, of sbout twenty-five feet diameter, and a shaft sunk from the top to intersect it ; it was in these two excavalions that the skeletons and accompanying relics and ornaments were found. All these articles are arranged for exhibition in this rotunda, which is lighted up with candles. The lowermost skeleton is almost entire, and in a good state of preservation, and is put up by means of wires, on the walls. It has been overstretched in the process so as to measure sin feet; it should be about five feet eight inches. It exhihits a noble frame of the buman species, bearing a skull with craniological developments of a highly favorahle charcter. The face bones are elongated, with a Iong chin and symmetrical \(j B w\), in which a full and fina set of teeth, above and below, are present. The skeletons in the upper yault, where the inscription stone was found, are nearly all destroyed.

It is a damp and gloomy repository, and exbibits in the roof and walls of the rotunda one of the most extroordinary sepulchral displays which the world affords. On casting the eye up to the ceiling, and the heads of the pillars supporting it, it is found to be encrusted, or rather festonned, with a white, sofi, flaky mass of matter, which had exuded from the mound above. This apparently animal exudation is as white as mow. It hangs in pendent masses and globular drops; the surface is covered with large globules of clear water, which in the reflected light have all the brilliancy of diamonds. These drops of water trickle to the floor, and occasionally the exuded white matler falls. The mooden pillars are furnished with the appearance of capitals, hy this substance. That it is the result of a soil highly charged with particles of matter, arising from the decay or incineration of buman bodies, is the only theory hy which we may account for the phenomenon. Curious and unique it certainly is, and with the faint light of a few candles it would not require much imagiastion to invest the entire cotunds with sylphlike fortus of the sheeted deed.

An old Cherokee chief, who visited this scene, recently, with his companions, on his way to the West, was so excited and indignant at the desecration of the tumulus, hy this display of bones and relics to the gaze of the white race, that be betame furious and unmanageable; his friends and interpreters had to force him out, to prevent his assassinating the guide; and soon after he drowned bis senses in alcohol.

That this spot was a very ancient point of settlement by the hunter
race in the Ohio valley, and that it was inhabited hy the present red nace of North American Indians, on the arrival of whites west of the Alleghanies, are both admitted facts ; nor would the historian and antiquary ever have busied themselves farther in the matter had not the inscribed stone come to light, in the year 1839. I wes informed, yeaterday, that another inscription stone had been found in ons of the amaller mounds on these flats, ahout five years ago, and have ohtained dala sufficient as to its present location to put the Etbnological Society on its trace. If, indeed, these inscriptions shall lead us to admit that the coatinent was visited by Europeans prior to the era of Colurubus, it is a question of very high antiquarian interest to determine who the visitors were, and what they have actually left on record in these antique tahlets.

I have only time to add a single additional fact. Among the articles foond in this claster of mounds, the greater part are commonplace, in our westerb mounds and town ruing. I have noticed hut one which bears the character of that unique type of architecture found by Mr. Stephens and Mr. Catherwood in Central America and Yucatan. With the valuable monumental standards of comparison furnisbed by these gentlemen before me, it is impossible not to recognize, in an ornamental stone, found in one of the lesser mounds here, a specimen of similar workmanship. It is in the style of the heavy feather-sculptored ormements of Yucetan-the material being a wax yellow asud-stone, dartened by time. I have taken such notes and drawings of the ohjects above referred to, as will enable me, I trust, in due time, to give a comnected account of them to our incipient society.

\section*{IV.}

Massllion, Ohio, August 27th, 1843.
Since my last letter I have traversed the State of Ohio, hy stage, to this place. In coming up the Virginia banks of the Ohio from Moundsville, I passed a monument, of simple construction, erected to the memory of a Captain Furman and twenty-one men, who were killed by the Iodians, in 1777, at that spot. They had been out, from the fort at Wheeling, on a scouting party, and were waylaid at a pass called the narrows. The Indians had dropped a pipe and some trinkets in the path, knowing that the white men woald pick them up, and look at them, and while the letter were grouped together in this act, they fired and killed every man. The Indians certainly fought hard for the posmession of this valley, aiming, at all times, to make up hy stratagem what they lacked in nambers. I doubt whether there is in the history of the
apread of civilisation over the world a theatre so rife with partian adventure, massacre and marder, as the valley of the Ohio and the country west of the Alleghany gederally presented between the breaking out of the American revolution, in 76, and the close of the Black Hawk war in 1832. The true era, in fact, begins with the French war, in 1744, and terminates with the Florida war, the present year. \(\boldsymbol{A}\) work on this subject, draws from authentic sources, and written with spirit and talent, would be read with avidity and poasess a permanent intereal.

The face of the country, from the Ohio opposite Wheeling to the waters of the Tuscarewas, the north fork of the Muakingum, is a serien of high rolling ridges and knolls, \(u_{p}\) and dow which the stage travela slowly. Yet this section is fertile and well cultivated in wheat and corn, particularly the latter, which looks well. Tbis land cannot be parchased under forty or fifty dollars an acre. Much of it was originally bought for seventy-five cents per acre. It was over this higb, wavy land; that the old Moravian missionary road to Gnadenhutten ran, and I pursued it to within six miles of the latter place. You will recollect this locality as the scene of the infamous murder, hy Williamson and his party, of the non-resisting Cbristian Delawares under the ministry of Heckewelder and Ziesberger.
On the Stillwater, a branch of the Tuscarawas, we first come to level lands. This stream was noted, in early days, for its beaver and other furs. The last beaver seen here was shot on its banks twelve years ago. It had three legs, one having probably been caught in a trap or been bitten off. It is known that not only the heaver, but the otter, wolf and fox, will bite offa foot, to escape the iron jaws of a trap. It has been said, but I know not on what good authority, that the hate will do the same.

We first struck the Ohio canal at Dover. It is in every reapect a well constructed work, with subatantial locks, culverts and viaducts. It is fifty feet wide at the top, and is more than adequate for all prement parposes. It pursues the valley of the Tuscarawas up to the sommit, by which it is connected with the Cuyahuga, whose outlet is at Cleveland. Towns and villages have sprung up along its banks, where before there was a wilderness. Nothing among them impreased me more than the town of Zoar, which is exclusively settled by Germans. There seems something of the principles of association-one of the fallecies of the age-in its large and single town store, hotel, \& , hut I do not know how far they may extend. Individual property is beld. The evidences of thrift and skill, in cultivation and mechanical aod mill work, are most striking. Every dwelling bere is surrounded with fruit and fruit trees. Tbe botanical garden and hot-house are on a large scale, and exhibit a fayorable specimen of the present atate of borticulture.

One of the assistants very kindly plocked for me some fine frait, and volontarily offered it. Zoar is quite a place of resort as a ride for the neighboring towns. I mey remark, en passant, that there is a lage proportion of German population throughout Ohio. They are orderly, thrify and industrious, and fall readily into our political syalem and habits. Numbers of them are well educated in the German. They embrace Lutherans as well as Roman Catholies, the Latter predominating.

Among the towns which have recently sprong up on the line of the canal, not the least is the one from which I date this letter. The name of the noted French divine (Messillon) was affixed to an uncultivated spot, by some Boston gentlemen, some twelve or fourteen years ago. It is now one of the most thriving, city-looking, basiness places in the interior of Obio. In the style of its stores, mills and architecture, it reminds the visitor of that extreordinary growth and apirit which marked the early years of the building of Rochester. It numbers churches for Episcopalians, Baptists, Methodists and Preabyterians, and also Latherans and Romenists. About three hundred barrels of flour can be turned out per diem, by its mills. It is in the greatest wheat-growing county in Chio (Stark), hut is not the county-seat, which is at Canlon.

\section*{v.}

Detroit, Sept. 15th, 1843.
Is pasaing from the interior of Ohio toward Lake Erie, the face of the country exhibits, in the increased size and nomber of its boulder stones, evidences of the approach of the traveller toward those localities of sienites and other crystalline rocks, from which these erratic blocks and weter-worn masses appear to have been, in a remote age of our plapet, removed. The soil in this section has a freer mixture of the broken down slates, of which portions are stillinin place on the shores of Lake Erie. The result is a clayey soil, less favorable to wheat and Indian com. We came down the cultivated valley of the Cuyaboga, and reached the banks of the lake at the fine town of Cleveland, which is clevated a hundred feet, or more, above it, and commands a very extensive view of the lake, the harbor and its ever-busy shipping. A day was employed, by stage, in this section of my tour, and the next carricd me, by steamboat, to this ancient French capita!. Detroit has many interesting historical associations, and appears destined, when its railroad is finished, to be the chief thoroughfare for travellers to Chicago and the Miseissippi velley. As my attention has, however, been more takea
up, on my way, with the past than the present and future condition of the West, the chief interest which the route has excited must necessarily arise from the same source.

Michigan convects itself in its antiquarian featores with that character of pseudo-civilisation, or modified barbarianism, of whicb the works and mounds and circumvalations at Grave Creek Flass, at Mariette, at Circleville and other well known points, are evidences. That this improved condition of the hunter state had an ancient but partial connection with the early civilisation of Europe, appears now to be a fair inference, from the inscribed stode of Grave Creek, and other traces of European arts, discovered of late. It is also evident that the central American type of the civilisation, or rather advance to civiligation, of the red race, reached this length, und fually went dowu, with its gross idolatry ard horrid rites, and was merged in the better known and still existiog form of the hunter state which was found, respectively, by Cabot, Cartier, Verrezani, Hudson, and others, who first dropped anchor on our coasts.

There is strong evidence fumished by a survey of the western country that the teocalli type of the Indian civilisation, so to call it, devedoped itself from the banks of the Ohio, in Tennessee and Virginia, west and norlb-westwardly across the sources of the Wabash, the Muskingum and other streams, toward Lake Michigan and the borders of Wisconsin territory. The chief evidences of it, in Michigan and Indiana, consist of a remarkable series of curious garden beds, or accurately furrowed fields, the perfect outlines of which have been preserved by the grass of the oak openings and prairies, and even among the heaviest forests. These remains of an ancient cultivation have attracted much attention from observing sctulers on the Elkhart, the St. Joseph's, the Kalamazoo and Grand river of Michigan I possess some drawings of these anomalous remains of by-gone industry is the hunter race, taken in former years, which are quite remarkable. It is worthy of remerk, too, that no large tumuli, or teocalli, exist in this particular prortion of the West, the ancient population of which may therefore be supposed to bave been borderers, or frontier bands, who resorted to the Ohio valley os their capital, or place of annual visitation. All the mounds scattered tbrough Northern Ohio, Indiana and Michigan, are mere barrows, or repositories of the dead, and would seem to have been erected posterior to the fall or decay of the gross idel worship and the offer of buman sacrifice. I have, within a day or two, received a singular implement or ornament of stone, of a crescent shape, from Oukland, in this State, which connects the scattered and out-lying remains of the smaller mounds, and traces of ancient agricultural labor, with the antiquities of Gravo Creek Flats
VI.

Detroit, Sept. 16th, 1843.
The antiquities of Weatern America are to be judged of by isolated and disjointed discoveries, which are often made at widely distant points and spread over a very extensive area. The labor of comparison and discrimination of the several eras which the objects of these discoreries establish, is increased by this diffusion and disconnection of the times and places of their occurrence, and is, more than all, perhaps, bindered and put back by the eventual carelessness of the discoverers, and the final loss or mutilation of the articies disclosed. To remedy this evil, every discovery made, however apparently unimportant, should in this ers of the diurnal and periodical press be put on record, and the objects themselves be either carefully kept, or given to some public scientific inslitution.

An Indian chief called the Black Eagle, of river Au Sables (Michigan), discovered a curious antique pipe of Etruscan ware, a few years ago, at Thunder Bay. This pipe, which is now in my possession, is as remarkable for its form as for the character of the earthenware from which it is made, differing as it does so entirely from the coarse earthen pols and vesaels, the remains of which are scattcred so generally throughout North America. The form is semi-circular or horn-shaped, with a quadrangular bowl, aod having impressed in the ware ornamenta at each angle. I heve never before, indeed, seen any pipes of Indian manufacture of baked clay, or earthenware, such articles being generally carved out of ateatite, indurated clays, or other soft mineral substances. It is a peculiarity of this pipe that it was smoked from the amall end, which is rounded for the purpose of putting it between the lips, without the intervention of a stem.

The discoverer told me that he had laked it from a very antique grave. A large hemlock tree, he said, had been blown down on the benks of the river, tearing up, by is roots, a large mass of eartb. At the bottom of the excavation thus made he discovered a grave, which contained a vase, ont of which he took the pipe with some other articles. The vase, he said, was broken, so that he did not deem it worth bringing away. The other articles he deseribed as bones.

Some time since I accompanied the chief Kewalkonce, to get an anciemt clay pot, such as the Indians used when the Europeans artived on the continent. He asid that he had discovered two auch pots, in an entire atate, in a cave, or crevice, on one of the rocky islets extending north of Point Tessalon, which is the northern cape of the entrance of the Straits of St. Mary's into Lake Huron. From this locality he had removed one of them, and concealed it at a distant point. We travelled
in canoes. We landed on the northern shore of the large island of St. Joseph, which occupies the jaws of those expanded straits. He led me up an elevated ridge, covered with forest, and alonghe winding narrow path, conducting to some old Indian cornfields. All 4 once he stopped in this path. "We are now very near it," he said, and stood still, looking toward the spot where he had concealed it, beneath a decayed trunk. He did not, at last, appear to be willing to risk his luck in life-such is Indian superstition-by being the actual discoverer of this object of veneration to a white man, but allowed me to make, or rather complete, the re-discovery.

With the exception of being cracked, his vessel is entire. It corresponds, in material and character, with the fragments of pottery usually found. It is a coarse ware, tempered with quartz or feld-spar, and such as would admit a sudden fire to be built around it. It is some ten inches in diameter, tulip-shaped, with a bending lip, and without supports beneath. It was evidently used as retorts in a sand bath; there being no contrivance for suspending it. I have forwarded this curious relic entire to the city for examination. I asked the chief who presented it to me, and who is a man of good sense, well acquainted with Indian traditions, how long it was since such vessels had been used by his ancestors. He replied, that he was the seventh generation, in a direct line, since the French had first arrrived in the lakes.

\section*{VII.}

Detrort, Sept. 16th, 1843.
There was found, in an island at the west extremity of Lake Huron, an ancient repository of human bones, which appeared to have been gathered from their first or ordinary place of sepulture, and placed in this rude mausoleum. The island is called Isle Ronde by the French, and is of small dimensions, although it has a rocky basis and affords sugar maple and other trees of the hard wood species. This repository was first disclosed by the action of the lake against a diluvial shore, in which the bones were buried. At the time of my visit, vertebre, tibia, portions of crania and other bones were scattered down the fallen bank, and served to denote the place of their interment, which was on the margin of the plain. Some persons supposed that the leg and thigh bones denoted an unusual length; but by placing them hip by hip with the living specimen, this opinion was not sustained.

All these bones had been placed longitudinally. They were arranged in order, in a wide grave, or trench. Contrary to the usual practice of the present tribes of red men, the skoletons were laid north and south. I asked
several of the most aged Indian chiefs in that vicinity for information respecting these, bones-by what tribe they had been deposited, and why they had beenjil orth and south, and not east and west, as they uniformly bury \({ }^{\prime} \mathrm{By}\) they had no infin tion to offer. Chusco, an old Ottawa prophet, since dead, remarle that they were probably of the time of the Indian bones found in the caves on the island of Michilimackinac.
In a small plain on the same island, near the above repository, is a long 4. aned Indian burial-ground, in which the interments are made in the ordinary way. This, I understood from the Indians, is of the era of the occupation of Old Mackinac, or Peekwutinong, as they continue to call it-a place which has been abandoned by both whites and Indians, soldiers and missionaries, about seventy years. I caused excavations to be made in these graves, and found their statements to be generally verified by the character of the articles deposited with the skeletons; at least they were all of a date posterior to the discovery of this part of the country by the 5 rench. There were found the oxydated remains of the brass mountings of a chief's fusil, corroded fire steels and other steel implements 7ermillion, wampum, and other cherished or valued articies. I sent a fect skull, taken from one of these graves, to Dr. Morton, the authoi . NGrania," while he was preparing that work. No Indians have cestaci on this island within the memory of any white man or Indian,with whom I have conversed. An aged chief whom I interrogated, called Saganosh, who has now been dead some five or six years, told me that he was a small boy when the present settlement on the island of Michilimackinac was commenced, and the English first took post there, and began to remove their cattle, \&c., from the old fort on the peninsula, and it was about that time that the Indian village of Minnisains, or Isle Ronde, was abandoned. It had before formed a link, as it were, in the traverse of this part of the lake (Huron) in canoes to old Mackinac.

The Indians opposed the transfer of the post to the island of Michilimackinac, and threatened the troops who were yet in the field. They had no cannon, but the commanding officer sent a vessel to Detroit for one. This vessel had a quick trip, down and up, and brought up a gun, which was fired the evening she came into the harbor. This produced an impression. I have made some inquiries to fix the date of this transfer of posts, and think it was at or about the opening of the era of the American revolution, at which period the British garrison did not feel itself safe in a mere, stockade of timber on the main shore. This stockade, dignified with the name of a fort, had not been burned on the taking of it, by surprise, and the massacre of the English troops by the Indians, during Pontiac's. war. This massacre, it will be recollected, was in 1763 -twelve years before the opening of the American war.
4

\section*{VIII.}

Detrotr, Oct. 13th, 1843.
The so-called copper rock of Lake Superior was bronght to this place, a day or two since, in a vessel from Sault Ste-Marie, having been transported from its original locality, on the Ontonagon river, at no small labor and expense. It is upwards of twenty-tbree years since I firat risited this recnarkable specimen of native copper, in the foresta of Lake Superior. It has been somewhat diminished in size and weight, in the meantime, by visitors and travellers in that remote quarter; but retains, very well, its original character and general features.

I have just returned from a re-examination of it in a store, in one of the main streets of this city, where it has been deposited by the present proprietor, who designs to exhibit it to the curious. Its greatest length is four feet six inches ; its greatest width about four feet ; its maximum thickness eighteen inches. These are rough measurements with the rule. It is almost entirely composed of malleable copper, and bears striking marks of the visits formerly paid to it, in the evidences of portions which have from time to time been cut off. There are no scales in the city large enough, or other means of ascertaining its precise weight, and of thus tertrinating the uncertanty arising from the several estimates heretofore made. It has been generally estimated here, since its antival, to weigh between six and seven thousand pounds, or ahout three and a half tons, and is by far the largest known and described specimen of native copper on the globe. Rumors of a larger piece in South America are apocryphal.

The acquisition, to the curious and scientific world, of this extraordimary mass of native metal is at least one of the practical results of the copper-mining manis which carried so many adventurers northward, into the region of Lake Superior, the past summer (1843). The person who has secured this treasure (Mr. J. Eldred) hes been absent, on the business, since early in June. He succeeded in removing it from its diluvial bed on the hanks of the river, by a car and sectional railruad of two links, formed of timber. The motive power was a tackle attached to lrees, which was worked by men, from fourteen to twenty of whom were employed upon it. These rails were alternately moved forward, as the car passed from the hindmost.

In this manner the rock was dragged four miles and a half, across a rough country, to a curve of the river below its falls, and below the junction of its forks, where it wes received by a boat, and conveyed to the mouth of the river, on the lake shore. At this point it was put on board a schooner, and taken to the falls, or Sault Ste-Marie, and thence, haviag been transported acrosa the portage, embarked for Detroit. The
entire distance to this place is a little within one thousand miles; threo hundred and twenty of which lie beyond St. Mary's.

What is to be ita future history and disposition remains to be seen. It will probably find ite way to the museum of the National Instinte in the new patent office at Washington. This would be appropriate, and it is stated that the authorities have asserted their ultimate claim to it, probebly under the 3d article of the treaty of Fond du Lac, of the 5th of August, 1826.

I have no books at hand to refer to the precise lime, no far as known, when this noted mass of copper firat became known to European. Probably a hundred and eighty years have elapsed. Marquette, and his devoted companion, passed up the abores of Lake Superior about 1668, which was several years before the discovery of the Mississippi, by that eminent missionary, by the way of the Wisconsin. From the letters of D'Ablon at Sault Ste-Marie, it appears to have been known prior to the arrival of La Salle. These allusions will be sufficient to show that the rock has a historical notoriety. Apart from this, it is a specimen which is, both mineralogically and geologically, well worthy of national preeervation.
It is clearly a boulder, and bears marks of altrition from the action of water, on some parts of its rocky surface as well as the metallic portions. A minute mineralogical examination and description of it are required. The adhering rock, of which there is less now than in 1820, is apparently serpentine, in some parts steatitic, whereas the copper ores of Keweena Point on that lake, are found exclusively in the amygdaloids and greenstones of the trap formation. A circular depression of opaque crystaline quartz, in the form of a scmi-geode, exists in one face of it; other parts of the mass disclose the same mineral. Probably 300 lbs . of the metal have been hacked off, or detached by steel chisels, aince it hem been known to the whites, most of this within late years.

\section*{1x.}

Detrort, Oct. 16th, 1843.
In the rapid development of the resources and wealth of the Weat, there is no object connected with the navigation of the upper lakes of more prospective importance than the improvement of the delle, or fats of the St. Clair. It is bere that the only practical impediment occurs to the passage of heary shipping, between Buffalo and Chicago. This delta is formed by deposits at the point of discharge of the river St Clair, into Lake St. Clair, and occurs at the estimated distance of about thisty-
six miles above the city. The flats are fan-shaped, and spread, I am inclined to think, upward of fifteen miles, on the line of their greatest expansion.

There are three principal channels, besides sub-channels, which carry a depth of from four to six fathoms to the very point of their exit into the lake, where there is a bar in each. This bar, as is shown by the chart of a survey made by olficers Macomb and Warner, of the topographical eagineers, in 1842, is very similar to the bars at the mouths of the upper lake rivers, and appears to be susceptible of removal, or improvement, by similar means. The north channel carries nine feet of water over this bar, the present season, and did the same in 1842, and is the one exclusively used by vessels and steamboats. To the latter this tortuous chaonel, which is above ten miles farther round than the middle channel, presents no impediment, hesides the intricacies of the bar, bat increased distance.
It is otherwise, and ever must remain so, to vessels propelled by sails. Such vessels, coming up with a fair wind, find the bend so acute and involved at Point aur Chenes, at the bead of this channel, as to bring the wind directly ahead. They are, consequently, compelled to cast anchor, and await a change of wind to turn this point. A delay of eight or ten days in the upward peassage, is not uncommon at this place. Could the bar of the middle channel, which is direct, be improved, the saving in both time and distance above indicated would be made. This is an object of public importance, interesting to all the lake States and Territories, and would constitute a subject of useful consideration for Congress. Every year is adding to the number and size of our lake vessels. The rate of increase which doubles our population in a given number of years must also increase the lake tonnage, and add new motives for the improvement of its aavigation.
Beaides the St. Clair delta, I know of no other impediment in the chanoel itseh, throughout the great line of straits between Buflalo and Chicago, whicb prudence and good seamanship, and well found vessels, may not ordinarily surmount. The rapids at Black Rock, once so formidable, have long been obriated by the canal dam. The straits of Detroit have been well surveyed, and afford a deep, agvigable channel at all times. The rapids at the head of the river St. Clair, at Port Huron, have a sufficiency of water for vessels of the largest class, and only require a fair wind for their ascent.

The strails of Michilimackinac are believed to be on the same water level as Lakes Huron and Michigan, and only present the phenomenon of a current setting east or west, in compliance with certain laws of the reaction of water driven by winds. Such are the slight inpediments on this extraordinary line of inland lake navigation, which is carried on at an average aitilude of something lens than 600 feet above the tide level
of the Atlanlic. When this line of commerce requires to be diverted north, through the straits of St. Mary's into Lake Superior, a period rapidly approaching, a short canal of three-fourths of a mile will be required at the Sault Ste-Marie, and some excavation msde, 80 as to permit vermels of heavy tonnage to cross the bar in Lake George of thoee strait.

\section*{X.}

Dundas, Cazada West, Oct. 26th, 1843.
Fortonately for the study of American antiquities the aborigines have, from the earliest period, practised the interment of their arma, utensils and ornaments, with the dead, thus furnishing evidence of the particular state of their skill in the arts, at the respective eras of their history. To a people withont letters there could scarcely have been a better index than such domestic monuments furnish, to determine these eras; and it is hence that the examination of their mounds and brurial-places assumes so important a character in the irvestigation of history. Heretofore these inquiries have been confined to portions of the continext south and west of the great chain of lakes and the St. Lawrence; but the advancing settlements in Canada, at this time, are beginning to disclose objects of this kind, and thus enlarge the field of inquiry.

I had, yesterday, quite an interesting excursion to one of these ancient places of sepulture north of the head of Lake Ontario. The locality is in the township of Beverly, about twelve miles distant from Dundas. The rector of the parish, the Rev. Mr. McMurray, bad kindly made arrangements for my visit. We set out at a very early hour, on honseback, the air being keen, and the mad and water in the road so completely frozen as to bear our horses. We ascended the moantain and passed on to the table land, about four miles, to the house of a worthy parishioner of Mr. McM., by whom we were kindly welcomed, and afler giving us a wartn breakfast, he took us on, with a stout team, about six miles on the Guelph road. Diverging fror this, about two miles to the len, through a heavy primitive forest, with occasional clearinge, we came to the spot. It is in the 6 th concession of Beverly.

We were now aboat seventeen miles, hy the road, from the extreme head of Lake Ontario, at the town of Hamilton, Burlington Bay; and on one of the main brabches of the hright and busy mill-stream of the valley of Dundas. As this part of the country is yet encumbered with deuse and almost unhroken masses of trees, with roads unformed, we had frequently to inquire our way, and at length atopped on the skirts of an elerated beech ridge, upon which the trees atood as large and thickly an
is other parts of the forest There was nothing at firat sight to betoken that the hand of man had ever beea exercised there. Yet this wooded ridge embraced the locality we were in quest of, and the antiquity of interments and accumulations of buman bones on this beight is to be inferred, from their occurrence amidst this forest, and beneath the roots of the largest trees.

It is some five or six years since the discovery was made. It bappened from the blowing down of a large tree, whose roots laid bare a quantity of human bones. Search wras then made, and has been renewed at subsequent times, the result of which has been the disclosure of human skeletons in such abundance and massire quantities as to produce astonishment. This is the characteristic feature. Who the people were, and bow such an accumulation should have occurred, are questions which have been often asked. And the interest of the acene is by no means lessened on observing that the greater part of these bones are deposited, not in isolated and single graves as the Indians now bury, but in wide and long trenches and rude vaults, in which the skeletons are piled longitudinally upon each other. In this respect they resemble a single deposit, mentioned in a prior letter, as occurring on Iste Ronde, in Lake Huron. And they would appear, as is the case with the latter, to be re-interments of bodies, after the flesh had decayed, collected from their firat places of sepulture.

No one-not the oldest inhabitant-rememhers the residence of Indians in this location, nor does there appear to be any tradition on the subject. It is a common opinion among the setilers that there must have been a great battie fought here, which would account for the accumulation, but this idea does not appear to be sustained by an examination of the skulls, which, so far as I saw, exhikit no marks of violence. Besides, there are present the bones and crania of women and children, with implements and articles of domestic use, such as are ordinarily deposited with the dead. The supposition of pestilence, to account for the number, is suhject to less objection; yet, if admitted, there is no imagianble state of Indian population in this quarter, which could have produced such beaps. The trenches, so far as examined, extend over the entire ridge. One of the transverse deposits, I judged, could not include less thas fifteen huodred square feet. The whole of this had been once dug over, in search of curiosities, such as pipes, shells, beads, \&c., of which a large number were found. Among the evidences of interments bere since the discovery of Canada, were several brass kettles, in one of which were five infant akulls.

Could we determine accurately the time required for the growth of a beech, or a black oak, as they are found on these deposits, of sixteen, oightees and twenty inches and two feet in diameter, the date of the ubendonment or completion of the interments might be very nearly fixed.

The time of the growth of these species is, probably, mach lese, in the temperate latitades, and in fertile soils, than is commonly supposed. I am inclined to think, from a hasty survey, that the whole depasit is the result of the slow accumulation of both ordinary interment, and the periodical deposit or re-interment of exhumed bones brought from contiguous hunting camps and villages. To this, pestilence has probabiy added. The ridge is said to be the apex or highest point of the table lends, and would therefore recommend itself, as a place of general interment, to the natives. Bands, who rove from place to place, and often capriciously ahandon their hunting villages, are averse to leaving their dead in such isolated spots. The surrounding country is one which must have afforded all the spontaneous means of Indian subsistence, in great abondance. The dear and bear, once very numerous, still abound.

We passed some ancient beaver dems, and were informed that the country east and north bears similar evidenees of its former occupation by the small furred animals. The occurrence of the sugar maple adde another element of Indian subsistence. There are certain enigmatical walls of earth, in this vicinity, which extend several miles across the country, following the leading ridges of land. Accounts vary in repreenenting them to extend from five to eight miles. These I did not see, but learn that they are about six feet high, and present intervals es if for gates. There is little likelibood that these walls were constructed for purposes of military defence, remote as they are from the great watera, and aside from the great leading war-paths. It is far more probable that they were intended to intercept the passage of game, and compel the deet to pass through these artificial defiles, where the hunters lay in wait for them.

Ancient Iroquois tradition, es preserved by Colden, represents this section of Canada, extending quite to Three Rivers, as occopied by the Adirondacks; a numerous, fierce, and warlike race, who carried on a determined war against the Iroquois. The same race, who were marked as speaking a different type of languages, were, at an early day, called by the French by the general term of Algonquins. They had three chief residences on the Utawas and its sources, and retired nortbwestwardly, by that rnute, on the increase of the Iroquois power. Whoever the people were who hunted and buried their dead at Beverly, it is manifest that they occupied the district at and prior to the era of the discovery of Canada, and also continued to oecupy it, after the Freneh had introduced the fur trade into the interior. For we find, in the manufactured articles buried, the distinctive evidences of hoth periods.

The antique bóne beads, of which we raised many, in sidu, with crania and other bones, from beneath the roots of trees, are in every respect similar to those found in the Grave Creek mound, which have been improperly called "ivory." Amulets of bone and shell, and pipes of aina
steatite and indurated red clay, are also of this early period, and are snch as were generally made and used by the ancient inhabitants prior to the introduction of European wrought wampum or seawan, and of beads of porcelain and glass, and ornamented pipes of coarse pottery. I also examined several large marine ahells, much corroded and decayed, whieh had beeo brought, most probably, from the shores of the Atlantic.

Having made such excavations as limited time and a single spade woold permit, we retraced our way to Duadas, which we reached atter nightfall, a little fatigued, but well rewarded in the examination of an object rbich conoects, in several particulars, the antiquities of Canede with those of the United Stated.

\section*{THE LONE LIGHTNING.}

\author{
AT ODJIBTA TALE.
}

A inttle orphan boy who had no one to care for hin, was once living with his uncle, who treated hion very badly, making him do hard things and giving him very little to eat; so that the boy pined away, he never grew much, and became, through hard usage, very thin and light. At last the uncle felt ashaned of this treatment, and determined to make agends for it, by fattening him up, but his real object was, to kill him hy over-feeding. He told his wife to give the boy pleaty of bear's meat, and let him have the fat, which is thought to bo the hest part. They were both very assiduous in cramming him, and one day came near ehoking him to death, hy forcing the fat down his throat. The boy escaped and fled from the lodge. He knew not where to go, but wendered about. When night came on, he was afraid the wild beasts would eat him, so he elimbed up into the forks of a high pine tree, and there he fell aaleep in the hranches, and had an aupoway, or ominous dream.

A perton appeared to him from the upper aky, and said, "My poor little lad, I pity you, and the bad usage you have received from your uncle has led me to visit you : follow me, and slep in my tracks." Immediately his sleep left him, and he rose up and followed his guide, mounling ap higher and higher into the air, until be reached the upper sky. Here twelve arrows were put into his hands, and he was told that there were a great many manitoes in the northern sky, against whom he must go to war, and try to waylay and shoot them. Accordingly he went to that part of the sky, and, at long intervals, shot arrow after arrow, until he hed expended elaven, in vain attempt to bill the manitoes. At the fight of each arrow, there was a loog and solitary streak of lightning in the alry-then all wes clear again, and not a cloud or apot could be seen.

The tweifth arrow he held a long time in his hapds, cad looked aronad keenly on every side to spy the manitoes he was afier. But these manitoas were very cunning, and could change their form in a moment. All they feared was the boy's arrows, for these were magic arrows, which hed been given to him by a good spirit, and hed power to till them, if aimed aright. At length, the boy drew up his last arrow, settled in his aim, and let fly, as he thought, into the very heart of the chief of the manitoes; bat before the arrow reached him, be changed himself into a rock Into this rock, the head of the arrow sank doep and atuck fint.
"Now your gifts are all expended," cried the enraged manito, "and 1 will make an example of your audacity and pride of heart, for lining your bow against me"-and so saying, be transformed the boy into the Nazhik-a-wä wà sua, or Lone Lightning, which may be observed in the northern sky, to this day.

\section*{AK ÚK 0 JEESH, OR GROUNDHOG.}

A pranle akokojeesh, or groundhog, with a numerons family of young ones, was burrowing in her wauzh, or hole in the ground, one long winter, in the north, when the young ones became inpatient for apring. Every day the mother would go out and get roote and other things, which she brought in to thero to eat; and she always told them to lie close and keep warm, and never to venture towards the mouth of the wauzh. But they became very impatient at last to see the light and the green woods. Mother, said they, is it not almost spring? No! mo! said she, in a cross humor, keep still and wait patiently; it hails, it snows, it is cold-it is windy. Why should you wish to go oat? This she told them so often, and said it in such a bad temper, that they at last suspected some deception. One day she came in, after having been a long while absent, and fell asleep, with her mouth open. The little ones peeped in slily, and saw on her teeth the remains of the nice white holbous roots of the mo-na-wing, or adder's tongue violet. They at once lynew it was spring, and without disturbing the old one, who only wanted to keep them in till they were full grown, away they scampered, out of the bole, and dispersed themselves about the forest, and 30 the family were all scattered.

"THE LOON UPON THE LAKE."
}

\author{
BI E. F. HOFFMAN.
}
[Prom the Cbluppore-"!
I lookzd across the water, I bent o'er it and listened, 1 thought it whe my lover, My true lover's paddle glistened. Joyous thus his light canoe would the silver ripples wake.But no!-it is the Loon alone-the loon upon the lake. Ah me! it is the loon alone-the loon upon the lake.

I see the fallen maple
Where he stood, his red scarf waving,
Though waters nearly bury
Boughs they then were newly laving.
I hear his last farewell, sa it echoed from the brake.Bat no, it is the loon alone-the loon upon the lake, Ah me! it is the loon alone-the loon upon the lake.

\section*{THE CHEROKEES.}

We learo from the Cberokee Advocate, that Col. Greorge Washington and Col. Armstrong, commisaioners to adjudicate the claims of the Cherokee natiou under the treaty of \(1835-6\), have arrived at Tallequah and have entered upon their inquiries. Gen. John T. Mason was delained at Fort Gibson by indisposition. The investigation will embrace only matters that atrictly come within the terms of the treaty-a treaty whicb the Advocate characterizes as "a real Pandors's box, whence have sprung full-grown among the Cherokee people ten thousard wrongs, vexations, jealousies, heart-buroings and other evils." The editor strongly urges upon the United States Goverument, now that the ostensible object of the treaty-the removal of the Cherokeet-has been accomplished, a more "junt and liberal condact toward that mation;" and that they shall not "be tumed away when they approach to ask, not the bestowment of lurieh fivore, bat the dirpensation of mere jartice."

\section*{HISTORY.}

\section*{ERA OF THE SETTLEMENT OF DETROTT, AND THE STRAITS BETWEEN LAKES ERIE AND HURON.}

The following papers, relative to the early occupancy of these straits, were copied from the originals in the public archives in Paris, by Gen. Cress, while he exercised the functions of minister at the court of France. The first relates to an act of occupancy made on the kanks of a tributary of the Detroit river, called St. Deny's, probably the river Aux Canards. The second coincides with the period usually assigned as the origin of the post of Detroit. They are further valuable, for the notice which is incidentally taken of the leading tribes, who were then found upon these strails.

It will be recollected, in perusing these documents, that La Salle had passed these straits on his way to "the Mlinois," in 1679, that is, eight years before the act of possession at St. Deny's, and twenty-two yeans before the establishment of the post of Detroit. The upper lakes hed then, however, been extensively laid open to the enterprise of the mioaionaries, and of the adventurers in the fur trade. Marquette, accompanied by Alloez, had visited the south shore of Lake Superior in 1668, and made a map of the region, which was publisbed in the Lattres Edfiantes. This zealous and energetic man estahlished the mission of St. Igaace at Michilimackinac, sbout 1669 or 1670 , and three yeara afterwards, entered the upper Mississippi, from the Winconssa. Vincennes, on the Wabash, was eatablished in 1710 ; \({ }^{\bullet}\) St. Louis, not till \(1763 . \dagger\)

Cafada, 7th June, 1687.
A renewal of the taking passestion of the tcritory upon the Straits [Dtroit] between Lakes Erie and Haron, by Siear de la Derasthaye
Oiver Morel, Equerry, Sieur de la Duranthaye, commandant in the noway of the King of the Territory of the Otinoas, Miamis, Pottawatamien, Sioux, and other tribes under the onders of Monsiewr, the Marquin de Denonsoille, Governor Geveral of New France.
This day, the 7th of June, 16S7, in presence of the Rev'd Father Angeleran, Head of the Missions with the Ottewas \(\ddagger\) of Michilimackinac, the

\footnotetext{
- Nicollet's Report. \(\quad\) Lew's Hiatorical Dis,
\(\ddagger\) This is, manifestly, an error. The writer of this act of posseasion appeent to have miscaken the bank of the SL Maryn, one of the tribularies of tbe Miami of the Lakes, in the Miami couniry, for the Sault de Ste-Marie, at the outlet of Lake Superior. The latter position wen occupied, at the carliest dates, to which tradition raaches, by a bracb of the Alponquina, to whom the Fronch gave the name, from the falle of the river at that locality, of Ruwteur. They are betterknown, at thin day under the neme of Cbippowas and Odjibwas.
}

Mismis of Sanit Ste-Marie, the llinois, and Green Bay, and of the Sioux of Mons de la Forest, formerly commandant of Fort St. Louis on the Illinois, of Mons. de Ligle, our Lieutenant, and of Mons. de Beanveis, Lieutenant of Fort St. Joseph, on the Straits [Detroit] between Lakes Huron and Erie. We declare to all whom it may hereater concern, that we have come upon the banks of the river St. Deny's, nituated three leagues from Lake Erie, in the Straits of the said Lakes Frie and Huron, on the south of said atraits, and also at the entrance on the north side, for and in the name of the King, that we re-take possession of the said posts, established by Mons. La Salle for facilitating the royages he made or caused to be made in vessels from Niagara to Michilimackinac, in the years * " * " at each of which we have caused to be set up anew a staff, with the arms of the King, in order to make the said renewed taking possession, and ordered several cabing to be erected for the accommodation of the French and the Indians of the Shawnees
 and Miamis, who had long been the proprietors of the said territory, but who had some time beiore withdrawn from the same for their grealer advantage.

The present act passed in our presence, signed by our hands, and by Rev. Father Angelerad, of the society of Jesuits, by MM. Dela Forest, De Lisle and De Beanvais, thus in the original:

Angeleran, Jesuite.
De la Duranthaye [a Garduer].
De Beaurais, and
De le Forest.
Compared hy me with the original in my hands, Councillor Secretary of the King, and Register in Chief of the Royal Council at Quebec, spobscribed, and each page paraphe.

Collated at Quebec, thin 11th September, 1712.
[Sigoed], Byon et Vanderull
Memoir of Morsietr de la Mothe Cadillac, relative to the extabliohment of Detroit, addressed to the Minister of Marine, 14th Septeraber, 1704 ;
La Mothe Cadillac renders an account of his conduct relative to the esto-
bbishment of Detroit, by questions and ansucers. It is the Minister whe questions, and Lal Mothe who answers:
Q. Wes it not in 1699 that you proposed to me an establishment in the Straits which separale Lake Erie from Lake Huron?
A. Yes, my Lord.
Q. What were the mo les which induced you to wish to fortify a place there, and make an eatablishment?
A. I had several. The first was to make a atrong post, which shorld not be suhject to the revolutions of other peasts, by fixing there a number
of French and Bavages, in order to curb the Iroquoin, who had constantfy annoyed our colonies and hindered their prosperity.
Q. At what time did you leave Quebec to go to Detroit ?
A. On the 8th of March, 1701. I reached Montreal the 12th, When we were obliged to make a change. ** I left La Chine the 5th of June with fifly soldiers and fifty Canadians-Messrs. De Fonty, Cap trin, Daque and Chacornach, Lieutenants. I was ordered to pans hy the Grand River of the Ottawas, notwithstanding my remonstrances. I arrived at Detroit the 24th July and fortified myself there immediately; had the necessary huts made, and cleared up the grounda, preparatory to its heing sowed in the autumn.

Compare these data, from the highest sources, with the Indian tradition of the firat arrival of the French, in the upper lakes, reoarded at page 107, Oneota, No. 2.

\section*{THE CHOCTAW INDIANS.}

The Vickobirg Sentinel of the 18th ult., referring to this tribe of Indians, has the following :-" The last remant of thin once powerfu tribe are now crossing our ferry on their way to their new homes in the far West. To one who, like the writer, has been familiar to their bronse inespressive faces from infancy, it brings associations of peculiar saduen to see them bidding here a last farewell perhaps to the old hills which gave birth, and are doubless equally dear to him and them alike. The Gnt playmates of our infancy were the young Choctaw boys of the then woods of Warren county. Their language was once acarcely less familiar to us than our mother-English. We know, we think, the chanacter of the Choctaw well. We knew many of tbeir present atalwart traves in those days of early life when the Indian and white alike forget dieguise, hut in the unchecked exuberance of youthful feeling show the real character that policy and habit may afterwards so much conceal ; and we know that, under the stolid stoic look he assumes, there is boming in the Indian's nature a beart of fire and feeling, and an all-observing zeerneas of apprehension, that marks and remembers everything that occarn, and every insult he receives. Cundi-at a hah! They are gring amay ! With a visible reluctance which nothing has overcome but the dert necessity they feel impeling them, they have looked their lagt on the graves of their sirea-the scenes of their youth-and have talen op their clow toilsome march, with their household cods among them, to thair new howe in a strange land. . They leave mames to many of oar rivere, cowns and counties; and so long as our State remains, the Choctewn, tho once owned mont of her soil, will be remembered"

\title{
a SYNOPSLS OF CARTIER'S VOYAGES OF DISCOVERY TO * NORTH AMERICA.
}

\section*{THIRD COTAGE.}

The reports and discoveries of Cartier were so well reoeived by the King of France (Francis I.), that he determined to colonize the newly diacovered country, and named John Francis de la Roche, Lord of Roberval, his "Lieutenant and Govertor in the countries of Canada and Hochelaga." Cartier retained his former situation as "Captain General and leader of the ships," and to him was eatrusted the further prosecution of discoveries. Five vessels were ordered to be prepared at St. Malo, and measures appear to have been taken to carry ont settlers, catte, seeds, and agricultural implements. Mach delay, however, seens to have attended the preparations, and before they were completed, Donascona and his companiona, who had been baptized, paid the debt of nature. A little girl, ten years old, was the only person sarviving out of the whole number of captives.
It is seldore that a perfect harmony has prepailed between the leaders of naval and land forces, in the execution of great enterprises. And thougb but little is said to guide the reader in forming a satisfactory opinion on the subject, the result in this instance proved that there was a setlled dissalisfaction in the mind of Cartier respecting the geperal arrangements for the contemplated voyage. Whether he thought himseit meglected in not being invested with the government of the country be had discovered, or felt onwilling that another should share in the honort of futare discoveries, cannot now be determined. It should be recollected that the conquest of Mexico had then but recently heen accomplished (1520), and it is not improbable that Cartier, who had taken some pains \(\omega\) exalt Donnacona into another Montezuma, thought himeelf entitled to receive from Francis, rewarde and emolumenta in some measure corresponding to those which his greal rival, Charles, had finally beatowed apon Cortez.

Whatever were the causes, four years elapsed before the ships were prepared, and M. La Roche, on visiting the vessels in the road of St. Malo, ready for sea, then informed Cartier that his artillery, munitions, and "other necesary things" which he had prepared, were not yet arrived from Champaigoe and Nommandy. Cartier, in the meantime, had received positive orders from the King to set sail. In this exigency, it wis determined that Cartier should proceed, while the King's Lieutenant ahould remain "to prepare a ship or two at Honfleur, whither be thought his things were come."

This arrangement concloded, Le Roche inrested Curtier with fall
powers to act until his arrival, and the latler set seil with five shipm, "well furnished and vietualled for two years," on the 23d of May, 1540. Storms and contrary winds attended the passage. The ships parted corrpany, and were kept so long at sea, that they were compelled to water the cattle, \&c., they took out for breed, with cider. At length, the vesmels, re-assembled in the barbor of Carpunt in Newfoundland, and after taking in wood and water, proceeded on the voyage, Carties not deeming it advisable to wait longer for the coming of La Rocbe. He reached the little haven of Saincte Croix (where he wintered in the former voyage), on the 23d of August. His arrival was welconred by the natives, who crowded around his vessels, with Agona at their bead, making inquiries a fer Donnacona and his companions in captivity. Cartier replied, that Donnacona was dead, and his bones rested in the ground -that the other persons had become great lords, and were married, and mettled in France. No displeasure was evinced by the intelligence of Donnacona's death. Agona, on the contrary, seemed to be well pleased with it, probahly, es the journalist thiples, because it left him to rule in his atead. He took off his head-dreas and bracelets, hoth being of yellow leather edged with wampum, and presented them to Certier. The Letter made a suitable return to him and his attendants in srall presents, intimating that he bad brougbt many new things, which were intended for tbem. He returned the chieflain's aimple "crown." They then ate, drank, and departed.

Having thus formally renewed intercourse with the natives, Cartier sent his boats to explore a roore suitable harbor and place of lending. They reported in favor of a small river, ahout four leagues above, where the veasels were accordingly moored, and their cargoes discharged. Of the spot thus selected for a fort and harbor, as it was destined alerwarde to become celebrated in the bistory of Canade, it may be proper to give a more detailed notice of Cartier's original description. The river is atated to be fifty paces hroad, having three fatboms water at full tide, and but a foot at the ebb, having its entrance towards the south, and ita course very serpentine. The beauty and fertility of the lands bordering it, the vigorous growth of trees, and the rapidity of regetation, are highly and (I believe) very justly extolled. Near it, there is said to be "a higb and steep cliff," which it was necessary to ascend by "a way in manner of a pair of stairs," and below it, and between it and the river, an interval sufficiently extensive to accommodate a fort. A work of defence wes also huilt upon the cliff, for the purpose of kecping the "nether fort and the shipa, and all things that might pass, as well hy the great, at by this small river." Upon the cliff a apring of pure water was discovered near the fort, " adjoining whereunto," says the narrator, " we found good store of stones, which we eateemed to the diamonds" (limpid quartz). At the foot of the cliff, facing the St. Lawrence, they found
iron, and at the water's edge " certain leaves of fine gold (mices) an thick sa a man's niil."

The ground was so favorable for tillage, that twenty men labored at en acre and a half in one day. Cabbage, turnip, and lettuce seed, aprang up the eighth day. A luxurious meadow was found along the river, and the woods were clustered with a apecies of the native grape. Such wers the natural appearance and advantages of a spot which was deslined to be the future site of the city and fortress of Quebec," "but to which he gave the name of 'Charleabourg Royal.'"
Carlier lost do time in despatching two of his vessels to France, under coramand of Mace Jollobert and Stephen Noel, his brother-in-law and nephew, with letters to the king, contaiaing an account of his voyage and proceedings, accompanied with specimens of the mineral treasures he supposed himself to have discovered; and laking care to add "how Mons. Roberval had not yet cume, and that he feared that hy occasion of contrary winds and tempests, he was driven back again into France." These vessels left the newly discovered town and fort of "Cbariesbourg Royal" on the 2 d of September. And they were no sooner despatched, than Cartier determined to explore the "Saults" or rapids of the St. Lawrence, which had been described to him, and partly pointed out, during his ascent to the mountain of Montreal. Leaving the fort under the command of the Viscount Beaupre, he embarked.in two boats on the 7th of September, accompanied by Martine de Painpont and other " gentlemen," with a auitable complement of mariners. The only incident recorded of the passage up, is his visit to "the Lord of Hocheley"-a chief who had presented him a little girl, on his former visit, and evinced a friendship during his atay in the river, which be was now anxious to show that he preserved the recollection of. He presented the chief a cloak " of Paris red," garcished with buttons and hells, with two basins of "Laton" (pewter), and some knives and hatchets. He also left with this chief two boys to acquire the Indian language.

Continuing the ascent, he reached the lower "Sault" on the 11th of the month, and, on trial, found it impossible to ascend it with the foree of oars. He determined to proceed by land, and found a well-beaten path leading in the desired course. This path noon conducted him to an Indian village, where he was well received, and furnished with guidea to visit the second "Sault." Here be was informed that there was another Sault at some distance, and that the river was not navigable-e piece of information that meant either that it was not navigable by the crafl Cartier had entered the river with, or was intended to repress his furtber ndvance into the country. The day being far spent, he returped to his loats, where four hundred natives awaited his artival. He ap-

\footnotetext{
- Query-la not the word Quebee a darivative from the Alsonquin phras Redie-. - barm attered in paning by a dagorour and rocky cosat?
}
peased their curiosity, by interchanging civilitiea, and distributing sman presents, and made all speed to return to Chariesbourg Royal, where he teamed that the natives, alarmed by the formidable defences going on, had intermitted their customary visit, sud evinced signas of hostility. This inference wes confirmed by his own observations on the downward pansage, and he deternined to use the utmost diligence and precaution to sustain himself in his new position.

The rest of this voyage is wanting. Hackluyt has, however, preserved two letters of Jacquea Noel, a relative of Cartier, written at St. Malo in 1587, with the observations of latitude, courses, and distances, made by "Jobn Alphonso of Xanctoigne," who carried out La Roche, Lord of Roberval, to Canada, in 1542, and a fragment of Roberval's narrative, which indicated the sequel of Cartier's third and last voyage. From the latter, it appears that Roberval entered the barbor of Belle Iale in Newfoundland, on the 8th of June, 1542, on his way to Canads ; and while there, Cartier unexpectedly entered the same harbor, on his return to France. He reported that be was unable "with his small company" to maintain a fooling in the country, owing to the incessant bostility of the natives, and had resolved to return to France. He preeented the limpid quarta, and gold yellow mica, which he had carefully cherished, under a belief that he bad discovered in these reaplendent minerals, the repositories of gold and diamonds. An experiment was made the next day, upon what is denominated "gold ore," by which term the journalist does not probably refer to the "mica," considered, man ange in which miveralogy had not assumed the rank of a science, at "leaves of gold," bat to pieces of yellow pyrites of iron, which it is mentioned in the description of the eavirons of "Charlesbourg Royal" Carties had discovered in the alate rock. And the ore was pronounced "good" \(\rightarrow\) proof either of gross deception, or gross ignorance in the experimenter. Cartier spoke higbly of the advantages the country presented for settlement, in point of fertility. He had, however, determined to beave it. He disobeyed Roberval's order to refura, and "both he and his company" secretly left the harbor, and made the best of their way to France, being " moved," as the journalist adds, " with embition, because they would have all the glory of the discovery of these parta to themselves."

Jenuery 21st, 1829.

\title{
THE INFLUENCE OF ARDENT SPIRITS ON THE CONDLTION OF THE NORTH AMERICAN INDIANS.
}

```

8AOLT STE-MABIE, MAY 8lh, 1832

```

The effects of intemperance on the character of nations and individaals have been often depicted, within a few years, in faithfol colors, and by gifted minds. "Thoughts that breathe and words that burn" were once aupposed to be confined, exclusively, to give melody to the lyre, and life to the canvass. But the conceptions of modern benevolence have dispelled the illusion, and taught us that genius has no higher objects then the promotion of the greatest amount of good to man-that these objects come home to the "business and bosoms" of men in their every day avocations-that they lie level to every capacity, and never assume so exalted a character, as when they are directed to increase the sam of domestic happiness and fireside enjoyment-
"To mend the morals and improve the heart"
It is this consideration thet gives to the temperance effort in our day, a refined and expansive character-
"Above all Greek, sbove all Roman famo"-
which has enlisted in its cause sound heads and glowing hearts, in all parts of our country-which is daily augmenting the sphere of its inflaence, and which has already carried its precepts and examples from the little sea-board village,* where it originated, to the foot of Lake Superior. And I have now the pleasure of seeing before me a society, assembled on their firat public meeting, who have "banded together," not with such mistaken zeal as dictated the killing of Paul, or assassinaling Ceser, but for giving their aid in staying the tide of intemperance which has bean rolling westward for more than three centuries, sweeping away thousends of white and red men in its course-which has grown with the growth of the nation, and strengthened with ita strength, and which threatens with an overwhelming moral desolation all who do not adopt the rigid maximm-

> "Touch not, tarte nol, baydle not"

The British critic of the last century little thought, while moralining uron some of the weaknesses of individnal genins, that he wes uttering maxims which would encourage the exertions of voluntary associations of men to put a stop to intemperance. It was as true then as now, that " in the bottle, discontent seeks for comfort, cowardice for courage, and beshfulnesa for confidence." It was as true then, as now, that the "neg-
ligence and irregularity" which are the fruits of this babit, "if long continaed, will render knowledge ureless, wit ridiculous, and genius contemptible." "Who," be exelaims, "that ever asked succore from Becchas, was able to preserve himself from being enslaved by his ank\#liary ?" And is there a species of servitude more pernicious in its itGuence, more degrading in its character, more destructive of all physical and intellectual power, than the glavery of inebriation : The rage of the conflagration-the derastation of the flood-the fury of the tempest, ere emblematic of the moral fury of the mind under the inflaence of alcobol. It is equally ungoverable in its power, and dealractive in ita effects. But its devastations are more to be deplored, because they are the depantations of human faculties-of intellectual power-of animal energy -of moral dignity-of social happiness-of temporal bealth-of eternal felicity.

Intemperance is emphatically the parent of disease, mental and phycical. Its direct effects are to blunt the faculty of correct thinking, and to paralyze the power of vigorous action. Nothing more effectually thes away from the human mind, its ordinary practical powers of discrimination and decision, without which man is like a leaf upon the tempest, or the chafi before the wind. Dr. Darwin has aptly compared the effects of spirituous liquors upon the lungs to the ancient fable of Prometheus stealing fire from heaven, who was punished for the theft by a vulture goawing on the liver. \(\dagger\) A striking allegory : but one which is not inaptly spplied to cheracterize the painful and acnte diseases which are visited upon the inebriate. Dr. Rush was an early advocate of the ceuse. He likened the effecte of the various degrees of alcohol, in spiritnous drinks, to the ortificial mensuration of heat by the thermometer, and took a decided stand in pointing out its poisonous effects upon the syatem, in the generation of a numerous clans of diseases, acute and ebronic.

If unhealthy food had been the cause of sach disorders, the article wrould be rigidly shunned. No man would choose to eat twiee of the cicuta ; to use bread having a portion of lime in it; or to driak frequently of a preparation of sugar of lead. Even the intemperate would fear to driak of alcohol, in its state of chemical purity, for its effects would eertainly be to arrest the functions of life. Yet be will drink of this powerful drug, if diluted with acids, asceharine and coloring matter, water and various impurities, uoder the disguised names of wine, brandy, ram, malt liquors, whisky, cordials, and mixed potations, which all tend to pemper the natural depravity of the humen heart, and poison its powern of healthful action.

Alcohol is one of the preparations which were hroaght to light in the

\footnotetext{
- Dr. Johnaon.
}
\(\dagger\) 200nomia
age of the Alchenysts-when the human mind had run mad in a philosophic research after two substances which were not found in nature-the philosopher's stnne, and the universal panacea. One, it wes believed, Was to trangmute all substances it louched into gold, and the other, to cure all diseases. The two great denires of the world-wealth and long iffe, were thus to be secured in a way which Moses and the Prophets had never declared. A degree of patient ascetic research was devoted to the investigation of natural phenomena, which the world had not before witnessed; and modern science is indebted to the mistaken labors of this race of chemical monks, for many valuable discoveries, which were, for the most part, stumbled on. So far as relates to the discovery of the alcoholic principle of grains, a singular reversal of their high anticipations has ensued. They sought for a substance to enrich mankind, but found a substance to impoverish them: they sought a power to cure all diseases, but they found one to cause them. Alcohol is thus invested with great talismaoic power : and this power is not to create, hat to destroy-not to elevate, but to prosirate-not to impart life, but death.

How extengive its uses are, as a re-agent and solvent, in medicine and the arts-or if its place could be supplied, in any instances, by other sub-stances-are questions to be answered by physicians and chemists. But admitting, what is probable to my own mind, that its properties and uses in pharmacy and the arts are indispensahle in several operations, in the present atate of our knowledge-does this furnish a just plea for its ordinary use, as a bererage, in a state of bealth \(\}\) No more than it would, that because the lancet and the prohe are useful in a state of disease, they should be continued in a state of health. And do not every cleas of men who continue the use of ardent spirits, waste tbeir hlood hy a diurnal exhaustion of its strength and healthy properties, more injurious than a daily depletion; and probe theirir flesh with a fluid too subtle for the physician to extract ?

The transition from temperate to intemperate drinking, is very ensy. And those who advocate the moderale use of distilled spirits are indeed the real advocates of intemperance. No man ever existed, perhaps, who thought himself in danger of being enslaved by a practice, which he, at \(f_{f s t}\), indulged in moderation. A habit of relying upon it is imperceptibly formed. Nature is soon led to expect the adventitious aid, as a hale man, aceustomed to wear a staff, may imagine he cannot do withont it, uatil he has thrown it aside. If it communicates a partial energy, it is the energy of a convulsion. Its joy is a phrenzy. Its hope is a phantom. And all its exhibitions of ehanging passion, so many melaneholy proofs of
"the reanomble sorl run mad."
Angelic beinga are probably exiltod above all humen wakkemme-

Bat if there be anything in their survey of our actions which cansen them to weep, it is the sight of a drunken father in the domestic circle.

Instructed reason, and sound piety, bave united their voices in decrying the evils of intemperance. .Pbysicians have described its effects in deranging the absorbent vessels of the stomach, and changing the healthy organization of the system. Moralists have portrayed its fatal influence on the intellectual faculties. Divines have pointed out its destructive powers on the soul. Poetry, philosophy and science, have mourned the numbers who have been cut down by it. Common sense has raised up its voice against it. It is indeed-
> " \(-\infty\) monster of so frighful mien,
> That to be hated, needs but to be seer \({ }^{n}\)

Like the genie of Arabic fable, it has risen up, where it was least expected, and stalked through the most secret and the most pablic apartments. And wherever it has appeared, it has prostrated the human mind. It has silenced the voice of eloquence in the halls of justice and legislation. It has absorbed the brain of the acientific lecturer. It has eansed the sword to drop from the band of the military leader. It has stupefied the author in bis study, and the pastor in his desk. It has made the wife a widow in her youth, and caused the innocent child to weep upon a father's grave. We dare not look heyond it. Hope, who has attended the victim of intemperance through all the changes of his downward fortone, and not forsaken him in any other exigency, has forsaken here. Earth had its vanities to solace him, but eternity has none.
"Wounds of the heart-rare, disappointment, losen
Love, joy, and friendship's fame, and fortune's crosat
The wound that mars the Beah-the justant pain
That racks the palsied limh, or fever'd brain,
All \(\rightarrow\) il the woes that life can feel or misg,
All have theirhopes, cures, palliatives, but thio-
This ondy-mortal canker of the mind,
Grim Belial's lat attempt on humen kiad, \({ }^{n}\)

If such, then, are the effects of ardent spirits upon the condition of civilized man, who bas the preeepts of instructed reason to enlighten him; and the consolations of Christianity to support him, what must be the infuence of intemperate babits upon the aboriginal tribes? I propose to offer a few considerations upon this subject. And in so doing I disclaim all intention of imputing to one nation of the European stock, more than the other, the national crime of having introduced ardent spirits among the American Indians. Spaniards, Portuguese, Swedes, Dutch, Italians, Russians, Germans, French and English, all come in for a share of the ohloquy. They each brought ardent spirits to the New Worlda proof, it may be inferred, of their general use, as a drink in Europe, at the era of tbe diacovery. Whatever other articles the first adventarers trook to operste upon the hopes and feary of the new found people, distilled
or fermented liquor appears to have been, in no instance, overlooked or forgotten. It would be easy to show the use made of them in the West Im dies, and in the southern part of our hemisphere. But our object is confined to the colonies planted in the North. And in this portion of the continent the English and Freach have been the predominating powers. It had been well, if they had predominated in everything else-if they had only been rivals for coarage, wisdom and dominion. If they had only fought to acquire civil power-conquered to spread Christianity negotiated to perpetuate peace. But we have too many facts on record to show, that they were also rivals in spreading the reign of intemperance among the Indians; in gleaning, with avaricious band, the fura from their lodges; in stimulating them to fight in their battles, and in leaving them to their owa fate, when the battles were ended.

Nor do we, as Americans, affect to have suddenly succeeded to a better state of feelings respecting the natives than our English ancestry porsessed. They were men of sterling enterprise; of undaunted resolution; of high sentiments of religious and political liberly. And we owe to them and to the peculiar circumstances in which Providence placed us, all that we are, as a free and a prosperous people. But while they bequeathed to us these seatiments as the preparatives of our own national destiny, they also bequeathed to us their peculiar opinions respecting the Indian tribes. And these opinions have been cherished with obstinacy, even down to our own times. The noble sentiments of benevolence of the 19 th century had not dawned, when we assumed our station in the family of nations. If they were felt by gifted individuals, they were not felt by the body of the nation. Other duties-the imperious duties of self-existence, national poverty, wasted resources, a doubtful public credit, a feeble population, harassing frontier wars, pressed heavily upon us. But we have seen all these causes of national depression passing away, in less than half a century. With them, it may be hoped, have passed away, every obstacle to the exercise of the most enlarged charity, and enlightened philanthropy, respecting the native tribes.

Nationality is sometimes as well cbaracterized by small as by great things-by names, as by customs. And this may be observed in the treatment of the Indians, so far as respects the subject of ardent spirits. Under the French goverament they were liberally supplied with hrandy. Under the Egglish, with Jamaica rum. Under the Americans, with whisky. These constitute the fire, the gall, and the poison ages of Indian history. Under this triple curse they have maintained an existence in the face of a white population. But it has been an exidence merely. Other nations are said to have had a golden age. But there has been 00 golden age for them. If there ever was a state of prosperity among tbern, which may be likened to it, it wes when their camps were crowned with temporal abundance-when the races of animals, furred and unfur-
red, placed food and clothing within the reach of all-and when they knew no intoxicating driuk. To counterbalance these adviatages, they were, however, subject to many evils. They were then, as they are now, indolent, improvident, reveageful, warlike. Bravery, manaal atrength, and eloquence, were the cardinal virtues. And their own feuda tept them in a state of perpetual insecurity and alarn. The increased value given to furs, by the arrival of Europeans, created a new era in - their history, and accelerated their downfall. It gave an increased energy and new object to the chase. To reward their aclivity in this employment, ardent apirits became the bounty, rather than the price. A twofold injury ensued. The animals upon whose flesh they had subsisted became scarce, and their own constitutions were undermined with the subitle stimulant.

Historical writers do not always agree : but they coincide in their testimony reapectiog the absence of any intoxicating drink among the morthers Indians, at the time of the discovery. It is well attested that the Azteeks, and other Mexican and Southern tribes, had their pulque, and other intoxicating drinks, which they possessed the art of making from various native grains and fruits. But the art itself was confined, with the plants employed, to those latitudes. And there is no historical evidence to prove that it was ever known or practised by the tribes situated north and east of the Gulf of Mexico. Dr. Robertson, an able and faithful describer of lndian manners, fully concurs with the Jesuit authors, in saying that no such beverage was known in the north, until Europeana found it for their pecuniary interest to supply it. After which, intoxication became as common among the northern as the southern tribes.*

Three hundred and forty years ago there was not a white man in America. Columbur discovered the West India Islands; hut Cabot and Verrizani were the discoverers of North America. Cartier and Hudson followed in the track. The first interview of Hudsod with the Mohegon tribes, took place at the mouth of the river which now bears his pame. It is remarkable as the scene of the first Indian intoxication among themHe had no sooner cast anchor, and landed from his boat, and passed a friendly salutation with the natives, than he ordered a botle of ardent apirits to be brought. To show that he did not intend to offer them what he would not himseff taste, an attendant poured him out a cup of the liquor, which he drank off. The cup was then filled and passed to the Indians. But they merely smelled of it and passed it on. It had nearly gone round the circle untasted, when one of the chiefs, bolder than the rest, made a short harangue, saying it would be digrespectiul to return it untasted, and declaring his intention to drink off the potion, if bo chould be killed in the attempt. He drank it off. Dizriness and sto

\section*{- Bobartion'a Eistary of Amorica}
por immediately enoed. He sank down and fell into a sloep-the aleay of death, as his companions thought. But in due time he awoko-deelared the happineas be had experienced from its effects-anked agaif for the eap, and the whole wasembly followed his example.*

Nor was the first meeting with the New England tribes very disaimibar. It took place at Plymouth, in 1620. Massasoit, the celebrated chief of the Poicnomats, came to visit the new setlers, not long after their landing. He was received by the English governor with military music and the discharge of some muskels. After which, us Governor kissed his hand. Massasoit then kissed him, and they both sat dowa together. "A poi of strong water," as the early writers expressed it, was then ordered, from which both drank. The chief, in his simplicity, drank so great a draught that it threw him into a violent perspiration during the remainder of the interview. \(\dagger\)

The first formal incerview of the Freach with the lndians of the St . Lawrence is also worthy of being referred to, as it appears to have bean the initial step in vitiating the tasle of the Indiang, by the introduction of a foreign drink. It took place in 1535, on board one of Cartier's ships, lying at anchor near the Island of Orleans, forty-nine years hefore the arrivel of Amides and Barlow on the coast of Virginia. Donnaconna, a chief who is courteously styled the "Lord of Agouhanna," visited the ahip with twelve canoes. Ten of these he bad stationed at a distance, and with the other \(t w 0\), conlaining sixteen men, he approached the vessela When he drew near the headmost vessel, he began to utter an earnest address, accompanied with violent gesticulation. Carlier hailed his approach in a friendly manner. He had, the year before, captured two Indians on the Gulf of St. Lawrence, and he now addressed the chief through their intapretation. Donnaconna listened to his native language with delight, and was so much pleased with the recital they gave, that he requested Cartier to reach his arm over the side of the vessel, that he might kiss it. He was not content with this act of salutation, but fondled it, hy drawing the arm gently around his neck. His watchful ceution did not, however, permit him to venture on board. Certier, willing to give him a proof of his confidence, then descended into the chief's canoe, and ordered hread and wine to be brought. They ate and drank together, all the Indians present participating in the banquet, which eppears to have been terminated in a temperate manner. \(f\)

But like most temperafe beginnings in the use of spirits, it soon led to intemperance in its most repulsive forms. The taste enkindled by wine, was soon fed with brandy, and apread among the native bands like a wildfre. It gave birib to disease, discond, and crime, in their mont

}
shoeking forms. Too late the government and the clergy saw their error, and attempted to arrest it ; but it was too deeply seated among their own countrymen, as well as among the Indians. Every effort proved unsuccessful; and the evil went on untii the Canadea were finally transferred to the British crown, with this "mortal canker" burning upon the northern tribes. Those who have leisure and curiosity to turn to the early writera, will see abundant evidence of its deep and wide-spread influence. It became the ready means of rousing to action a people averse to, long continued exertion of any kind. It was the reward of the chase. It was the price of blood. It was the great bar to the successful introduction of Christianity: lit is impossible that the Indian should both drink and pras. It was impossible thes, and it is impossible now: and the misgionary who entered the forest, with the Bible and crucifix in one hand, and the bottle in the other, might say, with the Roman soliloquist, who deliberated on self-murder,

> "My bane and antidote are both before me : While this informe me I shall never die Thir in a moment bringe rae to my end."

National rivalry, between the English and French governments, gave a character of extreme bitterness to the feelings of the Indians, and served to promote the passion for strong drink. It added to the horrors of war, and accumulated the miseries of peace. It was always a ctruggle between these nations which should wield the Indian power; and, so fur as religion went, it was a struggle between the Catholic and Protestant tenets. It was a power which both had, in a measure, the means of putting into motion: but neither had the complete mesas of controlling ih, if we concede to them the perfect will. It would have mitigated the evil, if this struggle for mastering the Indian mind bad terminated with a state of war, but it was kept up during the feverish intermissions of peace. Political influence was the ever-present weight in each side of the scale. Religion threw in her aid; but it was trade, the possession of the fur trade, that gave the preponderating weight. And there is nothing in the history of this rivalry, from the arrival of Roberral to the death of Montcalm, that had so permanently pernicious an influence as the sanction which this trade gave to the use of ardent spirits.

We can but glance at this subject; hut it is a glance at the track of a tornado Destruction lies in it course. The history of the fur trade is closely interwoven with the history of intemperance among the Indians. We know not bow to effect the separation. Look at it in what era you will, the barter in ardent spirits constitutes a prominent feature. From Jamestown to Plymouth-from the island of Manhattan to the Lake of the Hills, the traffic was introduced at the earliest periods. And we cannot now put our inger on the map, to indicate a apot where ardent epirita is not known to the natives. Is it at the mouth of the Columbin,
the sources of the Multnomah, or the Rio del Norde-the pacses of the Rocky Mountains on Peace River, or the shores of the Aretic Sea ? it is known at all these places. The natives can call it by name, and they place a value on itt posseasion. We do not rish to convey the idea that it is abundant at these remote places. We have reason to beheve itis seldom seen. But ore alao behere that in proportion as it is scarce-in proportion as the quantity is small, and the oceasion of ite issue rare, so is the price of it in sale, and the value of it in git, enhanced. And just so fir as it is used, it is pernicious in effect, unnecessary in practice, unwise in policy.

The French, who have endeared themselves so much in the affections of the Indians, were earlier in Canada tban the English upon the United States' coast. Carlier's treat of wine and bread to the Iroquois of the St. Lawrence, happened eighty-five years before the landing of the Pilgrims. They were also earlier to perceive the evils of an unrestrained trade, in which nothing was stipulated, and nothing prohibited. To prevent its irregularities, licenses were granted by the French government to individuals, on the payment of a price. It was a boon to superannuated officers, and the number was limited. In 1685, the number was twenty-five. But the remedy proved worse than the disease. These hicenses became negotiable paper. They were sold from hand to hand, and gave birth to a trafic, which assumed the same character in temporol affairs, that "indulgences" did in spiritual. They were, in effect, licenses to commit every species of wrong, for those who got them at last, were generally persons under the goverament of no bigh standard of moral responsibility; and as they may be supposed to have paid well for them, they were sure to make it up by excessive exactions upon the Indians. Courier du bois, was the term first applied to them. Merchand noyageur, was the appellation at a subsequent period. But whatever they were called, one spirit actuated them-the spirit of acquiring wealth by driving a gainful trafic with an ignorant people, and for this parpose ardent spirits was but too well adapted. They transported it, along with articles of necessity, up long rivers, and over difficult portages. And when they had reached the borders of the Upper Lakes, or the banks of the Saskelchawine, they were two far removed from the inflaence of courts, both judicial and ecclesiastical, to be in much dread of them. Feuds, strifes, and murders ensued. Crime strode unchecked through the land. Every Indian trader became a legislator and a judge. His word was not only a law, but it was a law which poasessed the property of undergoing as many repeals and mutations as the interest, the pride, or the passion of the individual rendered expedient. If wealth was accumulated, it is not intended to infer that the preasing wante of the Indians were not relieved-tbat the trade was not a very acceptable and important one to them, and that great peril and expense were not encoats-
tared, and a high degree of enterprise diaplayed in its prosecotion. Bh is is conlended, that if real wants were relieved, artificial onee were cre-cod-that if it subatituted the gun for the bow, and shrouds and blanzete in the plece of the more expensive elothing of beaver akins, it alo sobstitated ardent spirits for water-intoxication for sobriety-disense for health.

Those who entertain the opinion that the fall of Quebec, colebrated in Figland and America as a high military achievement, and the conasquent surrender of Cemada, produced any very important improvement in this state of things, forget that the leading principles and desires of the haman heart are alike in all nations, acting under like circumstances. The desire of amassing wealth-the thirst for exercising power-the pride of information over ignorance--the power of vicious over virtuons priaciples, are not confined to particular erad, nations, or latitudes. They belong to mankind, and they will be porsued with a zeal as irrespective of equal and exact justice, wheraver they are not restrained by the enmobling maxims of Christianity.

Whoever feels interested in looking back into this period of our commercial Indian affairs, is recommended to peruse the published atatistical and controversial volumes, growing out of the Earl of Selkirk's schemen of colonization, and to the proceedings of the North West Compeny. This iron monopoly grew up out of private edventure. Such golden secounts were brought out of the country by the Tods, the Frobiabers, and the M'Tavishes, and M'Gillvrays, who first visited it, that every bold man, who had either talents or money, rushed to the theatre of action. The boundary wbich had been left to the Freach, as the liasik of trade, was soon passed. The Missinipi, Athabasca, Fort Chipewyan, Slave lake, Mackedzie's and Copper Mine Rivers, the Unjigah and the Oregon, were reached in a few years. All Arctic Anerica was penetraled. The British government is much indehted to Scottish eaterprise for the extension of its power and resources in this quarter. But while weadmire the zeal and boldness with which the limits of the trade were extended, we regret that a belief in the necessity of using ardent spirite caused them to be introduced, in any quantity, among the North West tribes.

Other regions have been explored to spread the light of the gospel. This was traversed to extend the reiga of intemperance, and to prove that the love of gain was so strongly implanted in the breast of the white man, as to carry him over regions of ice and snow, woods and welers, where the natives had only been intruded on by the Muak \(O x\) and the Polar bear. Nobody will deen it too much to say, thet wherever the current of the fur trade set, the nations were intoricated, demoralized, depopulated. The terrible scourge of the small pox, which broke eat in the country north weat of Lake Superior in 1782, was scarcely mere fald to the natives, though more rapid and striking in its effects, than the
pewer of ardent apirits. Nor did it produce eo great a moril effiction. Fer those who died of the varioloid, were spared the death of ebriety. Fors were glened with an iron hand, and rum wes given out with an irco heart. There wes no remedy for the rigors of the trade; and there was no appeal. Heaver was sought with a thirst of gain as great as that which carried Cortez to Mexico, and Pizarro to Pera. It had deadened the ties of humanity, and cut asunder the cords of private failh." Like the Spaniard in his treatment of Capolicon, when the latter had given him the house full of gold for his ransom, be was bimself basely executed. So the northern chief, when be had given bis all, gave himself as the victinn at last. He was not, however, consumed at the stabe, but at the botile. The sword of bis execationer was spinits-his gold, beaver atine. Asd no mines of the precious metals, which the world bas ever produced, have probably been tnore productive of wealth, than the fur-yielding regions of North America.

But while the products of the chase have yielded wealth to the white man, they bave produced uisery to the Indian. The latter, anffering for the meape of subsistence, like the child in the parable, had anked for hread, and be received it; hat, with it, be received a scorpion. And it is the sting of the acorpion, that has been raging among the tribes for more than two centuries, causing sickness, death, and depopulation in ita track. It is the venom of this sting, that has proved emphatically

> "- the blight of human blies!
> Curue to all state of mant. but most to this."

Let me not be mistaken, in ascribing effects disproportionate to their cause, or in overlooking adrantages which have brought along in their traiz, a ariking evil. I am no admirer of that sickiy philosophy, which looke back upon a state of nature as a atate of innocence, and which cannot appreciate the benefits the Iddian race have derived from the discovery of this portion of the world by civilized and Christian nations. But white I would not, on the one hand, conceal my sense of the advantagea, temporal and spiritual, which hinge upon this discovery, I would not, on the other, digguise the evils which intemperance has caused among them ; nor cease to bold it up, to the public, as a great and deatroying ovil, which was early introduced-which has spread extensively-which is in active operation, and which threatens yet core disastrous consequences to this unfortuate race.

Writers bave not been wanting, who are prone to lay hut little atress mpon the destructive influence of ardent spirits, in diminishing the astive population, and who have considered its effects as trilling in comparison to the want of food, and the enhanced price created by this want. \(\dagger\) Tbe

\footnotetext{
* The marter of Wedin, the cold-blooded assassinstion of Keveny, and the shooting of Semple, are appealed to, as justifying the force of this remary.
f The North American Review. Sanford's History of the Caited States, beforo the Revolution.
}
abondance or acarcity of food is e principto in polition eccemony, which is assumed as the primary cause of depopulation. And, as such, we see no reason to question its soundness. If the value of labor, the price of clothing and other necessary commodities, can he referred to the varying prices of vegetable and animal food, we do not ree that the fact of a people's being civilized or uncivilized, should invelidate the principle; and when we turn our eyes upon the forest we see that it does not. A pound of beaver, which in 1730, when animal food was abundent, was worth here about a French crown, is now, when food is acarce and dear, worth from five to six dollars; and coneequently, one pound of beaver now will procure as much food and clothing as five pounds of the like quality of beaver then. It is the failure of the race of furred animals, and the want of industry in huating them, that operate to produce depopulation. And what, we may ask, has so powerful an effect in destroying the energies of the hunter, as the vice of intermperance? Stupefying hie mind, and enervating his body, it leavea him neiber the vigor to provide for bis temporary wants, nor the disposition to inquire into those which regard eteraity. His natural affections are blunted, and sll the slerner and nobler qualities of the Indian mind prostrated. His family are neglected. They first become objects of pity to our citizens, and then of disgust. The want of wholesome food and comfortable clothing produce direase. He falls at last bimself, the victim of disewe, ruperinduced from drinking.

Such is no exaggerated picture of the Jodian, who is in a situation to contract the habit of intemperance. And it is only within the last year or eighteen months-it is only since the operation of Temperance principles has been felt in this remote place, that scenes of this kind bave become unfrequent, and have almost ceased in our village, and in our settlement. And when we look abroad to other places, and observe the spread of temperance in the wide area from Louisiana to Maine, we may almost fancy we behold the accomplishment of Indian fable. It is related, on the best authority, that among the extravagances of Sparisb enterprise, which characterized the era of the discovery of America, the intives had reported the existence of \(a\) fountain in the interior of one of the islands, possessed of such inagicul virtues, that whoever bathed in ito waters would be restored to the bloom of youth and the vigor of manhood. In eearch of this wonderful fountsin historians affirm, that Ponce de Leon and his followers ranged the island. They only, however, drew apon themselves the charge of credulity. May we not suppose this tale of the saluary fountsin to be an Indian allegory of temperance? It will, at least, admit of this application. And let ue rejoice that, in the era of temperance, we have found the spring wbich will restore bloom to the cheeks of the young man, and the panacea that will remove disease from the old.

Whea we consider the effects which our owa hamble efforts as iohnbitants of a distant post have produced in this labor of humanity, have we not every encouragement to persevere ? Is it not an effort sanctioned by the noblest affections of our natore-by the soundest principles of philanthropy-by the bighest aspirations of Christian benevolence? Is it not the work of patriots as well as Christians ? of good citizens as well as good neighbors? Is it not a high and inperious duty to rid our land of the foul stain of intemperance? Is it a duty too hard for as to accomplish ? Is there anytbing unreasonable in the voluntary obligations by which we are bound? Shall we lose property or reputation by laboring in the cause of temperance ? Will the debtor be less able to pay his debts, or the creditor less able to collect them? Sball we injare man, women or child, by dashing away the cup of intoxication? Shall we incur the charge of being denominated fools or madmen? Shall we violate say principles of morality, or any of the maxims of Christianity? Shall we run the risk of diminishing the happiness of others, or putting our own in jeopardy? Finally, shall we injure man-shall we offend God ?

If neither of these evils will result-if the highest principles of virtue and happidess sanction the measure-if learning applauda it, and religion approves it-if good must result from its success, and injury cannot accrue from its failure, what further motive need we to impel us onward, to devote our best faculties in the cause, and neither to faint nor reat till the modern hydra of intemperance be expelled from our country ?

\section*{VENERABLE INDIAN CHIIEF.}

The Catarangus (N. Y.) Whig, of a late date, mentions that Gov. Blacksake, the Grand Sachem of the Indian nation, was recently in that plece. He resides on the Alleghany Reservation, about twenty miles from the village; is the saccessor of Cort Planter, as chicf of the Six Nations-a nephew of Joseph Brant, and uncle of the celebrated Fed Jacket. He was bort near Cayuga Lake in 1749, being now ninety-six years of age. He was in the battle of Fort Stanwix, Wyoming, \&c., and was a warm friend of Gen. Washington duriag the Revolution. He was in Washington's camp forty days at the close of the Revolution-wan appointed chief by him, and now wears suspended from his neck a beautiful silver medal presented to him by Gen. Waahington, bearing date 1796.

\title{
MANNERS, CUSTOMS AND OPINIONS.
}

\section*{DOMESTIC AND SOCIAL MANNERS OF THE INDIANS, WHILE ON THEIR WINTERING GROUNDS.}

The Indian, who takes his position as an orator, in front of his people, and before a mixed assemblage of white men, is to be regarded, in a meagure, as an actor, who has assumed a part to perform. He regards bimself as occupying a position in which all eyes are directed upon him, in ecrutiny, and he fortifies himself for the occasion, by redoubled efforts in cautiousness and studied stoicism. Rigid of muscle, sad suppicious of mind by nature, be brings to his aid the advantages of practised art, to bear him out in speaking for bis tribe, and to quit him manfully of his task by ottering sentiments worthy of them and of himeelf. This is the statue-like and artistic phasis of the man. It is here that he is, truly
"A man without a fear-a sloic of the wood"
All this is laid aside, so far as it in assumed, when he retarm from the presence of the "pale-faces," and rejoins his friends and kinctred, in biz own village, far away from all public gaze, in the deep recesses of the forest. Let us follow the man to this retreat, and see what are his domertic manners, habils, amusements, and opipions.
I have myself visited an Indian camp,in the far-off ares of the Norphwest, in the dead of winter, under circumstances suited to allay his saspicions, and inspire confidence, and have been atruck with the marked change there is in his social temper, character, and feelings. And Ihave neceived the same teatimony from Indian traders, who have spent years among them in these secluded positions, and been received by them an friends and kindred. All indeed, who have bad frequent and full opportanities of witnessing the red man on bia hunting grounds, concar is bearing evidence to his social, hospitable, and friendly habits and mannera. Viewed in such positions, the most perfect sincerity and cheerfulaess prevail; and their intercourse is marked with the broadest principles of charity and neighborly feeling. The reatraint and ever watchfol surpicion which they evince at the frontier post, or in other situation exposed to the scrutiny and cupidity of white men, is thrown aside and gives way to easc, sociability and pleasantry. They feel while thas ensconced in the shades of their native foresta, a security unknown to their breasta in any other situations. The strife seems to be, who shall excel in offices of friendahip and charity, or in apreading the festive board. If one is more fortunate than the other, in taking meat, or wielding the arrow or apear, the spoil in set apart for a feast, to which
\(\pm 1\) the edolta, wilbout distipetion, are invited. When the ret time of the fent anives, each one, mecording to ancient custom, takes bis dish and apoon, and proceeds to the enterteiner's lodge. The victals aro serred up with scrupulocs adention that each receives a portion of tho beat parts. While at the meal, which is prolonged by cheerful converation, anecdote, and little narrations of personal adventure, the femalea ere generally listenera; and nove, except the aged, ever obtrude a remark. The young women and girls show that they partake in the feativity by amiles, and are scrupulous to evince their attention to the elder part of the company. Conversation is chiefly engrossed by the ofd mean and chieff, and middle-aged men. Young men, who are deairous to acquire a standing, seldom offer a remark, and when they do, it is with modesty. The topics discussed at these public meals relate generally to the chace, to the seevs they have heard, or to personal occurrencea about the viliage; or to deeds, "real or fabulous," of "old lang nype;" bat the mattera are discussed in a lively, and not in a grave style. Business, if we may be allowed that term for what concerna their trado and government intereourse, is never introduced except in formal couscils, convened apecially, and opened formally by amoking the pipe. It seems to be the drin of conversation, in these sober festivities (for it muat be recollected that we are speaking of the Indians on their wistering grounda and beyond the reach, cerlainly beyond the free or ordinary use of andent spirits), to extract from their bunta and adventures, whatever will admit of a pleasant turn, draw forth a joke, or excite a laugh. Bidiculous misadventures, or comical situations, are sure to be applonded in the recital. Whatever is anti-social, or untoward, is passed over, or if referred to by another, is parried off, by some allusion to the acene before them.

Religion (we use this term for what conceras the great spirit, sacred dreams, and the ceremonies of the Meda or medicine dance), like bucinens, is reserved for its proper occasion. It does not form, as with us, a free topic of remark, at least among those who are professors of tho dance. Thus they cheat awas the hours in pleasantry, free, but not tumultuous in their mirth, but as ardently bent on the enjognent of the present moment, as if the sum of life were contained in these three words, "eat, drink, and be merry." When the feast is over, tho womes return to their lodges, and leave the men to amoke. On their return, they commence a conversation on what they bave heard the men advance, and thus amone themelves till their husbands return The end of all is generally some good advice to the children.

The company in these ordinary feasts is as general, with respect to the rank, age or standing of the guesta, as the most unlimited equality of righta can make it. All the aged and many of the young are isvited. There is, however, anothar feast inatituted, at certain times
daring the season, to which young persons only are invited, or admitted, except the entertainer and his wife, and generally two other aged persons, who preside over the feast and administer its rites. The object of this feast seems to be instruction, to which the young and thoughticem are induced to listen for the anticipated pleasure of the feast. Before this feast commences, the entertainer, or some person fluent in speech, whom he has selected for the purpose, gets up and addreases the yoath of both sexes on the subject of their course through life. He admonishes them to be atlentive and respectual to the aged and to adhere to their counsels: never to acoff at the decrepid, deformed, or hlind: to obey their parents: to be modest in their conduct : to be charitable and hospitable: to fear and love the great Spirit, who is the giver of life and every good gif. These precepts are dwelt upon at great length, and generally enforced by examples of a good man and woman and a bad man and woman, and after drawing the latter, it is ever the custom to say, "you will be like one of these." At the end of every sentence, the ligteners make a general cry of had. When the advice is finished, an address, or kind of prayer to the great Spirit is made, in which be is thanked for the food before them, and for the continuance of life. The speaker then says, "Thus the great Spirit supplies us with food; set justly, and conduct well, and you will ever be thus boontifully supplied." The feast then commences, and the eidera relax their mander and mix with the rest, hut are still careful to preserve order, and a decent, respectful behavior among the guesta.

Let it not be supposed, however, that the Indian's life, while on his wintering grounds, is a round of feasting. Quite the contrary; and his feasts are often followed by long and painful fasts, and the sererity of the seasons, and scarcity of game and fish, often reduce himself and family to the verge of starration, and even death. When the failure of game, or any other causes, induce the hunter to remove to a new circle of country, the labor of the removal falls upon the female part of the family. The lodge, utensils and fixtures of every kind, are borne upon the women's backs, sustained by a strap of leather around the forehead. On reaching the inteoded place of encamprnent, the snow is cleared away, cedar hranches brought and spread for a flooring, the lodge set up, the moveables atowed away, wood collected, and a fire built, and then, and not until then, can the females sit down and warm their feet and dry their moccagins. If there be any provisions, a supper is cooked. If there be none, all studiously strive to conceal the exhibition of the least concern on this account, and seek to divert their thoughts hy conversation quite foreign to the subject. The little children are the only part of the family who complain, and who are privileged to complain, bot even they are taught at an early age to suffer and be silent. Genetlly, womething is reserved by the mother, when food becomes nearce,
to atisisy their clamors, and they are satiafied with little. On auch oces sions, if the family have gone supperless to rest, the father and eldar sons rise early in the morning in bearch of something. If one has the luck to kill even a partridge or a aquirrel, it is immediately carried to the lodge, cooked, and divided into as many parts as there are members of the family. On these occasions, the elder ones often make a merit of relinquishing their portions to the women and children. If nothing rewarls the search, the whole day is spent by the father upon his anowshoes, with his gun in his hands, and he returas at night, fatigued, to hia couch of cedar branches and rush mats. But he does not return to complain, either of his want of succeas, or his fatigue. On the following day the same routine is observed, and days and weeks are often thus consumed without being rewarded with anything capable of sustaining life. Instances have beea well authenticated, when this state of wretchedness has beed endured by the head of a family until he has become mo weak as to fall in his path, and freeze to death. When all other means of sustaining life are gone, the skins he has collected to pay his credits, or purchase new supplies of clothing or ammunition, are eaten. They are prepared by removing the pelt, and roasting the skin until it acquires a certain degree of crispoess. Under all their sufferings, the pipe of the hunter is his chief solace, and is a solace often resorted to. Smoking parties are frequently formed, when there is a acarcity of food not tending, as might be supposed, to destroy social feeling and render the temper sour. On these occasions the entertainer seads a mesaage to this effect: "Come and smoke with me. I bave no food; but we can pass away the evening very well without it." All acknowledge their lives to be in the hand of the great Spirit ; feel a conviction that all comes from him, and that although be allows them to suffer, he will again supply them. This tends to quiet their apprehensions; they are fatalists, however, under long reverses, and submit patiently and silently to what they believe to be their deatiny. When bunger and misery are past, they are soon forgotten, and their minds are too eagerly intent on the enjoyment of the present good, to feel any depression of spirits from the recollection of the past, or to hoard up anything to provide against want for the future. No people are more easy, or less clamorous under sofferings of the deepest dye, and none more happy, or more prone to evince their happiness, when prosperous in their affins.

\section*{SKETCHES OF THE LIVES OF}

\section*{NOTED RED MEN AND W0MEN}

\section*{WHO HATE APPEARED OR TIE WRSTBRE COAFINSET.}

\section*{CONFESSIONS OF CATRERINE OGEE WYAN AKWUT ORWA; OR THE WORAN OF THE RLUE-ROBED CLOUD, THE PEOPEETEES OF CEEGOIYEGON.}
[Those confercions of the Weatern Pyuboness were made ator ahe hed relisquished the propbetic office, discarded all the ceremonies of the Iadian Modóminand fimbriving and anited henelf to the Mothoditt Episcopal chareb, of which, ap to onr latest detee, abo romaioed s conviatent member. They are marated in hor ota worde.]

Whes I was a girl of about twelve or thirteen years of age, my mothar told me to look out for something that would happen to me. Accordingly, ane morning early, in the middle of winter, I found an unusual aign, and ran off, as far from the lodge as I could, and remeined there antil my mother came and found mo out. She knew what wes the matter, and brought me aearer to the family lodge, and bsde me help ber in making a small lodge of brancbes of the spruce tree. She told me to remain there, and keep awny from every one, and as a diversion, to keep myeelf employed in chopping wood, and that she would bring me plenty of prepared bass wood barls to twist into twine. She told me she would come to see me, in two days, and that in the meantime I must not even taste anow.

I did as directed; at the end of two days she came to see me. I thought she would surely bring me sonething to eat, but to my diseppointment she hrought nolhing. I suffered more from thirst, than bunger, though I felt my slomech gnawing. My mother sat quietly down and said (atter ascertaining that I bad not tasted anything, as she directed), " My child, you are the youngest of your sisters, and none are now left me of all my sons and children, but you fow" (alluding to her two elder sisters, berself and a little son, still a mere lad). "Who," she continued, "will take care of us poor wotnen? Now, ny daughter, liten to me, and try to obey. Blacken your face and fast reaky, that the Master of Life may have pity on you and me, and on us all. Do not, in the leant, deviate from my counoels, and in two days more, it
will come to yoo. He will help you, if you are determined to do what is right, and tell me, whether you are favored or not, by the tree Great Spirit; and if your visions are not good, reject them." So saying, sha departed.

I took my little hatchet and cut plenty of wood, and twisted the card that was to be used in sewing ap puk way oon un, or mata, for the use of the family. Gradually, I began to feel less appetite, but my thirst coarunued; still I was fearful of touching the snow to allay it, by sucking it, as my mother had told me that if I did so, though secretly, the Great Spirit would see me, and the lesser spinits also, and that my fasting. would be of no use. So I continued to fast till the fourth day, when my mother came with a little tin dish, and filling it with snow, she came to my lodge, and mas well pleased to find that I had followed her injunctions. Sbe melted the anow, and told me to drink it. I did so, and felt refreshed, but had a desire for more, which she told me would not do, and \(I\) contented myself with what she had given me. She again told me to get and follow a good vision-a vision that might not only do us good, but also benefit mankind, if I could. She then left me, and for two days she did not come near me, oor any human being, and I was left to my own reflections. The night of the sixth day, I fancied e voice called to me, and said: "Poor child! I pity your condition; come, you are invited this way ;" and I thought the voice proceeded from a certain distance from my lodge. I obeyed the summons, and going to the spot from which the voice came, found a thin shining path, like a silver cord, which I followed. It led straght forward, and, it seemed, npward. No. 3. After going a short distance I atood still, and aaw on my right hand the new moon, with a flame rising from the top like a candle, which threw eround o broad light. No. 4. On the left appeared the sun, near the point of its setting. No. 11. I went on, and I beheld on my right the face of Kau ge gag be qua, or the everlasting woman, No. 5 , who told me her name, and said to me, "I give you my name, and you may give it to another. I also give you that which I bave, life everlasting. I give you long life on the earth, and skill in saring life in others. Go, you are called on high."
I went on, and saw a man standing with a large circular body, and rays from bis head, like horns. No. 6. He said, "Fear not, my name is Monedo Wininees, or the Little man Spirit. I give this name to your first son. It is my life. Go to the place you are called to visit." I followed the path till I could see that it led up to an opeoing in the aliy, when I heard a voice, and standing still, saw the figure of a man standing pear the path, whose heed was sarrounded wilh a brilliant halo, and his hreast was covered with equeres. No. 7. He said to me: "Look at me; my name is \(O\) Shau waut e geoghich, or the Bright Blue Sky. Iam the veil that covers the opening into the sisy. Stand and listen to me.

Do not be afraid. I am going to endow you with gifts of life, and pat you in array that jou may withstand and endure." Immediately I saw myself eacircled with bright points which rested against me like needlea, but gave me no pain, and they fell at my feet. No. 9. This was repeated several times, and at each time they fell to the ground. He said, " wait and do not fear, till I have aaid and done all I am about to do." I then felt different instruments, firat like awls, and then like naila stuck into my flesh, hut neitber did they give me pain, but like the needles, fell at my feet, as often as they appeared. He then said, "that is good," meaning my trial by these points. "You will see length of days. Advance a little farther," said he. I did so, and stood at the commencement of the opening. "You have arrived," said he, "at the limit you cannot pass. I give you my name, you can give it to mother. Now, return! Look around you. There is a conveyance for you. No. 10. Do not be afraid to get on its back, and when you get to your lodge, you most take that which sustains the human body." I turned, and saw a kiod of fish swimming in the air, and getting upon it as directed, was carried back with celerity, my hair floativg behind me in the air. And as soon as I got back, my vision ceased.

In the morning, being the sixth day of my fast, my mother came with a little bit of dried trout. But such was my sensitiveness to all sounds, and my increased power of scent, produced by fasting, that before she came in aight I heard her, while a great way off, and when she came in, I could not bear the smell of the fish or herself either. She said, "I bave hrought something for you to eat, only a mouthful, to prevent your dying." She prepared to cook it, but I said, "Mother, forbear, I do not wish to eat it-the smell is offersive to me." She accordingly lef off preparing to cook the fish, and again encooraged me to persevere, and try to become a comfort to her in her old age and bereaved state, and left me.

I attempted to cut wood, as usual, but in the effirt I fell hack on the snow, from weariness, and lay some time; at last I made an cffort and rose, and went to my lodge and lay down. I again saw the vision, and each person who had before spoken to me, and heard the promises of differeat kinds made to me, and the songs. I went the game path which I had pursued before, and met with the same reception. I aloo had another vision, or celestial visit, which I shall presently relate. My mother came again on the seventh day, and brought me some pounded corn hoiled in snow water, for she said I must not drink water from lake or river. After taking it, I related my vision to her. She said it was good, and spoke to me to continue my fast three days longer. I did so; at the end of which ahe trook me home, and made a feast in honor of my arccess, and invited a great many guests. I was told to eat sparingly, and to take nothing too hearty or substantial; hut this was unnecessary, for my abatinence had made my senses so acute, that all animal food had - groae apd disegreeable odor.

After the seventh day of my last (ahe continued), while I was lying in my lodge, I saw a dark round object descending from the aky like a round stonc, and enter my lodge. As it came near, I saw that it had amall feet and hands like a human hody. It spoke to me and said, "I give you the gift of seeing into futurity, that you may use it, for the benefit of yourself and the lndians-your relations and tribes-people." It then departed, but as it went away, it assumed wings, and looked to me like the red-headed woodpecker.
In consequence of being thus favored, I assumed the arts of a medicine woman and a prophetess; but dever those of a Wabeno. The first time I exercised the prophetical art, was at the strong and repeated solicitations of my friends. It was in the winter season, and they were then encamped west of the Wisacola, or Brule river of Lake Superior, and between it and the plains west. There were, besides my mother's fancily and relatives, a considerable number of families. They had been some time at the place, and were near starving, as they could find no game. One eveniog the chief of the party came into my mother's lodge. I bad lain down, and was supposed to be asleep, and he requested of my mother that she would allow me to try my skill to relieve them. My mother spoke to me, and after some coaversation, she gave ber consent. I told them to build the Jee suk aun, or prophet's lodge, atrong, and gave particular directions for it. I directed that it should consist of ten posts or saplings, each of a different kind of wood, which I named. When it was finished, and tightly wound with skins, the entire population of the encampment assembled around it and I went in, taking only a small drum. I immediately knelt down, and holding my head near the yround, in a position as near as may be prostrate, began beating my drum, and reciting my songs or incantations. The lodge commenced shaking violently, by supernatural means. I knew this, hy the compressed current of air above, and the noise of motion. This being regarded hy me, and by all without, as a proof of the presence of the spirits I consulted, I ceased beating and singing, and lay still, waiting for questions, in the position I had at first assumed.

Tbe first question put to me, was in relation to the game, and where it was to be found. The response was given by the orbicular spinit, who had appeared to me. He said, "How short-sighted you are! If you will go in a west direction, you will find game in abondance." Next day the camp was hroken up, and they all moved westward, the buters, as asual, going far ahead. They had not proceeded far beyond the bounds of their former hunting circle, when they came upon trackg of moose, and that day, they killed a female and two young moose, nearly full-grown. They pitched their encampineot anew, and bad abundance of animal food in this new positior.
My reputation was established by this success, and I was after-
wards noted in the tribe, in the art of a medicine woman, and song the sougs which 1 have given to you. About four years after, I wa married to O Mush Kow Egeezhick, or the Strong Sky, who wat a very active and successful hunter, and kept his lodge well supplied with food; and we lived happy. After I had had two children, a girl and a boy, we went out, as is the custom of the Indians in the spring, to visit the white settlements. One night, while we were encamped at the head of the portage at Pauwating (the Falls of St. Mary's), angry words passed between my husband and a half Frenchman named Gaultier, who, with bis two cousins, in the course of the dispute, drew their knives and a tomahawk, and stabbed and cut him in four or five places, in his body, head and thighs. This happened the first year that the Americans came to that place (1822). He had gone out at a late hour in the evening, to visit the tent of Gaultier. Having been urged by one of the trader's men to take liquor that evening, and it being already late, 1 desired him not to go, but to defer his visit till next day ; and after he had left the lodge, I felt a sudden presentiment of evil, and I went after him, and re newed my efforts in vaiu. He told me to return, and as I had two chil dren in the lodge, the goungest of whom, a boy, was still io his cradle, and then ill, I sat up with him late, and waited and waited, till a late hour, and then fell asleep from exhaustion. I slept very sound. The firt I knew, was a violent shaking from a gitl, a niece of Gaultier's, who told me my husband and Gaultier were all the time quarrelliog. I arose, and went up the stream to Gaultier's camp fire. It was nearly out, and I tried in vain to make it blaze. I looked into his teot, but all was dark and not a soul there. They had suddeoly fled, although I did not at the moment know the cause. I tried to make a light to find my hushand, hut could find nothing dry, for it had rained very harl the day before. After being out a while my vision became clearer, and turning toward the river side, I saw a dark object lying near the shore, on a grassy opening. I was attracted by something glistening, which tursed out to be his ear-tings. I thought he was asleep, and in atooping to awake him, I slipped and fell on my kaees. I had slipped in his blood on the grass, and putting my hand on his face, found him dead. In the morning the Indinn agent came with soldiers from the fort, to see what had happened, but the murderer and all his bloody gang of relatives had fled. The agent gave orders to have the body buried in the old Indian burial ground, below the Falls.

My aged mother was encamped about a mile off, at this time. I took my two children in the morning, and Gled to her lodge. She had just heard of the murder, and was crying as I entered. I reminded her that it was an act of providence, to which we must submit. She said it wes for me and my poor helpless children that she was crying-that I what left as sho had beeb, years before, with mobody to provide for ua.

With her I returned to my native country at Chegoimegon on Lake Superior.

Thus far, her own narrative. We hope, in a future number, to give further particulars of her varied, and rather eventful life; together with specimens of ber medicine, and prophetic songs.

\section*{RULING CHIEF OF THE MIAMIS.}

Died, od the 13th inst (August, 1841), at his residence on the St. Mery's, four and a half miles south-west of this city, John B. Richarlville, principal chief of the Miami nation of Indians, aged about eighty years.

Chief Richardville, or "Pistewah" (which is on Indian name, meaning in English "wild-cat"), was born on the point across the Maumee river, opposite this city, under or near a large apple tree, on the farm of the late Colonel Coles; and at a very early age, by succession, became the chief of the tribe, his mother being chieftainess at the time of his birth. His situation soon brought him in contact with the whites, and be was in several engagements, the most important of which was the celebrated slaughter on the St. Joseph River, one mile north of this city, designated as "Harmar's Defeat," where several hundred whites, under General Harmar, were cut off in attempting to ford the river, by the \(\ln\) dians, who lay in ambush on the opposite sbore, by firing upon the whites when in the act of crossing; which slaughter crimsoned the river a number of days for several miles below with the blood of the onfortunate victims.
- The Chief is universally spoken of as baving been kind and humane to prisoners-far more so than most of his race; and as soon as peace was restored, became a worthy citizen, and enjoyed the confidence of the whites to the fullest extent. He spoke good French and English, as well as bis native tongue; and for many years bis house, which is pleasantly situated on the banks of the St. Mary's, and which was alwayo open for the reception of friends-was a place of resort for parties of pleasure, who always partook of the hospitality of his house.

The old man was strictiy honest, but remarkably watchful of his interest, and amassed a fortune exceeding probably a million of dollars, consisting of nearly \(\$ 200,000\) in specie on hand, and the balance in the most valuable kind of real estate, whicb he has distrihuted by "will" among bis numerous relations with "even-handed justice." He hed always expressed a great anxiety to live, but when be became conscious that the time of his departure was near at hand, he resigned bimself with perfect composure, saying that it was ordered that all mast die, and be was then ready and willing to answer the call of the "Great Spirit." His resnions were deposited in the Catholic burging-ground with religious ceremonieg,-Fort Wayne (Ind.) Sentivel.

\title{
THE PHILOSOPHER OF ALGOMA,
}

\section*{OR OUTLINEG OF THE TRAVELS AND OPINIONS OF AN}

\section*{INDIAN SACHEM,}

\section*{ON A VISIT TO THE UNITED STATES:}
 DIFTAKT COUNTEYMEH IN THI MORTE,

\section*{PROEM}

Wimanosh, the author of these unique letters, is conceived to be doubly worthy of notice.' He is both original and an aboriginal. He has chosen to communicate his ideas, not like bis countrymen with a peucil of burnt pine, on a scroll of bark, but with veritable pen and ink, on the papyras of modern days, in good Roman characters, using, however, his own language. In truth, of all my gleanings in the forests of the rorth and west, I expect the most cordial thanks for the discovery of these curious bark letters.

All nations have something peculiar to their physical existence which naturalists comprehend under the term of habitat. Doubtless, the things herein narrated would have been differently managed, had they come from the pen of Confucius or Zoroaster. Yet the descriptions and reflections are considered not unworthy of a descendant, if we may suppose bim to be a descendent of the latter. Oriental fancy might have clothed the descriptions in different language. The conclusions of the western philosopher may not have secured as ready an acquiescence on the banks of the Euphrates, the Indus, or Burampooter, as they did on the long-descending Mississippi. Yet, we are not sure that the' drint of thought is not more decidediy tinged with the philosophy of the orientals, than of the occedantals. An Algonquin must needs hold the pen of an Algonquin. There are peculiarities in the Indian man of the weatern continent which mark and distinguish him from his eastern prototype and kingmen, and we must make large allowances for babits and associations which are the result of long eras of separation. Yet, all the proofs of ethnological assimilation are assimilations with the roan of the Eatr. There is absolutely nothing, mental or physical, by which we can trace any analogies to the Saxon, or any other stock of the man of Europe.

Thoomode of yeass of wenderings, by sea and land, have prodaced
mome modifcations of the original type, but they have not obliterated it. We speak not of externals. These change greatly with climate, the mode of subsistence, and other geographical phenomena. It is in the structure and philosopby of the Indian mind, that we bebold the strongeat evidences of original identity. We bail Wawanosh, therefore, as a new adventurer in the world of letters. He has burst, as it were, out of the chrysalis slate of picture-writing into the finished condition of pen and ink, and he expands his new powers, to tell us what he thinks of that state of Sax on civilisation and the arts in which bis countrymen are no participants. We listen to the man of bows and arrows, to hear what he thinks of ships and fortresses, and cities and city arts and elegancies, of which the forest had furnished him no previous examples. We look upon him as we should upon some curious, handsome, two-footed animal foned in remote parts, which had suddenty been endowed with the powers of speech, and we are anxious to bear what he has to say. Curiosity is on tiptoe. It is not reasoning, or precept, or wisdom, or even connected narrative, that we expect. We are enchained by the love of novelty. If it be ooly hass! and boos! from such a source, they will constitute a sort of new bamology or boomology, and it is this, we apprebend, that the public mainly cares for.

Wawanosh has, however, not broken loose from the forests of the north merely to utter his muzita goz \(z i\), that is to say, his neigh, scream, or bellow ; but commends himself to notice in good articulate tones. And when every deduction has been made, candor must allow to our distinguished orcidental traveller and visitor, a lact in observation, a readiness of discrimination, and above all, a faculty of beholding analogies and maling illastrations, and finding out parallelisms between barbaric and civilized society, which, if they sometimes provoke a smile, are entitled, in most cases, to all praise.

There is another trait, in which the mind of the erudite Wawanosh reveals its legitimate workings and characteristics. He never descend to familiarities or puerilities of manner or description, but preserven throughout a conscious dignity. He admita freely, what is noble or praimeworthy in a foreign people; but be, at the same time, so managea his opinions, and the expressions of his admiration, and charitable. outbarsts of feeling, as never to throw disparagement on his own country. His admiration of the institutions of civilisation, letters and reli-1 gion, appears to be the spontaneous effuaion of a noble mind, irrespective' of the state of things at home, and in his own wigwam. He does not come, like nome of the nice and lasty visitors of Europe to this land, whome ancestors have chanced to leave the state of barbarism some centuries before him, and rid themselves of most of its trits, to concentrake hir criticians and philosophy npon the viands of a table, the arrangementa of a atage coach, or the position of amail personal conveni-
ences, uithin or widhout a hotel, to the utter deglect of our actual instituLions, growing wealth and power, population and resources. He sees, in the latter, the true index to our rise, and whatever may be his thoughts on trifing imperfections, or minor details, they are lost in the force of his general estimates. We doubt, indeed, whetber, in this very particular, he does not offer a fair subject of imitation, to the worthy class of refined visitors before mentioned, who have oeen pleased to speak of the United States of America, as a very respectable appendage to the royal family of well ruled and bopeful Claristian nations, very much in the vein, bowever, of Mrs. Hardcaste, who, in speaking the praises of her favorite son, could not pretend to say what "a year's Latin would do for him."

We ought, in all frankness, to make another admission to the credit of the northera philosopher. In copying his letters in the original Iodian tongue from the bark of the betula papyracea, upon which they were written, some inaccuracies may have supervened. And with every advantage of our Camiliarity with the original, with the aid of the ripe knowledge and judgment of other interpretery, we caonot at all times be sure that we have caught the true force of idiomatic expressions Tranapositive languages possess a great advantage in their descriptive powers over our more rigid and inflexible English. Yet, the hope in indulged that the spirit and substance of the observations of this noble son of the Red Race have been, in the main, laithfully rendered.

A single word is to be added by way of precaution. A few of these letters were communicated to a friend, since dead, who published them in 1821, in the New York Statesman. Thence, some of them were transferred to the doric pages of the Koickertocker. It is hoped that the public's approval of this miscellany may enable us now to submit the whole. And so believing, we add, in the original, Kunna ga Kunna.

\section*{No. I.}

Neries" :-More than forty years bave elapsed since my father, who received a gratuitous education at one of the universitiea of New Englend, had returned to his native village, with the stores of knowledge which he had there acquired. I had often listened to him in my childhood while he deacribed the singular manners, customs, lawb, dress, and ustitations of white men-the large buildings in which they residethe tall ships in which they cross the ocean-ithe many fielda which they till ; end all the arts of peace and war, so different from those which previl among the children of the forest. And I felt a burning cariosity to visit those scenes which he had depicted in such glowing colore, and to form my own ertimate of the comparative happinesi of the menge
and civilized state. He had early taught me one of the most valuable arts which he had brought frosi the land of white men,-the curious and perfech mode which they possess of communicating their ideas to one another, by means of certain characters, which are either written or printed; and by the use of which, persons at the greatest distance may indulge in a free, precise, and ready interchange of sentiment. In otber words, be had taught me to read and write. The clements of the latter art have, perhaps, always existed among our tribes, so that by tracing certain figures of beasts, birds, acc., upon slips of bark, our wartiors and hunters bave been able to decypher the meaning, and avail themselves of the information thus communicated. But who could have imagined that there is so vast a difference between the bieroglyphical and the alphabetic method; or that this art, which is now in the same rude state among us that it was a hundred years ago, has been carried to such a wonderful state of perfection by the man of Europe, that every cound of the buman voice, every word uttered, and every thought conceived, can be conveyed in the most precise manner, and by the most appropriate and unerring signs.

> Ewa wrabisk Kownjig
> Tyau! neeb wa Kawin wabish Kizjfig.

Hand-Lalking, or gesticulation, so important with us, is almost wholly unknown among this people, and the tongue is the only organ of intelligence. Everything I bad seen of this people,-everything I had heard of their customs, and the prevalent state of society, only seemed to inflame my curiosity; and years rolled away without diminishing my desire to perform a journey into those countries of which my imaginetion had formed the most exalted notions.
" Father !" I exclaimed one evening as we returned unsuccessful from the chase, "I will go into the land of the white men. I can no longer resist the desire I feel of seeing their towns and cities-their roads and fields-their ships and palaces-their mills and manufactories, and all those useful and elegant arta-those manners and customs-those laws and institutions, which at once proclaim them the wisest, the greateat, and the happiest of men. Erer since you have spoken to me of these things, my thoughts hare wandered far from the land of my nativity. I have sat lonely in the woods, while the deer passed unheeded wibin reach of my rifle. I have sighed to look beyond those blue hills which cast their abful topa into the clouds, and which have heretofore formed the boundary to my moral, as well as physical inquiries. But the charm is broken; you have only allowed me to taste of that fourtain of information for which I feel a burning thirst. The chase bat day after day become less and less attractive to me, till that noble pursuit, which bas always been the proudest aim of our tribe, has dwindled into a dradgery and lost all its chorass. Our precarious mode of life-
oor rude aris-our laws-our employments and amusements, have grown diminutive and humble in my eyes. Put, therefore, oh father, I beseech you, no obstacie in my way. If I had never known that there were otber people, whose modes of thinking and habits of life were so essentially different from our own, I should still have been happy."
"My son," be replied, " happy is the man who is contented with hit lot. Happy is he, whom ambition hath never tempted to quit the endeared scenes of his youth, his home, and his country. Happy is he, who hath never counted the stars, nor analyzed the sun-beams; and who neither sighs for the knowledge which is hid in books, nor the bonors which can be given by meo. Happy is the man whom neither lame nor riches entice to quit the humble shades of sequestered life, for the pomp of power, or the dazzling voice of bumna applause. Thrice happy is he who hath dever dropt a tear in the land of strangers, whose wants are few, and whose only fear is God. I tell thee, oh Wawanosh, that peace dwells not among the splendid of the earth. It is not science that creates happiness-it is not palaces that conveg comfort-it is not ships that can protect us from the rage of the ocean-it is not cultivated Gelds that lead on to human repose, for well thou knowest that the earth has been cursed, and in tears and bitterness shall it only be tilled. Our wants increase with increasing knowiedge ; and the plonghshare that is driven through the tent of the savagc, and the axe that fells the oak that overshadows it, only expose ihe fresh ground to the sum, thal it may produce weeds which never grew there before, and thistles which are sharper than an arrnw. But go, my son, thou hast a wish to see other countries. Thou art young, and ardent, and full of bealth. Experience is the mother of wisdom. It will teach thee how wide the difference is, hetween a splesdid and a bappy people, and that human laws, however wise, may punish, but cannot preyent the commission of crime. It will teach thee tbat the vices increase with the luxuries of a people, and that half the woes, the wars and the quarrels which afflict the humau race, arise from mere diflerences of opinion upon points which are insignificant in themseives. It will also teach thee how few realize in after-life the schemes which they have planned in youth, and how little, atter all, is the real sum of human bliss. Be cautious, and thou wilt escape danger-be temperate, and thou wilt not be troubled with disease-be virtuous, and thou mayest hope to be happy."

So saying, he bung around my neck a string of wampum; be put into my hand a rifle of curious workmanship; a packet of pepers designed to recommend me to the sequaintance of bis former collegiate friends, and he ordered a slave, whom he had captured in war, to put into my canoe three hundred beaver skins of the blackest dye, begides a cboice pack of the silver and cross for, and two others of melected otters and martins. Thus prepared, I embarked upon the Lake
of the Hillo-1 passed rapidly through those walers which canduot the traveller into the Lake of the Woods, and the Rainy lakes. I urged my way, with little difficulty, through a chain of connected waters, filled with immense fields of wild rice, or sometimes choked with the pointed bulrush. My canoe was then transparled by the slaves who accompanied me, over the higblands that separate the waters of the aretic circle, from those which flow into temperate latitudes. I passed the stormy shores of Lake Superior, after pausing upon the waves, to admire the atriking scenes of picturesque beauty and magaificence, which mark these rocky and rumantic coasts. I guided my cance down the foaming rapida of St. Mary-I visited the inland of Michilimackinac, that ancient seat of the fur trade, and passed along the sandy shorea of Lake Huron, and through the beautiful river of St. Clair. After a journey of three moons, during which my canoe had twise been dashed upon the rocks, and I had encountered many perils by storms, hy hunger, and by fatigue, I reached the city of Detroit in safety.

Thus far I have detailed to you my journey, which I ranamit by my friend Geonida, who, already aick of the land of white men, cannot be prevailed upon to accompany me farther, and takes the opportunity of a trading canoe to return to his friends. I shall soon resume my narntive, and the remarks which have occurred to me, tpon the manners and customs of this extraordinary people. Ever thine,

WAWAKO日R.

No. II.
Detrotr.
Neres:-At every point of my journey where I had encountered white men, new ideas bad been created by seeing the spacious buildings, the gingular costume, and the more singular physiognomies of this uniform people. But nothing struck me with more force than the garrulity which I everywhere observed, even between people who woald not seem to belong to the highest onder of society, or to have nuch of importance to communicate to each other; and I frequently said to mysolf, this is aurely a talking people. O spirit of the great Altelago, chief of apeakers, wouldst thou believe it, that there are more worls passed here, on the occasion of selling an awl-blade of the value of three cents, then were uttered in the great council, when our tribes went to war against the Ticaunees! If, however, I expressed my astonishment at what I saw in the defached settlements of white men whom I encountered in my voyage through the upper lakes, judge what it must be on meeing a city boilt of brick and wood, towering into the clouds, and essaming
every fantartic shape which the genius of architecture can invent-a city surrounded in part by tall sbips and military works-its streets filled with men hurrying to and fro-with borses and carriages literally hid in the clouds of dust raised hy their own motion-and its sides walled up with shops stored with the different products of all parta of the world.

So many new objects crowded upon may notice, that it was a long time before I could think with precision, on any subject, or form an adequate idea of the people before me. I felt like a man, who suddenly starting from a dream, finds himself, as if by enchantment, at the foot of a tremendous cataract, where pothing can be heard for the appalling thunder of the waters, and no object distinctly seen for the clouds of glittering apray. For a moment, I shrualk within myself, and cast "one loug lingering look" townds the peaceful haunts of my nativity. Ba; soon this mental trepidation and obscurity began to pass away, and I saw that all is not dangerous that is noisy, and that every sparkling stone is not a gem. As I passed through the various shades of society which this frontier presents, I observed that the wants of man increase in the exact degree that he has proceeded beyond the simple comforts, and ingenuous manners, of the sons of the foreal. And that if an agricultural state and a code of written laws, procured him many enjoyments and many securities, which are unknown to the hunter, they also brought with them accumulated ills, and wants, and perphexities, which are equally unknown to the hunter state. But I could nol contain my admiration for the mechanic arts, which are so completely subservient to the manifold necessities and comforts and elegancies of life. I saw the stone-hatchet, that antique instrument so long in use by our forefathers, exchanged for the ponderous iron axe, by which the largest trees can he felled in a few moments. I saw the tent of bark, exchanged for large and aquare buildings, fabricated out of entire trees, sawed, and smoothed, and painted; and what is very remarkable, many of these buildings are several stories in height, and contsin a number of rooms which are upoccupied, and do not appear necessary to any purpose of the domestic economy. Are these, as with us, appropriated for the residence of their monetoes, or to the ceremonies necessary for the cure of the sick? I saw the simple canoe of bark, exchanged for large and heavy ships, bearing immenso sheets of canvass, which it requires several men to hoist. I saw men dragged through the streets upon four wheels, upor which a corions piece of mechanism was fixed, and hefore it several horses were attached by means of leather thongs, oraamented with plates and buckles of gold and ailver. Strange people, I exclaimed, that they should thus tamely aubmit to be transported through the streets like masses of stone or wood, without having the properties of these bodies, to resist every jostle and bruise atising from inequalities in the surface. They might wall with much more convenience to themselves, and at the same time spare the
fesh of their borses. Surely, I thought, this must be a lazy people, and all the accounts which we bave heard of their industry unfounded. And I saw many other things that were new to me, and many that I cannot as yet comprehend; but every moment convinces me, that however great, and powerful, and wise, this cannot be a happy people. Society, here, is a helerogeneous mixture of all that can ennoble or degrade the human species-of all that can charm or diggust. The mind is at one moment carried into heaven in their dreams of philosophy and tenets of religion, or depressed to the abodes of eteral misery in their toleration of vice, or their traits of depravity. Such a singular mixture of good and evil, of wisdom and folly, of splendor and misery, of joy and sorrow, ns does not perhaps exist in any other state of society under the sun. Bat I must see more of this people, before I can pronounce upon their comparative happiness.

When I first quitted my native forest in Rupertsland, I had supposed the American people a nation of philosophers. Their garrulity soon led me to pronounce them a nation of talkers-their ships and commerce, a nation of merchants-their houses, implements, and dachines, a nation of mechanics-their gilt works, plated harness, and baukles, a nation of spendthrifts. In their stores, filled with spices and intoxicating liquors from all parts of the globe, I saw luxury and all her attendant train of disease, poverly, misery, and death. In their dress,-I naw pride and extravagance. In their manners and conversation, frivolity and trifling. In their conduct towards their dependents and inferiors, harshness and overbearing. In their opinions of their neighbors, uncharitableness. In their politeness, insincerity; in their gravity, malice; in their admiration, cupidity; and in all their cbaritable and literary contributions, illiberality. But I am convinced that aeither of these traits is peculiarly appropriate, and the more I see of them, the more fully am I inclined to the opinion that the Americans are a people of inconsistencies. O spirit of the great Algoliro! is it credible, that the same people who build castles and palaces that rise into the cloude, who erect ships which brave the dangers of the ocean, and whose heary artillery is only exceeded by the thunders of the Great Spirit, should yet retain the savage custom of sewing strips of red cloth upon the germents of their wartiors and war chicfs, decking their hats with horsehair and feathers, and removing their trinkets from their noses and ankles, only that they might dangle in more prodigious quantities from the froat pockets of their pantaloons? O spirit of Inconsistencies! this is surely thy bome. Ever thine,

\section*{OF THE}

\section*{LATE JOHN JOHNSTON, ESQ.}
[COntinued fhom pher 305, part r.]
In 1804 his mother, who was a M'Neil, died at the family residence at Craige, in Antrim, an event which brought him into possession of the estate, and put an end to the design she hed formed of taking his eldest daughter, Jane, to be brought up under ber care. His eldest sister, Mrs. Moore, consort of John Moore, Esq., of the Royal Nary, Wexford, being without children, now solicited to be allowed to fulfil her mother'a intentions, and heing joined by Mr. Moore in the request, Mr. Johnston yielded bis assent. As the situation of the Irish property now required his attention, he determined to take his daughter with him in the contemplated visit ; and accompanied by her he embarked at Quebec in the autumn of 1809 . Afler a tedious and tempestuous passage, owing to the advanced state of the season, he landed at Cork, late in the antumn. He proceeded by land to visit his friends in Dublin, and afterwards in Wexford, where he left his daughter, whose bealth bed suffered aeverely on the passage and since their landing. 'He then continued his journey to the North of Ireland. His visit occupied the remeinder of that, and part of the following year.

On his return to America, he visited London. The particular object of this visit is not known to me, but is believed to have arisen in part from a correspondence with cerlain members of the North West or Hudson's Bay Companies. It had also been his wish, on going to England, to provide for the entry of bis sons, Lewis and George, into the Army and Navy, to effect which he counted upon the influence of the Marquis of Hereford, and Sir Edmuad M'Naughton, the latter of whom was a friend and kinsman. One of the first incidents after bis arrival in the city was the loss of his pocketbook, containing letters of introduction, having been picked in a crowd near the Exchange.

During his stay in the metropolis he received from Lord Selkirt the offer of the Govemorship of Hudson's Bay with suitable appointmentsan offer which, after mature deliberstion and several conferences with his Lordship, he prudently, as it is thought, declined. Among the reason which had weight with him, was the remoteness and unsettled slate of the territory, which offered no advantage for the education of his child-
ren, now becone numerous, and the consequent anpleasantness of the removal to their feelings. It is since known that Mr. Sernple, who accepted the post, was shot on the plains of Red River, in a rencontre with a party of Bois Brules and Indians, who had set his authority at defingce, and be was actually tomahawked and scalped by the Indiana, who, as well as their Cbristian associates, were suppoeed to have been instigated to this atrocions act by the partners of the North West Company. Mr. Johnston, who, from his experience in the country, had confidently predicted this state of things to the Directors in London, was not disappointed in the result.

While in London he made acquaintance with a Mr. Black-a gentleman in some way connected with the British Bible and Foreiga Mianionary Society, in consequence of which a box of Bibles, and a mizsionary to labor in the conversion of the Indians, were sent to Canada. The missionary having probably formed no definite idea of the true state of mettements in that quarter, and the privations to be encountered, declined proceeding to the territories of the Chippewas, where it was designed be sbould bave commenced his labors ; and left an inference to be drawn, that his zeal in this object needed stronger excitements. In a Poetical "Petition to the Ojibwa nation of the North American Indians, to the London Society for Miseions," which was addressed to Mr. Black, and published among the missionary papers, be shows the claims of the Red Race on the civilized world, and it may be referred to as denotiog bis opinion of the radical defects of the Jesuit missions in Canada.

Before quitting the British metropolis, an opportunity was opened of his being presented to the king, along with several other gentlemen who were waiting for the purpose-an honor which he had the firmness to deeline. For it must be allowed that firmness was required, when we reflect that be was an ardent admirer of the king and constitution, and deemed the honor of an introduction one of the mast flattering kind. Bat it is probable that, in bis actual position, as a residant of a remote part of a remote province, he saw less advantage to be derived from it, than would have attended a persoo differently placed. And he said himself, that it wonld probably have increased his vanity and pride, which be found it a sufficient task to restrain, without exitra excitement.

On the route from London to Liverpool, his travelling deak, containing money, jevelry, and papers, was atolen from the carriage. He emberked at Liverpool near the middje of Jane, but the delays atlendigg a pessage acrose the Atlenic, before the present improved facilities were introduced, consumed the rummer, and a long inland voyage, in which the mode of conveyance is often shifted, made it very late in November before he reached St. Mary's. Here he had canse, as he remarked, to feliaitate himsalf on the enjoyment of domestic quiet, and a peacefol
seclustod, 60 different from the pomp and splendor, which his recent vieit eerved to remind him prevailed in the polished circles of his mative land, and atwong several of his friends and relatives, whom he had foond greatly adranced in wealth and place. And from this period he appears to have relinquished all idea of a permanent return to Ireland.

It had been proposed to him while in Dublin at the table of his cousin, the Right Honorable William Saurin, Attorney General of Ireland, that his friends should unile their influence in making provision for his retard, and the advantages of a permapent place and adequate salary were atrenuously urged. But the proposal was finally met, on his part, by the insuperable objection, that he could not sbandon his wife in America, by whom he had several children, and to whom he was tenderly attached, and that it wes equally impossible to introduce her into a state of society which was so different from all she had before known, that she could not fail to be insupporiably unhappy. His strong attachment to his wife and children, formed indeed a striking trait of his character. And to their happiness he now devoted bimself with unceasing care.

He placed his eldest sons Lewis and George at Montreal, as soon as they became of proper age, with the advanlage of attending the beat achool the place afforded, where they were taught the common branchea of an English education and the French language. They had joined the family at St. Mary's before his late visit, and the family being now once more embodied, be found himself surrounded by an interesting group of children, whose bealth and education had formed one of his most pleasing cares during their infancy, and whose welfare and ateadfast adherence to principles of virtue, honor and piety, formed the subject of his most anxious solicitude, now that the elder of them began to verge on maturity. It should not be omitted, that in addition to his own children, he had adopted in infancy, Miss Nancy Campbell, the deaghter of a friend and countryman, who fell in a duel near St. Joseph's, in which he had attended him to the field, and she was brought up and treated in every respect, with the care and tenderness of one of his own children.

He had early imbued the minds of his own family with the leading principles of the Christian religion, as explained and enforced in the church service, and wac constant and zealous in the observance of its forms, accompanying morning and evening prayer with a portion of the Psalms, and a sermon (most commonly of Blair, Sanrin, or Chalmers), on the Sabbath. He read impressively, and generally glosed the service with some extemporaneous practical remarks. He ardently felt himeelf, and he had habitually taught every member of his family, to look to God, through the merits of the Saviour, as the giver of every enjoyment and the sole object of rationsl supplication. If any sigral saccess attended his hasinesa, or household, he made it the occasion of special ackoonledgment, and was equally attentive to refer to its true source, and to
admit with most hearfelt conviction, the justice of losses and affictions. Life and death, riches end poverty, honor and disgrace, were, in hia miod, the ready gifts of a superintending Deity, who could never en, either in giving or withholding. And though the distribution was often contrary to the awards of human reason, he did not the less doubt that it wes inost just, and fully comformable to the dictates of a Higher Intelligence. Feeling thus, and living in a full reliance upon scripture promi-ses-upon which he meditated deeply and spoke often, be was soon reconciled to the untoward occurrences of life, though from the seasitiveness of his mind, and initability of his temperament, few persons experienced more acute pain on the first intelligence of misfortune or disappointment. He had formed a most noble and ennobling conception of the sublime character and attributes of God, as being most immaculute and irteproachable. And he considered the irreverent use of his name, as being not only a gross want of piety, but altogether incompatible with the character of a gentleman.
- I have before spoken of his active benevolence, the ready access which a plea of misfortune gained to his heart, and the forgiving nature of his disposition. Punctilious in exacting the respect due to himself, and sensitive to the point of honor, he was equally ready to extend the hand of friendship and reconciliation, and could never rest under the impression that he had been the firgt to provoke offence, or inflict injury. If he was disposed to entertain settled antipathy to any class of the human family, it was to sceptics in religion, whom he could neither spare in their perrons, or their works. He looked with abhorrence upon such writers as Paine, and could not bring himself to think that the genius or talents of Gibbon and Hume formed any adequate counterpolse to their want of faith in the Gospel of Christ.

\section*{(Tobe conlinued)}

Indolencr.-The Indian disappears before the white man, nimply because be will not work. The atruggle (in their history) was, between inveterate indolence and the most active and enengetic industry, and the result could not be doubfful.

Gallatia.
Mental Cafacity.-They have exhibited repeated proof of intellectual powers apparently very superior to those of the African, and not very inferior to those of the European race.
\(1 b\).
Father Le Jeane says that it is admitted on all hands, that they were superior in intellect to the Frencb peasantry of that time.

Ib.

\section*{ETHNOLOGY.}

Apallachians; a nation of Indians who formerly inhabited the extreme sontbern portion of the United States, and have left their name in the leading range of the Apallachian mountains. In 1539 De Soto found them in Florida, a term at that era comprehending also the eatire area of the present states of Alabama, Mississippi, Louisiana, and other portions of the southern territory. They were numerous, fierce, and valorous. They were clothed in the skins of wild beasts. They used bows and arrows, clubs and spears. They did not, as many nations of barharians do, poison their darts. They were temperate, drinking only water. They did not make wars on slight pretences, or for ayarice, but to repress atlacks, or remedy injustice. They treated their prisoners with humanity, and like other persons of their households. They were long lived, some persons reaching a hundred years. They worshipped the sun, to which they sang hymns, morning and eveniug. These facts are to be gleaned from the narrative. What were their numbers, how far they extended their jurisdiction, what were their affiliations by language, costoms, and institutions with other tribes, cannot be accurately decided. Much that is said of their civil and military polity, buildings, ceremonies and other traits, applies to the Floridian Indians generally, and may be dismissed as either vague, or not characteristic of the Appalachians. A quarto volume was published in London in 1666, by John Davies, under the Lite of a "History of the Caribby Indians," in which he traces the caribs of the northern groups of the West Indies, to the Apallachians, and relates many incidents, and narrates a series of surprising wars and battles, reaching, in their effects, through the Mississippi valley up to the great lakes, which have the appearance of fable. How much of this account, which speaks of "cattle" and "herds," may be grafted on ancient traditions, it is impossible to tell. There are some proofs of such an ancient civilisation in the Ohio valley and other sections of the country, but they are unconnected with any Indian traditions, which have survived, unless we coasider the mounds and remains of antique forte es monumental evidences of these reputed wars. The Lenapee accounts of these ancient wars with the Tallagees or Allegewy, may be thought to refer to this ancient people, who had, if this conjecture be correct, extended their domiaion to the middle and northern latitudes of the present arca of the United States, prior to the appearance of the Algonquin and Iroquies races. Mr. Irving has suggested the namc of Apallachia, or Allegenia, derived from the stock, for this division of the continent.

\begin{abstract}
 GIONS OF ONF OF THEIE PROPHETS；THEINLANGUAGEX，AND GHAYACTEE OF THE TRANSLATIONB OF THE GOSPKG MADE INTOTNSSEDIAZECTS；AKD THE LEAB－

\end{abstract}

Ir is known that the Indien tribes of this continent live in a state of mental bondage to a clase of men，who officiate as their priests and soothsayers．These men found their clains to supernatural power on early fastiogs，dreams，ascetic manners and habits，and often on some real or feigued fit of insanity．Most of them affect a mowledge of charms and incantations．They are provided with a sack of myatic im－ plements，the contents of which are exhibited in the course of their cere－ monies，such as the hollow bones of some of the larger anseres，small carved representations of abimals，cowrie and other sea－shells，\＆c．Some of these men acquire a character for much sanclity，and tum their infla－ ence to political purposes，either personally or through some populer warrior，as was instanced in the success of the sachems Buchanjahein， Little Turtle and Tecunthè．

We have recently had an opportunity of conversing with one of this class of sacred person，who has within late years embraced Cbristianity； and have made some notes of the interview，which we will advert to for the purpose of exbibiting his testimony，as to the rue character of thin

\footnotetext{

}
class of impostors. Chusco, the person referred to, is an Ottawa Indine who has long exercised the priestly office, so to say, to bis brethren on the northem frontiers. He is now a man turned of seventy. He is of small stature, somewhat bent forward, and supports the infirmities \(\propto\) age by walking with a staf. His sight is impaired, but his memory accurate, enabling him to narrate with particularity events which trangpired zoore than half a century ago. He was present at the great convocation of northerc Indians at Greenville, which followed Gen. Wayne's victoriea in the west-an event to which most of these tribes look back, as an era in their history. He afterwards returned to his native country in the upper lakes, and fixed bis residence at Michilimackinac, where in late years, his wife became a convert to the Christian faith, and united berself to the mission church on that island. A few years after, the old prophet, who despised this mode of faith, and thought but litulo of bis wife's sagacity in uniting herself to a congregation of believers, felt his own mind arrested by the same truths, and finally also embraced them, and was propounded for admission, and afterwards kept on trinl before the session. It was about this time, or soon after be had been received as an applicant for membership, that the writer visited his lodge, and entered into a full examination of his sentiments and opinions, contrasting them freely with what they had formerly been. We requested him to narrate to us the facts of his conversion to the principles of Cbrixtianity, indicatiog the progress of truth on his mind, which he did in subatance, through an interpreter, as follews:
"In the early part of my life I lived very wickedly, following the Meta, the Jersokan, and the Wabeno, the three great superstitions observances of my people. I did not know that these societies were made up of errors until my wife, whose beart bed been turned by the missionaries, informed me of it. I had no pleasure in listening to her on this subject, and often turned away, declaring that I was well satisfied with the religion of my forefathers. She took every occasion of talking to me on the subject. She told me that the Indian societies were bad, and that all who arhered to them were no better than open servants of the Evil Spirit. She had, in particular, four long talks with me on the subjeet, and explained to me who God was, and what sin was, as it is written in God's book. I believed before, that there was One Great Spirit who was the Master of life, whohad made men and beasts. But she explained to me the true character of this Great Spirit, the sinfulness of the heart, and the necessity of baving it changed from evil to good by praying through Jesus Christ. By degrees I came to understand in She told me that the Ghost of Good or Holy Spirit only could make the heart hetter, and that the souls of all who died, without having felt this power, would be hurned in the fires. The missionaries had directed ber to apeak to me and put words in her mouth; and she said so much thyt.
at length, I did not feel satisfied with my old way of life. Amongat other chings she spoke against drinking, which I was very fond of.
"I did not relish these conversations, but I could not forget them When I reflected upon them, my heart was not as fixed as it used to be. I began to see that the Indian Societies were bad, for I knew from my own experience, that it was not n good Spirit that I had relied upon. I determined that I would notundertake to jeesuka or to look into futurity any longer for the Indians, nor practice the Meta's art. After a while I began to see more fully that the Indian ceremonies were all bad, and I determined to quit them alrogether, and give heed to what was declared in God's book.
"The first time that I felt I was to be condemned as a sinner, and that I was in danger of being punished for sin by God, is clearly in my mind. I was then on the Island of Bois Blanc, making sugar with my wife. I was in a conflict of mind, and hardly knew what I was about. I walked arouud the kettles, and did not know what I walked for. I felt sometimes like a person wishing to cry, but I thought it would be unmanly to cry. For the space of two weeks, I felt in this alarmed and unhappy mood. It seemed to me sometimes as if I must die. My heart and my bones felt as if they would burst and fall asuoder. My wife astred me if I was sick, and said I looked pale. I was in an agooy of body and mind, especially during one week. It seemed, during this lime, as if an evil spirit hanted me. When I went out to gather sap, I felt conscious that this spirit went with me and dogged me. It appeared to animate my own shadow.
" My strength was failing under this conflict. One night, afler I had been husy all day, my mind was in great distress. This shadowy influence seemed to me to persuade me to go to sleep. I was tired, and I wished reat, but I could not sleep. I began to pray. I knelt down and prayed to God. I continued to pray at intervals through the night; I asked to know the truth. I then laid down and went to sleep. This sleep brought me rest and peace. In the moraing my wife awoke me, telling me it was late. When I awoke I felt placid and easy in mind. My distreas had left me. I asked my wife what day it was. She told me it was the Sabbath (in the Indian, prayer-day). I replied, \({ }^{\text {s }}\) how I wish I could go to the church at the mission ! Fornerly I used to avoid it, and shunned those who wished to speak to me of praying to Gad, but now my heart longs to go there.' This fecling did not leave me.
"After three days I went to the mission. The gladness of my beart continued the same as I had felt it the first morning at the camp. My firat feeling when I landed, was pity for my drunken brethren, and I prayed that they might also be brought to find the true God. I apoke to the missionary, who at subsequent interviews explained to me the trath, the rite of baptism, and other priaciples. He wished, however, to
try me by my life, and I wished it also. It wes tho following antumn, that I was received into the church."

We now tamed his mind to the suhject of intemperance in drinking, understanding that it had been his former habit. He replied that he had been one of the greatest drunkards. He had not been eatisfied with a ten days' drink. He would go and drink as long as he could get it He said, that during the night in which he first prayed, it was one of the first subjects of his prayers, that God would remove this desire with his other evil desires. He added, "God did so." When he arose that morning the desire had left him. The evil spir then tempted him hy suggesting to his mind-" Should some one now enter and offer you liquor, would you not laste it "" He averred he could, at that moment, fimply answer No!" It was now seven years since he had tasted a drop of atrong drink. He remarked that when he used first to visit the houses of Christians, who gladly opened their doors to him, they were in the habit of asking him to drink a glass of cider or wine, which he did. But this practice had nearly ruined him. On one occasion he felt the effects of what he had thus been prevailed on to drink. The danger he felt himself to be in was such, that he was alomed and gave up this practice also.

He detailed some providential trials which he had been recently exposed to. He had observed, he said, that those of bis people who had professed piety and had subsequently fallen off, had nevertheless prospered in worldly things, while be bad found it very hard to live. Ho was often in a slate of want, and his lodge was so poor and bad, that it would not keep out the rain. Both he and his wife were feeble, and their clothes were worn out. They had now but a single blanket between them. But when these trials came up in his mind, be immediately resorted to God, who satisfied him.

Another trait in the cbaracter of his piety, may here be mentioned. The sutumn succeeding his conversion, he went over to the apot on the island where he had planted potatoes. The Indian meibod is, not to visit their small plantations from the time that their corn or potatoes are hilled. He was pleased to fand that the crop in this instance promised to yield abundantly, and his wife immediately commenced the process of raising them. "Stop !" exclaimed the grateful old man," dare you dig these potatoes until we have thanked the Lord for them?" They then botb knelt in prayer, and afterwards gathered the crop.

Thia individual appeared to form n tangible point in the intellectusl chain between Paganism and Christianity, which it is felt important to examine. We felt desirous of drawing from him such particulars respecting his former practice in necromancy and the prophetic art, as might le \({ }^{\text {and }}\) to correct philosophical conclusions. He bad been the great juggler of hia tribe. He was now accepled as a Christian. What were his ofn
conceptions of the power and arts he had practised? How did theme things appr to his mind, after a lapse of several years, during which his opinions and feelings had andergone changes, in many respecte so striking? We found not the slightest avoiding of this topic on his part. He attributed all bis ability in deceptive arts to the agency of the Evil Spirit ; and he spoke of it with the same settled tone that he had manifested in reciting other points in his personal experience. He believed that he had followed a spirit whose object it was to deceive the Indians and make them miserable. . He helieved that this spirit had left him and that he was now following, in the affections of his heart, the spirit of Truth.

Numerous symbols of the classes of the amimate creation are relied on hy the Indian metays and wabenos, to exhibit their affected power of working miracles and to scrutinize the scenes of futurity. The objects which this man had appealed to as personal spirits in the arcanum of his lodge, were the tortoise, the swan, the woodpecker and the crow. He had dreamed of these at his initial fast in his youth, during the period set apart for this purpose, and he helieved that a satanic influence was exerted, hy presenting to his mind one or more of these solemnly appropriated ohjects at the moment of his invoking them. This is the theory drawn from his replies. We solicited him to detail the modus operandi, after entering the juggler's lodge. This lodge resembles an acute pyramid with the apex open. It is formed of poles, covered with tightdrawn skins. His replies were perfectly ingerous, evincing nothing of the natural taciturnity and shyness of the Indian mind. The great object with the operator is to agitate this lodge, and cause it to move and shake without uprooting it from ils busis, in such a manner as to induce the spectators to believe that the power of action is supertuman. After this manifestation of spiritual presence, the priest within is prepared to give oracular responses. The only articies within were a drum and rattle. In reply to our inquiry as to the mode of procedure, he stated that his firat essay, after entering the lodge, was to strike the drum and commence his incantations. At this time his personal manitos assumed their agency, and received, it is to be inferred, a satanic energy. Not that he affects that there was any visible form assumed. Bat he felt their spirit-like presence. He represents the agitation of the lodge to : he due to currents of air, having the irregular and gyratory power of a whirlwind. He does not preteod that his responses were guided by trath, but on the contrary affirms that they were given under the influence of the evil spirit.

We interrogated him as to the use of physical and mechanical means in effecting cures, in the capacity of a meta, or a medicine man. He referred to various medicines, some of which he thinks were antibilious or otherwise sanatory. He used two bones in the exhihition of his
physical skill, one of which was white and the other green. His artunum also embraced two small stone images. He affected to look ineo and through the fesh, and to draw from the body fluids, as bile and blood. He applied his mouth in auction. He characlerized both the meta or medicine dancea and the wabeno dances by a term which may be translated deviltry. Yet he discriminated between these two popular institutions by addiag that the meta included the use of medicines, good and bad. The wabeno, on the contrary, consisted wholly in a wild exhibition of mere braggadocio and trick. It is not, according to him, an ancient institution. It originated, he said, with a Pottawattomie, who way sick and lunatic a month When this man recovered he pretended that he had ascended to beaven, and had brought thence divine arts, to aid his countrymen.

With reapect to the opinion steadfastly maintained by this venerable subject of Indian reformation, that his deceptive arts were rendered effectual in the way he designed, by satanic agency, we leave the reader to form his own conclusions. In his mode of stating the facts, we concede much to him, on the acore of long established mental habits, and the peculiarities arising from a mythology, exceeding even that of ancient Greece, for the number, variety and ubiquity of its objects. But we perceive nothing, on Christian theories, heterodox in the general position. When the truth of the gospel comes to be grafted into the benighted heart of a pagan, such as Chusco was, it throws a fearful light on the objects which have been cherished there. The whole system of the mythological agency of hrie gods and spirits of the heathen world and its clumsy machinery is shown to be a sheer system of demonology, referable, in its operative effects on the minds of iddividuals, to the " Prince of the power of the air." As such the Bible depicts it. We bave not been in the hahit of conceding the existence of demoniscal possessions, in the present era of Christianity, and have turned over some scores of chapters and versea to eatisfy our minds of the abragation of these thinga. But we have found no proofs of such a withdrawal of evil agency short of the very point where our subject places it-that is, the dawning of the light of Cbristianity in the beart. We have, on the contrary, found in the passages referred to, the declaration of the full and free existence of such an agency in the general import, and apprehend that it cannot bo plucked out of the sacred writings.

The language of such an agency appears to be fully developed annong the northern tribes. Spirit-ridden they certainly are; and the mental slavery in which they live, under the fear of an invisible agency of evil spirits, is, we apprehend, greater even than the bondage of the body. The whole mind is bowed down under these intellectual fetters which circumacribe its volitions, and bind it as effectually as with the hooks of steel which pierce a whirling Hindoo's flesh. Whatever is wonderfal,
or past comprehension to their minds, is referred to the agency of a spirit. This is the ready solution of every mystery in nature, and of every refinement of mechanical power in art. A watch is, in the intricacy of its machinery, a spirit. A piece of blue cloth-cast and blistered steel-a compass, a jewel, an insect, \&c., are, respectively, a spirit. Thunder consists, in their transcendental astronomy, of oo many distinct spirits. The aurora borealis is a body of dabcing spirits, or rather ghosts of the teparted.

Soch were the ideas and experiences of Chusco, after his union with the church; and with these views he lived and died, having given evidence, as was thought, of the reception of the Saviour, through faith.
To give some idea of the Indian mythology as above denoted, it is necessary to conceive every department of the universe to be filled with invisible spirits. These spirits hold in their belief nearly the same relation to matter that the soul does to the body: they pervade it. They believe not ooly that every man, hut also that every animal, hat a soul; and as might be expected under this belief, they make no distinction between instinct and reasom. Every animal is supposed to be endowed with a reasoning faculty. The movermenta of birds and other animala are deemed to be the result, not of mere instinctive animal powera implanted and limited by the creation, without inherent power to erceed or endage them, but of a process of ratiocination. They go a step farther, and believe that acimals, particularly birds, can look into, and are familiar with the vast operations of the world above. Hence the great reupect they pay to birds as agents of omen, and also to some animals, whose souls they expect to encounter in another life. Nay, it is the settled helief among the northern Algonquins, that animals will fare better in another world, in the precise ratio that their lives and enjoymeote have been curtailed in this life.

Dreams are considered by them as a means of direct communication with the spiritual world ; and hence the great infuence which dreams exert over the Indian mind and conduct. They are generally regarded as friendly warnings of their personal manitos. No labor or enterprise is undertaken ageinst their indications. A whole anny is turned back if the dreams of the officiating priest are unfavorable. A family lodgo has been known to be deserted by all its inmates at midaight, leaving the fixtores behind, because one of the family had dreamt of an attack, and been frightened with the impression of blood and tomahawks. To give core aolemnity to his office the priest or leading meta exhibits a sack containing the carved or stuffed images of animais, with medicipea and bones constituting the sacred charms. These are never exhibited to the common gaze, hut, on a march, the asck is hung up in plain view. To profane the medicine sack would be equiralent to violating the atir.

Dreams are carefolly sought by every Indian, whatever be their nuld, at certain periods of youth, with fasting. These fasts are sompetimon continued a great number of days, until the devotee becomes pale and emaciated. The animals that appear propitiously to the mind doring these dreams, are fixed on and selected as personal manitos, and are ever after piewed as guardians. This period of fasting and dreato ing is deemed as essential by them as any religious rite whatever entployed by Christians. The initial fast of a young man or girl holda the relative importance of baptiam, with this peculiarity, that it is a freewill, or self-dedicatory rite.
The paming of children has an intimate connection with the system of mythological agency. Names are usually bestowed by some aged parson, most commonly under the supposed guidance of a particular spirit They are often derived from the unstic scenes presented in a dream, and refer to aerial phenomena. Yellow Thunder, Bright Sky, Hig Cloud, Spinit Sky, Spot in the Sky, are common names for males. Females are more commonly named from the vernal or sutumnal landscape, as Woman of the Valley, Woman of the Rock, \&c. Females are not excluded from parLicipation in the prophetical office or jugglership. Instances of their having assumed this function are known to have occurred, although it is commonly confined to males. In every other department of life they are apparently regarded as inferior or inclusive beingy. Names beatowed with ceremony in childhood are deemed sacred, and are seldom pronounced, out of respect, it would seem, to the spirit under whose fivor they arc suppased to bave been selected. Children are usually called in the family by \(\begin{aligned} & \text { ome name which can be familiarly used. A male child }\end{aligned}\) is frequently called by the mother, a bird, or young one, or old man, as terms of endearment, or bad boy, evil-doer, \&c., in the way of light reproach; and these names often adhere to the individual through life. Parents avoid the true name often by saying ny son, my yoanger, or my elder son, or my younger or uny elder daughter, for which the langrage has separate words. This subject of a reluctance to tell their names is very curious and deserving of investigation.

The Indian "art and mystery" of hunting is a tissue of necromantic or mythological reliances. The personal spirits of the hunter are inveked to give success in the chace. Imeges of the animals sought for are sometimes carved in wood, or drawn by the metas on tabular pieces of rood. By applying their mystic medicines to these; the animaln are supposed to be drawn into the hunter's path ; and when animals have been cilled, the Indian feels, that although they are an authorized and lawful prey, yet there is something like accountahility to the avimis suppositional soul. An lodian has been known to ask the pardon of an animal, which he bad just killed. Drumening, shaking the rattlo, and draeing and einging, are the common accompaniments of all these aupar-
stitious observances, and are not pecaliar to one class alona. Ie the wabeno dance, which is esteemed by the Indians as the most latitudinsrian co-fraternity, love songs are introduced. They are never heard in the medicine dances. They would subject one to utter contempt in tho war dance.
The system of maniso worship has another peculiarity, which is illuetrative of Indian character. During the fasts and ceremonial dances by which a warrior prepares himself to come up to the duties of war, everything that eavors of effeminacy is put aside. The spirits which preside over bravery and war are alone relied on, and these are supposed to be offended by the votary's paying attention to objecta leas stern and manly than themselves. Venus and Mars cannot be worshipped at the same time. It would be considered a complete desecration for a warrior, while engaged in war, to entaggle himself by another, or more tender sentiment. We think this opinion should be duly estimated in the general award which history gives to the chastity of warrions. We would record the fact to their praise, as fully as it has been done; but we would subtract sornething from the motive, in view of his paramount obligations of a sacred character, and also the fear of the ridicule of his co-warriors.

In these leading doctrines of an oral and mystic school of wild philosophy may be perceived the ground-work of their mythology, and the general motive for selecting familiar spirits. Manito, or as the Chippewas pronounce it, monedo, signifies simply a spirit, and there is neither a goos nor bad meaning attached to it, when not under the government of some adjective or qualifying particle. We think, however, that so far as there is a meaning distinct from an invisible existence, the tendency is to a bad meaning. A bad meaning is, however, distinctly conveyed by the inflection, osh or ish. The particle ceee, added in the same relation, indicates a witch. Like numerous other nouns, it bas its diminutive in os, its plural in woug, and its local form in ing. To add "great," as the Jesuit writers did, is far from deciding the moral character of the apirit, and bence modern translators prefix gezha, sigoifying merciful. Yet we doubt whether the word God should not be carried boldly into translations of the gcriptures. In the conference and prayer-room, the native teachers use the inclusive pronominal form of Father, altogether. Truth breaks slowly on the mind, suak in so profound a darkness as the Indians are, and there is danger in retaining the use of words like those which they have so long employed in a problematical, if not a derogetive sense.

The love for mystery and magic which pervades the native ceremonies, has affected the forms of their language. They have given it a power to impart life to dead masses. Vitality in their forms of utterance is deeply implanted in all these dialects, which have been examined; they provide, hy the process of inflection, for keeping a perpeton
dirinction between the animate and inanimate kingdoms. But where vitality and spirituality are so blended as we see them in their doctrine of animal souls, the inevitable result must be, either to exalt the principle of life, in all the classes of nature, into immortality, or to sink the latter to the level of mere organic life. Indian word-makers bave taken the former dilemma, and peopled their paradise not only with the souls of men, but with the souls of every imaginable kind of beasts. Spirituality is thus clogged with seusual accidents. The bumen soul hasagers, and it must have food deposited upoo the grave. It suffer from cold, and the body must be wrapped about with cloths. It is in darkness, and a light must be kindled at the head of the grave. It wanders through plains and across streams, subject to the providences of this life, in quest of its place of enjoyment, and when it reaches it, it finds every species of sensual trial, which renders the place not indeed a heaven of rest, but another experimental world-very much like this. Of punishments, we hear nothing; rewarda ara looked for abundantly, and the idea that the Master of life, or the merciful Spirit, will be alike merciful to all, irrespective of the acts of this life, or the degree of moral turpitude, appears to leave for their theology a belief in restorations or universalism. There is nothing to refer them to a Saviour ; that idn was beyond their conception, and of course there was no occasion for the offices of the Holy Ghost. Darker and more chilling views to a theologian, it would be impossible to present. Yet it may be asked, what more benign result could have been, or can now be, anticipated in the bearts of an ignorant, uninstructed and wandering people, exposed to sore vicissitudes in their lizes and fortunes, and without the guidance of the light of Revelation?

Of their mythology proper, we have space only to make a few remarks. Some of the mythologic existeaces of the Indians admit of poetic uses. Manabozho may be considered as a sort of terrene Jove, who could perform all things whatever, bat lived some time on earth, and excelled particularly in feats of strength and manual dexterity. All the animala were subject to him. He also survived a deluge, which the traditions mention, having elimbed a tree on an extreme elevation during the prepalence of the waters, and sent down various animals for some earth, out of which he re-created the globe. The four cardinal points are so many demi-gods, of whom the West, called Kabeon, has priority of age. The Fast, North and South are deemed to be his sons, by a maid who incautiously exposed herself to the west wind. liagoo (Iagoo) is the god of the marvellous, and many most extravagant tales of forest and domestic adventure are beaped upon him. 'Kwannd is a sort of Samson, who threw a huge mass of rock such as the Cyelops cast at Mentor. Weeno is the god of sleep, who is represented to have numerous amall emissaries at his service, reminding os of Popera
ereation of gnomes. These minute emissaries climb up the forehend, and wielding a tiny club, knock individuals to sleep. Pauauk is death, in his symbolic attitude. He is armed with a bow and arrows. It would be easy to extend this enumeration.

The mental powers of the Indian constitutes a topic whieh we do not deaign to discuss. But it must be manifeat that some of their peculiariLies are brought out by their syatem of mythology and spirit-cralt. War, public policy, bunting, abstinence, endurance and courageous adventure, form the leading topics of their mental efforts. These are deemed the appropriate themes of men, sages and marriors. But their intellectnal easags have also a domeatic theatre of exbibition. It is here that the Indian mind unbends itself and reveals some of its less obvions trata, Their public speakers cultivate a particular branch of oratory. They are careful in the use of words, and are regarded as atandards of purity in the language. They appear to have an acrurate ear for sounds, and delight in rounding off a period, for which the languages afford great facilities, by their long and stately words, and multiform inflexions. A drift of thought-an elevation of style, is observable in their public speaking ubich is dropt in private conversation. Voice, attitude and motion, are deemed of the highest consequence. Much of the meaning of their expressions is varied by the vehement, subdued, or prolonged tone in which they are uttered. Jo private conversation, on the contrary, all is altered. There is an equanimity of tone, and easy vein of narration or dialogue, in which the power of mimiery is most atrikingly brought out. The very voice and words of the supposed speakers, in their fictitions legends, are assumed. Fear, supplication, timidity or boasting, are exaclly depicted, and the deepest interest excited. All is ease and freedurn from restraint. There is nothing of the coldness or severe formality of the council. The pipe is put to its ordinary use, aod all its bymbolic sanctity is laid aside with the wampum belt and the often reiterated state epithets, "Nosa" and " Kosinan,"i. e. my father and owr father.

Another striking trait of the race is found in their legends and tales. Those of the aboriginal race who excel in private conversation, become to their tribes oral chroniclers, and are relied on for historical traditions as well as tales. It is necessary, in listening to them, to diatinguish between the gossip and the historian, the narrator of real events, and of nursery lales. For they gather together everything from the fabslous feats of Manebozho and Misshozha, to the bair-breadth escapes of a Pontiac, or a Black Hawls. These nerrators are generally men of a good memory and a certain degree of humor, who have experienced vicissitudes, and are cast into the vale of years. In the rehearsal of their tales, transformations and tranamigrations are a part of the mechinery relied on; and some of them are as accurately adapted to the purposan of amusement or instruction, as if Zoroaster or Ovid bimself had been
conalted in their production. Many objects in the inanimate ereation, according to theme Lales, were originally men and women. And numerous animals had other forms in their first stages of existence, which they, as well as human beings, forfeited, by the power of necromascy and tranamigration. The evening atar, it is fabled, was formerly a woman An ambitions boy became one of the planets. Three brothers, travelling in a canoe, were translated into a group of stars. The fox, lynx, hare, rohin, eagle and numerous other species, retain places in the Indian system of astronomy. The mouse obleined celestial elevation by creeping up the rainhow, which Indian story makes a flossy mass of bright threads, and by the power of gnawing them, he relieved a captive in the sing. It is a coincidence, which we note, that eroan srajor is called by them the bear.

These legends are not confined to the sky alone. The earth also is a fruitful theatre of trenaformations. The wolf was formerly a hoy, who, heing neglected by bis parents, was transformed into this animal. A shell, lying on the shore, was transformed to the raccoon. The brins of an adulterese were converted into the addikumaig, or white fish.

The power of transformation was veriously exercised. It most commonly exisled in magicians, of whom Abo, Manabosh or Manabozha, and Mishosha, retsin much celehrity. The latter possessed a magic canoe which would rush forward through the water on the utterance of a charm, with a speed that would outatrip the wind. Hundreds of miles were performed in as many minutes. The charm which be uttered, consinted of a monosyllable, containing one consonant, which does not belong to the language; and this word has no definable meaning. So that the language of magic and demonology has one feature in common in all ages and with every nation.

Man, in his common sbope, is not alone the subject of their legends. The intellectual creations of the Indians admit of the agency of giants end fairies. Anal and his progeny could not have created more alarm in the minds of the ten faithless spies, than do the race of fabulons Weeadigos to the Indian tribes. These giants are represented as cannibals, who ale up men, women and children. Indian fairies are of two classes, distinguished as the place of their revels is either the land or water. Land-fairies are imagined to choose their residences about promontories, water-falls and solemn groves. The water, besides its appropriate class of equatic fairies, is snpposed to be the reaidence of a race of beings called Nihanaba which have their analogy, execpt as to sex, in the mermaid. The Indian word indicates a male. Ghosts are the ordinary machinery in their tales of lerror and myatery. There is, perhape, e glimmering of the idea of retributive justice in the helief that ghoste ad apirils are capable of existing in fire.

Mt Frind :-Feeling an insatiable deaire to see the interior of a country whose frontiers had afforded me so many subjects of remark, and of whose wealth and population I continued to hear new and interesting accounts, I determined to make but a short stay at Detroit, and to select some of the great commercial cities of the Atlantic, as the theatre of my remarks. I frequently met people who said to me:" \(\mathbf{O} \mathrm{W}_{\text {a wanosh, }}\) if thou wouldst form an adequate idea of the American people, hasten to view their populous inland towns and great trading cilies. If thou wouldst see ships that can withstand the tempest, or brave the batde, visit their navy-yards and their spacious hatbora. If thou hast a curiosity to know the principles of their government and laws, and to hear their great civil chiefs apeak in council, visit their political capitals and legislative assemblies. In short, in whatsoever department of knowledge thou would perfect thyself, whether it be to contrast the manners, customs, laws, or opinions of the civilized and savage state-to acquire a just conception of their agriculture, commerce, and manufactures-their source of national wealth-their aystem of domestic economy, and mode of transacting business-their scientes, their arts, their painting, their statuary, their poetry, their muaic, or their national character-the sea-board is thy field for observation, stricture, and comparison."

So fully was I convinced of the justness of these remarks, that I determined to loae not a moment in profiting hy them; and making the necessary dispoaition, I embarked with my attendants on board of a vessel which, by some extriordinary effort of human ingenuity, was rapidly propelled through the water, without the aid of oars or of sails. Thou ert ready to say that my credulity has been imposed upon, hat I can nevertheless assure thee of the trath of my assertion. I was told that its
motion wan produced by the power of steam; but it was a long time, and not until afler repeated examinations, that I could be convinced of the mode of its production and operation, which is traly wonderful; and of all that I have seen of the mechanic arts of this ingenious people, this is by far the inost extroordinary example. This species of vessel is claimed by the Americans as an invention peculiarly their own, and truly, I think we cannot deny them the merit of the invention. "Who," I observed to a person atanding near a wheel on deck, and who appeared to have this powerful engiae as much at commad, as our young wartiors who, with their paddles, guide their buoyant canoes over the limpid bosom of the northern lakes; "Who," I observed, "was the inventor of this mighty work, which equally defies the currents of the wind, and the force of the tide." "Fulton," was the reply. "Surely," I resumed, "the admiration of his genius and his services cannot be restricted to his own country, of which he has beea the more immediate benefactor, but must extend over the other quarters of the world, who may avail themselves of the advantages which this invention affords to accelerate the motions of commerce, and facilitate a speedy exchange of products." "Nevertheless," he replied, "the merit of the diseovery has been denied in certain parts of the European continent and European Isles, and there have not been wanting those who have made the most strenuous efforts to rob him of his well-earned farme." "Is it poesible then," I exclaimed, "that civilized nations are unjut ?" This reveals a new trait of refined society, whieh I have heretofore thought was ouly the reproach of savages and barbariaus.

Among the number of passengers who crowded this vebicle, I observed a singular custom which prevailed smong the men doring the eveniag. Four persona sat upon opposite sides of a table, and alternately threw down pieces of stiff paper, contaning certaio hieroglyphical marks, and I frequently heard thern vociferate, clubs ! diamonds! spades ! It was a loog time before I ventured to iaterrogate any person on the subject, lest I should disturb a ceremony, which, from the great earnestaess and fixed attention of the persons, I concluded might possibly be a part of their religion. Again, it occurred to me that this was some mathematical process, and the result would be carefully published in the transactions of their learned societies. The Americans, thought I, are a grave, a thinking, and a philosophical people; and all their efforts are directed towards the promotion of great and useful objects. But, ob spirit of the groat Garabungo, chief of many tribes! bow prone is a stranger to fall into errora of the grossest kind ! Wouldst thou believe jt, that what I supposed to be a pbilosophical inquiry, or a ceremony of religion, turns ont to be a ' mere amusement of the game of cards. Canst thou credit it, that the mame people who invent steamboats, build cities of brick, squander a
great portion of their time in this idle, insipid, and (as I am told) expensice amusement. I bave since found, on inquiry, that to supply these cards forms the business, not only of a particular class of native artizans, but that vast quantities are imported from foreign markets; and that the country is thus annually drained of a considerable amount of money. Thus thou wilt see, my friend, that the amusements of one class of society constitute the business of others, and in this way tradea and manufactures are prodigiously multiplied.

There is another custom prevalent among this people, which has struck me as very extraordinary, It is that with regard to eating. The Indian always eats when he is hungry: the white man, when the bell rings. The lndian makes a meal from one dish of meat or fish: the white man gets up diasatisfied if he has not tasted of twenty; and besides, he must have tarls and sauces, and creams, and sugar, and vinegar, and oil, and mustard, and all, perhaps, in the same dish. Why should he therefore consplain, if his frame is racked with rheumatism and the gout at the age of thirty? But this exercise and frequent eating creates employment for several other classes of menof the market-man, who fallens poultry-of the cook, who stewa them -of the waiter, who carries them on the table-of the potter, who furnishes the plateg-of the cutler, who falricates knives, \&c. Thus are wants and the miseries of the people accumulated beyond measure.
We reached the town of Buffalo, after a pleasant voyage of two days. I shall only remain long enough to repeat my observations upon the style of architecture, the mode of merchandizing, the dress, and otherpoints, with which I am not yet sufficiently iamiliar to hazard a defnite opinion. Ever thine,

Watanor.

No. IV.
Alpany.
My Frisnd :-I reached this city oa the fourth day after my departure from the Lake of the Eries, having heea jostled in stages, crowded in taverns, and hurried through towns and villages, which succeeded each other with such rapidity that I bave procured no eccurate knowledge of their population, or of those things which are the objects of peculiar admiration in each. I only recollect a long line of country, highly cultivated and improved, in which thronged towns, airy villagea, fields of grain, orchards bending under the weight of their fruit, amall

\footnotetext{

}
with firm arches of stone, and broad-wheeled teams creaking under the aocamulated products of agriculture, or loaded with boxes of merchardive, passed before the eye with that indistinct and evanescent delight, which is oflen experienced on descending a rapid stream, where every object on shore seems to have taken wings, and to be rapidly flying in an opposite direction. But, there are, nevertheless, many things of which I have obtained an accurate perception, and which I shall hereafter present to thy imagination.

I had acarcely accommodated myself with lodgings in this town, which it is proper I should advise thee, is the political metropolis, or (to apeak more intelligibly) the seat of the council fire of one of those great and growing commonwealths which form the American confederacy, when one of my attendants entered my room in the utmost consternation. "They will kill thee, Wawanosh, and me also! Oh, son of the greatest of chiefs, death is upon us! Fly, instantly, or we are all undone. Is it for this, I have followed thee from the land of pleasant shades? Is it for this, I have for ever bid adien to the dark-eyed Guldah, and to the seenes of every joyful recollection? Yet, think not, oh my chief, it is death I fear; but how can I leave my bones in the land of strangers !" He had scarcely uttered these words, when the earth trembled with the quick repented volleys of exploding mustetry, and the piercing tones of harsh and warlike music. Every window of my apartment rattled with the appalling ahock, and the doors flew open upon theirhinges. It is not the custom of our people to shrink from inevitable death, but to suffer its most lingering torments with stoical forlitude. Nor did I visit the abodes of white men to taico lessons in bravery. I arose immediately upon my feet with an air of composure, and gathering the folds of my cloak with one hand, laid the other upon a short war-lance that had never failed. But seeing nobody enter, I began to reproach myself with having entertained suspicions that must do extreme injustice to the character and feelings of white men. Suspecting a deception, I immediately proceeded to ascertain the cause of so unseemly a tumult. Surely, 1 reffected, a troop of madmen have broken out of their confinement, and are thus, in defiance of the civil authorities, disturbing the peace and harmony of aociety. Or, perhrps, some hostile enemy has fallen suddenly upon the city; and if so, I will at least collect my attendants and become a sharer in the conflict. But when shall I become acquainted with the curtoma of this singular penple, or how shall I describe to thee my astonishment on learoing that all this tamult and alarm proceeded from one of the ordinary parades of the local militia, who are frequently thus exercised during a time of peace, that they may become more expert in the emergency of war? Hence, all their warriors, between the ages of eighteen and forty-five, are called out under their respective war chief,
several times in the course of the year, and wheeled, and marched, and trained to arrange themselves into mathematical figures, which are curiously changed and multiplied, as if they meant to accomplish physical results by the same process which is attained with such certainty by the inductive powers of a discipthed imagination. Eut those who have given most attention to this subject, observe that they cannot perceive that their warriors are more perfect in the mancuvres and military manual now, than they were forty years ago. Nay, it is even asserted hy some, that there is an actual retrogression in these particulars. I am, of course, unable to judge; but there appear to me to be two reaults which are certainly attained by this systent of holiday exercise; first, the warriors have an opportunity of displaying their fondness for feathers and pie-colored coata; and secondly, the tavern-keepers, who are a very numerous class of society, are enabled to dispose of a greater quantity of rum and brandy, than otherwise would be cailed for. Thus the feather merchant, the dyer of red cloth, and the distiller of wholesome grain into noxious liquors, are at once encouraged and supported. These parades also give employment to the tailor who bedizens their garments with lingel lace-the cutler who equips them with iron knives of prodigious length-the tanner who furnishes sheep skins for their drums, and to various other trades and manufactures, which are more or less dependent upon these periodical trainings. Nor ahould we overlook the powder-maker, who ransacks coal-pits and nitre caves, and sulphur mines, and even more noxious places, to procure the constitnente of that detonating mixture, which enables the fair-weather warriors, at least four times per annum, to disturb the student in his closet, and throw delicate ladies into fis. Oh, genius of valor! which presides over the land of my forefathers, whisper it not to the apirit of Pootiac, Lest he sbould laugh in his grave, nor to the spirit of Powhatan, leat he should re-animate his mouldering bones, and appear upon earth to deride sach a mockery of war.

Nothing excited in me a greater curiosity than the warlike musie which forms so conspicuous a part of every military parade; and there is this difference between an Indian and American army going to battle, that the former strike terror into the hearts of their enemies by raising the shout of defiacce, while the latter cndeavor to inspirit and fortify theirs, hy the incessant rolling of their drums. The latter instrument is merely an improvement upon the Indian drum, which has only one head, and perhaps more nearly resembles the tamborine of the whites. It must be confessed, however, that the one-headed drum, or tamborine, of these people is provided with a greater profusion of bells, for which they appear to possess a great fondness. And here, let it be remarked, that this passion is alike strong both in the white and red man, the only difference consisting in the position in which they arc worn, or em-
ployed. Thus the whits man piques himself upon his modesty if he has only forty large bells arouad the necks of a pair of horses, or only three yards of jingling cbains to his sword belh whereas the Indinn prefers all his bells upon the fringe of his deer-skin shoes, or upon his leggings, or depending from his ears.

I have already seen much of this people, but have not yet been able to perceive that they are happier than the simple sons of the forest. But I entreat thee, wait with patience, and I will endeavor to unfold to thy imagination, many sources of their miseries, their follies, and their multiplied vices.

Ever thine,

\section*{Wathamosh}

\section*{THE CHOCTAW INDIANS.}

Bra letter from Fort Towson, dated Oclober 23d, we learn (rays the Arkansas Banner) that the past season has been unfavorable to bealth, and to the labors of the agriculturists of that region. Many of the Choclaws and Chickasaws have died. Their corn and cotlon crops heve not been so productive as in former yeara, although they have devoted more labor to their fields, abandoning almost entireiy their idle and vicious amusement of ball-playing, and employing their whole time upon their farms. Civilisation is rapidly progressing among these Indians, under the humane policy of our goverament in its protecting intercourae with them. They now, with the sinple domestic loom, mannufacture nearly all their wearing apparel, and their farms fuminh them with money, while they also barter with their tradera for such luxuries and other articles as they may require. They have teachern, preachers, and temperance lecturers among them; and with all these advantages, together witb the richness of the soil and location of their country, if they do not become rich and happy, they are truly - perverse race.

Orservation the parent or scrence.- One of the ancient moden of kindling a fire by friction, among the Red men, was this: two piscea of wood were taken, one soft and dry, the other hard. A earity was made in the soft piece, and the hard one, brought to a point, so as to fit the cavity. The sof piece was then held between the knees, and the hard one turned swifily between the haods, in the manner of a drill

\section*{MATERIALS FOR INDIAN HISTORY.}

```

    AMTEPIOR GAMDA OF INDIAN&,
    ```

1828, July 12th. Antoine Maucee, Alexis Blais, and Joseph Montree, freed men of Indian blood or connexions, ordered from the Iodizn Fillages last fall, presented themselves for a decision on their respective cases.

Maucee stated several facts in extenuation of his offence. He said be had served as a boatman in the Indian trade eighteen years-bad married an Indian wife and raised a family, and during all this time, with the exception of ahort visits to Mackenac with his bourgois, had reaided in the Indian country. On the expiration of his laat eogagement he went to St. Peter's, and while there, made eight canoes for Mr. Bailly, from whom he got the few goods that were seized at Sandy Lake by Mr. Johnstan. He had intended, however, to go to Mr. Johnston for a license, and he had used the goods, in a great measure, to procure a mere support for his family. He bad left Sandy Lake last fall, passed the winter at La Pointe; and had come down early in the spring, and, as he had lost a great deal of time, and performed a very long journey, leaving his family behind him, he requested that be might be allowed to return, with a permit to trade. I told him, that his remaining inland, after the expiration of his engagement, was contrary to instructions. That being a Canadian by birth, be could not be licensed as a trader. That be might go inland in his old eapacity of a boatman, should any American citizen be willing to employ him and give a bond for his future conduct ; and that I should refer the final decision upon bis goods and peltries to Mr. Johnston, on account of my imperfect knowledge of some circumstances necessary to a correct decision.

Alexis Blais pleaded ignorance of the instructions which were given to traders. He had no other object in remaining inland than to get a livelibood. He came out, as soon after being notified, as his health would allow. And be supposed, had be been willing to serve Mr. Aitkin at Sandy Lale, or to give him the avails of his hunt, no complainto

\footnotetext{
- Enclosed in an offecial better to the Wer Department of the date.
}
would bave been made against bim. No goods or peltries were formd in his possession, and he did not desire to return to the Indian conntry. I informed him, that the construction put on the Indian laws, prohibited any white man from following the pursuits of a bunter on Iodian land, that it also forbids the residence of boatmen at Indino campe or villages, after they have served out their engagements, \&c.

Joseph Moblree is a metif, step-son of Macee. Says he was born and brought up in the Indian country, and has subsisted by hunting. Is unsequainted with the laws, but will follow the directions given him. I took pains to impress upon his mind, through the medium of an interpreter, the situation in which he was placed with respect to our government and laws, and the steps it would be necessary for him bereafer to pursue.

Cracopes (The Six), a minor chief from Snake river on the St Croix, visited the office, accompanied by seven young wartiors. He brought a note from the sub-agent at La Pointe, in which he is recommended as a "deserving, manly lodian, attached to the U. S. government." As he had been several days without food, on his royage through Lake Superior, I directed a requisition to be made out for him and his young men, and told them to call on me after they had appeased their hunger.

Nexnaby (the person who hitches on bis seat), of Sault Ste-Marie, lodges a complaint against Mr . Butterfield and one of his ranners (i. e., persons employed to look afler credits given to Indians, or carry on a petty traffic by visiting their camps). He statea that in making the traverse from Point Iroquois acrosa the straits of St. Mary, he was met by young Holliday, who lashed his canoe alongside, and after giving him a drink of whisky, persuaded him to land on the Canads shore, where they are out of the reach of the trade and intercourse lawn. They landed at \(P_{t .}\) aux Chenes, where H.'s tent was found pitched, who invited him into \(\mathrm{it}_{\text {, }}\) and gave him more drink. He then went to the lodian's canoe, and brought in his furs. Something was then given him to eat, and they embarked together in H.'s canoe, taking the furs, and lenving his own canoe, with his wife, to follow. On reaching St. Marie's be was conducted to Mr. B.'s store, and told to trade. He consented to trade six large and two small beavers, and twenty musk rats, for which be acknowledged to have received satisfaction. He was freely supplied with whiaky, and strongly urged to trade the other pack, containing the principal part of the hunt, but he refused, saying he had brought it to pay a credit taken of Mr. Johnston. This pack, he says, consisted of six large, and two small beavers, two otters, six martins, ninety muskrats, and four minks. As an equivalent for it, they proceeded to lay out for bim, as be was told and shown next morning, a blanket, hat, pair of legging of green cloth, two fathons strouds, one barrel of flour, one bag ff corn, and three kegs of whiskey. He, however, on examining it,
refused to receive it, and demanded the pack of furs to go and pay his credit.-Decision deferred for inquiry into the facts.
July 12th. Chegud, accompanied by a train, \&ec., made a visit of congratulation on my return (after a temporary absence).

Jnly 14th. Revisited by Chacopee and his young men. He addrassed me in a fine, manly tone and air. He referred to his attendance and conduct at the treaties of Prairie du Cbien and Fond du Lac, as an ers from which it might be known that he was attached to our goverument and counsel. The object of his present visit was to renew the acquaintance he had formed with me at those places-to say that he had not forgotten the good advice given him, and to solicit charity for his followers. He presented an ornamented pipe as an evidence of his friendship.

Jaly 15th. Visited by Monomine Cashe (the rice maker), a chief from Post Lake in that part of the Chippewa country bordering on Green Bay. He was accompanied by Muckwakwut (Salan's ball in the clouds) and five other persons composing their lamilies. In the apeech made by this chief, whose influence and authority are, I believe, quito litnited, he said that his visit to me had been produced by the favorable impressions he bad received, while attending the treaty of Butte de Morts (Wisconsin). That be had preserved the words which bad been uttered in council by his American fathers, and was happy that all cause of difference with their neighbors, the Winnebagoes and Monomners, had been taken away, by fixing the lines of their landa, \&c. He presented four strands of wampum to confirm his professions of good will. His companion also got up, and spoke for several minutes, and concluded by requesting, "that his father would not overlook him, in distributing any presenta he intended to make them." He presented a pipe. After he was seated, I asked him, as I was penning these minutes, the signification of his name, Muckwakwut, as the meaning did not appear obvious. He aniled, and replied, that in former times his ancestors bad eeen devils playing ball in the air, and that his name was in allusion to the ball.

July 16th. Visited by Tens Couvret (the Lowering or Dark Clond), a noted war chief of leech Lake, Upper Mississippi. He states that Mr. Oaks took from bim, two years ago, nine plus" and bas not yet paid him; together with a medal, which last was not returned to him until his arrival at Fond du Lac this spring. He also states, that Mr. Warren took from bim, while he was at La Pointe on bis way out, a pack of thirty abininicqua** (equal to thirty full-sized, seasonable beavers), and has not, as yet, offered him anything in payment.

Sbingaba Wossen (the Image Stone), Shewabiketon (the Jingling Metals), and Wayisbky (the First born-Son), the three principal cbiefs of the Home band, with seventy-one men, women and children, visited me to

\footnotetext{
- Pher. Fr. Abiminiegus, Alg. The relue of a full botver stio
}
congratulate me on my safe retura from Detroit. The old chief inquired if there was any news, and whether all remained quiet betwees ua and the English.

Gueule Plat, or Ashkebuggecoash (the filt mouth) of Leech Lake, Upper Mississippi, announced his arrival, with sixty persona, chiefly wartiors and hunters. He brought a letter from one of the principal traders in that quarter, backed by the subragent of La Pointe, recommending him as "the most respectable marr in the Chippewa nation." He is asid, by general consent, to be the most influential man in the large and powerful band of Leech Lake, comprising, by my latest accounte, seventeen bundred souls. His authority is, however, that of a villege or civil chief, his coadjutor, the Lowering Cloud, having long bed tho principal sway with the warriors. Being his first visit to this agency, although he had sent me his pipe in 1822, and as he said, the first time be bad been so far from his native place in a south-eastely course, I offered him the attentions due to his rank, and his visit being an introductory one, was connmenced and ended by the customary ceremonies of the pipe. The chief, Gros Gueulle (Big Throat), together with Majegabowe, and the Breche's son, all of Sandy Lake, arrived this day, accoanpanied by four other persons, and were received with the customary respect and attention. Having come a long distance, their first and moat pressing want was food. It is indeed astonishing, that the desire of showing themselves of as men of consequence in their nation, the expectetion of any presents or gratifications, or the hope of any notice or preferment whatever, should induce these people to nndertake such long and hazardous joumeys, with such totally inadequate means !

July 17th. The Gros Guealle repented his visit, saying that hio family had been so long without a meal of hearty food, that the issue of yesterday had not sufficed to astisty them.

Magissaniekwy (Wampum Hair), of the Little Nebeech rapid, applied for provisions for himself and family, to enable them to return to his usual place of dwelling. This man happened to be sitting in front of bis lodge last spring in a copse of woods, near the banks of Muddy Late, at the instant when the Inspector of Customs of St. Mary (Mr. Agnew) had broken through the ice with his dog train, aud had exhausted himself in vain efforts to extricate himself and traid. A cry reached the ever open ear of the Indian, who hastened to the abore, and afer much exertion and hazard, aided by his father and family, was the means of preserving Mr. A.'s life. Anter getting the body out of the water, they drew it upon a small train to his lodge, where they applied dry clothing, prepared a kind of tea, and were onremitting in their attestions to restore wannth and animation to the system. When sufficiently restored, they conducted him to St. Mary's.

I invested him with a medal of the first elass, for this nohle act, wish-
ing by this mark of respect and the presents of clothing and food accompanying it, to forcibly impreas his mind with the high respect and admiretion sucb deads excite among civilized people, and in the farther bope, that it might prove a stimulus to the lukewarm humanity of others, if indeed any of the natives can be justly accused of lukewarmness in this respect. On visiting Fort Brady; Lieut. Morton presented him a sword-knot, belt, sce. Some other presents were, I believe, made him in addition to those given by Mr. Aguew hinself.

July 13th. Miscomonetoes (the Red Insect, or Red Devil, the terme may mean both), and family and followers, twelve persons in all, visited the office. His personal appearance, and that of his family, bespoke wretchedness, and appeared to give force to his strong compliants against the traders who visited Ottowa lake, and the head waters of Chippewa river of the Mississippi. He observed that the prices they are compelled to pay are extortionate, that their lands are quite destitute of the larger animals, and that the beaver is nearly destroyed. He also complained of white and half-breed hunters intruding on their grounds, whose meana for trapping and killing animals are superior to those of the Indians. Aecording to his slatement, as high as four plus (about \(\$ 20\) ) have been paid for a fothom of strouds, the same for a 2 point blanket, two plua for a pair of scarlet leggins, \&e.

Ten reparate parties of Iodians, numbering ninety-four souls, presented themselves at the office this day, in addition to the above, from varions parts of the interior, and were heard on the subject of their wante and wishes.

19th. Gubule Plat repeated bis visit with his followers, and made a speech, in which be tonk a view of his intercourae with the English and Americans. He bad passed his youth in the plains west of Red River, and was firat drawn into an interconurse with the British ageats at Fort William (L. Superior) where he received a medal from the late Wm. McGilvray. This medal was taken by Lieut. Pike, on visiting Leech Lake in 1806. He has visited the agency at St. Peter's, but cornplains that his path to that post bas been marked with blood. He was present during the atlack made upon the Chippewa camp by the Siour, near Fort Snelling, in the summer of 1827 . Is not satisfied with the adjustment of this affair. But is inclined to peace, and has reco mended it to his young men. They can never, however, he says, cotant upon the good will of the enemy, and are obliged to live in a constant slate of preparation for war. They go out to hunt, as if they were going on a war party. Tbey often meet the Sioux, and amoke with them : but they cannot confide in them.

Speaking of the autbority exercised over their country for the purpose of trade, he said, "the Americans are not our masters--the English were not our masters-the country is ours." He wished that traders shoold
be allowed to visit them, who would sell their goods cheoper, and said that more than one trader at each trading post wes desired by him and his people.

He modestly disclaimed authority over his band--said be wan so chief. The Indians sometimes followed his advice. But they oflener followed their own will. He said, Indians were fond of change, and were alwayt in hopes of finding things better, in another place. He believed it would be better if they would not rove so much. He bad ever acted on this principle, and recommended it. He had never visited this place before, but now that be had come thus far, it was his wisb to go to Michilimackinac, of which he had beard much, and desired to see it. He wat in hopes his journey would prove of some service to him, \&c. He solicited a rifle, aod a hat.

The Breche, alias Catawa beta (Broken Tooth), entered the office with one or two followers, in company with the preceding ; seeing the office crowded, he said he would defer speaking till another day. This venerable chief is the patriarch of the region around Sandy Lake, an the Upper Mississippi. He made his first visit to me, है few days after the landing of the troops at this post in 1822 . In turning to some minates of that date, I find he pronounced himself"the friend and advocate of peace," and he referred to facts to prove that his practice had been in accordance with his profession. He discountenanced the idea of the Indians taking part in our wars. He said he was a sraall boy, at the taking of old Mackinac (1762). The French wished him to take up the war club, but be refused. The English afterwards thanked him for this, and requested bim to raise the tomahawk in their favor, but he refused The Americans afterwards thanked him for this refusal, hut they did not ask him to go to war. "They all talked of peace," be said, "but still, though they talk of peace, the Sioux continue to make war upon us; very lately they killed three people."

The neutral policy which this chief so early unfolded, I have found quite cbaracteristic of his oratory (though his political feelings are known to be decidedly favorable to the British government).

Omeeshug, widow of Ningotook, of Leech Lake, presented a memorandum given by me to her late husband, during my attendance at the treaty of Prairie du Chien, in 1825, claiming a medal for ber infant nou, tat exchange for a British medal which had been giveq op. On inquiry, the medal surrendered originally belonged to Waukimmesas, a prior busband, by whom she also had a son, named Tinnegans (Shoulderblade), now a man grown, and an active and promiaing Indian. I decided the latter to be the rightful heir, and entrusted a new medal, of the second size, to Mr. Roussain, to be delivered to bin on his arrival at Leech Lake with the customary formalities.

Iauwind announced himelf as having arrived yesterday with twenty-
eight followers, belonging to the band of Fond du Lac. He had, it appeared, visited Drumruond Island, and took occasion in his apeech to intimate that be had not been very favorably received. Before elosing, he ran very nearly through the catalogue of Indian wants, and trusted his "American father" would supply them. He concluded by presenting a pipe. I informed him that he had not visited Drummond's in ignorance of my wishes on the subject; and that if he did not receive the presents be expected from me, he could not mistake the cause of their being withbeld.

The Red Devil came to take leave, as he had sent his canoe to the head of the rapids, and was ready to embark. He made a very earneat and vehement speech, in which be once more depicted the misery of his condition, and begged earnestly that I would consider the forlorn and impoverished situation of himself and his young men. He presented a pipe. I told bim that it was contrary to the commands of his Great Father the President, that presents should be given to any of his red children who disregarded his wishes so much, as to continue their visits to foreigo agencies. That such visits were very injurious to them, both in a moral and economical point of view. That they thereby neglected their hanting and gardens, contracted diseases, and never failed to indulge in the most immoderate use of strong drink. That, to procure the Latter, they would sell their presents, pawn their onaments, \&c., and I verily believed, were their haods and feet loose, they would pawn them for drink, so as to be for ever after incapable of doing anything towards their own subsistence. I told him, that if, under such circumstances, I should give him, or any other Indian, provisions to carry them home, they must not construe it into any approbation of their late conduct, but must ascribe it wholly to feelings of pity and commiseration for their situation, \&c.

Mongazid (The Loon's Foot), a noted speaker, and Jossakeed, or seer of Fond du Lac, arrived in the afternoon, atteoded by eleven persons. He bad scarcely exchanged salutations with me, when he said, that his followers and himself were in a starving condition, having bad very little food for several days.

Oshocar (The Osprey) golicited provisions to return home. This young man had been sent down to deliver a speech from his father, Kabemappe of the River St. Croix, in which he regretted his inability to come in person. The father had first atracted my notice at the treaty of Prairie du Chien, and afterwards received a small medal, hy my recommendation, from the commissioners at Fond du Lac. He appeared to consider himself under obligations to renew the assurance of his friendship, and this, with the hope of receiving some presents, appeared to constitute the object of his son's mission, who conducted bimself with more modesty and timidity before me, than prudence afterwands; for by extending his visit to Drummond Island, where both he and his father
were ouknown, he got nothing, and forfeited the right to claim anything for bimself, on his return bere. I sent, however, in his charge a present of goods of small amont, to be delivered to his father, who had not conntenanced his foreign visit.

Thirteen separate parties, amounting to one bundred and eighty-three souls, visited the office, and received issues of provisions, this day.
21st. Miniensowern, of Otowa Lake, made complaint that his canoe had been stolen, and he was left with bis family on the beach, without the means of returning. On inquiry into the facts, and finding them as atnted, I purchased and presented him a canoe of a capacity suitable to convey bis family home.

Cheanocwut (Lowering Cloud), called Tems Couetel by the French, principal war chief of Leech Lake, addressed me in a speech of some length, and presented a gamished war-club, which he requested might be hung up in the office. He bed done using it, and wished to put it aside. He had followed the war path much in his youth, but he was now getting old, and he desired peace. He had attended the treaty of Prairie du Chien to assist in fixing the lines of their lands. He recollected the good counsel given him at that place. He should respect the treaty, and his ears were open to the good advice of his great American father the President, to whose words he had listened for the last ted years. He refurred to the treachery of the Sioux, their frequent violation of treaties, \&cc. He hoped they ahould hear no bad necre (alluding to the Sioux), on their return home, \&e.

Wabehke fenale (The White Bird) solicited food. This young chief had volunteered to carry an express from the Sub-agency of Lepointe in the spring, and now called to announce his intention of returning to the upper part of Lake Superior. His attachment to the American government, his having received a small medal from His Excellency, Governor Cass, on bis visit to the Ontonagon river in 1826, added to the circumstance of his having served as a guide to the party who risited the mass of native copper in that quarter, in 1820, had rendered him quite anpopular with his band, and led to his migration farther west. He appeara, however, recently to have re-assured himself of success, and is as anxious as ever to recommend himself to notice. This anxiety is, however, carried to a great fault, being unsupported by an equal degree of good sense.

Anfamisiea (Little Thander), a Chippewa of mixed blood, from Red River, expressed a wish to speak, preparatory to his return, and drew a vivid outline of his various journeys on the frontiers, and his intercourse with the Hudson's Bay and Canadian governments. This man biad rendered bimself noted upon the frontiers by a successful rencontre with three grizly bears, and the hair-hreadth escape he had made from their clatches. He made, however, no allusion to this fact in hir speech,
bat referred in general lerms to the Indiant present for teatimonials of his character as a werrior and a bunter. He said he had now taken the American government fast by the hand, and offered to carry any conneel I unight wish to sead to the Indians on Red River, Red Iate, \&cc., and to use his influence in causing it to be respected. Hin appeal to the Indians was subsequently responded to by the chief, Taw Comoret, who fully confirmed his statements, ofc.

Duash beshog (Spotted Lynx), of Pelican Lake, requested another trader to be sent to that place. Complains of the bigh prices of goods, the acarcity of animals, and the great poverty to which they are reduced. Says the traders are very rigorous in their dealings, that they take their furs from their lodges without ceremony, and that ammuvition in particular is so bigh, they cannot get skins enough to purchase a supply.

Visited by nine parties, comprising pinety-one sonls.
22 d . Received viaits from and issued provisions to eighty-one persons.

23d. Wayoond applied for food for his family, consisting of six persons, saying that they had been destitute for some time. Ifound on inquiry, that he had been drinking for several days previons, and his haggard loots sufficiently bespoke the excesses he had indulged in. [On the following day, being in a state of partial delirium, he mo into the river, and was so far exheusted before he could be got out, that he died in the course of the night. It is my custom to bury all Indiams who die at the pust at the public expense. A plain coffin, a new hlanket, and shirt, and digging a grave, genertlly comprise this expense, which is paid out of the contingent fund allowed the office.]

Mizzys (The Catfish) called on me, being on his retort voyage from Drummoed Island, begging that I would give bim some food to ensble him to reach his home at Lapointe. This Indian has the charscter of being very turbulent, and active in the propagation of stories calculated to keep up a British feeling amongst the Indians of Lapointe. The reprimands he has received, would probally have led him to shup the office, were he not prompted by hunger, and the hope of relief.

Whole number of visitors, one hundred and thirty-five.
24th. Monoazid entered the office with his ornamented pipe, and pipe-bearer, and expressed his wish to apeak. He went at some length into the details of his own life, and the history of the Fond du Lac band, with which he appears to be very well acquainted. Referred to the proof he had given of attachment to government, in his conduct at tha treaties of Prairie du Chien and Fond du Lac; and to his services at a speaker for the Fond du Lac band which had been acknowledged by the Chippewn generally, and procured bim many followers. Said the influ* ence of the old chief at Fond du Lac (Sappa) had declined, at his own
had extended, \&c. He complained in general terms of the conduct of the traders of that post, but did not specify any acta. Said he had advised his young men to assent to their Father's request respeeting the copper lands on lake Superior, \&c.

Having alluded in his speech to the strength of the band, and the amount of their hant, I asked bim, afler he had seated himself, what was the population of Fond du Lac post. He replied with readiness, two hundred and twenty, of whom sixty-six were males grown, and fifty-four hunters. He said that these fifty-four hunters had killed during the last year (1828), nine huudred and ninety-four bears- what thir-ty-nine packs of furs were made at the post, and ninety packs in the Whole department.

Groses Gusule made a formal speech, the drift of which was, to ahow his influence among the Indians, the numerous places in which be had acled in an official capacity for them, and the proofs of attachment be had given to the American govemment. He reated his merits upon these points. He said he and his people had visited the Agency on account of what had been promised at Fond du Lac ; several of his people had however gone home, fearing sickness, others had gone to Drummond Jsland for their presents. For himself be said, he shonid remain content to take what his American father should see fit to offer him.

I inquired of him if his influence with his people sad his attachment to the American government were such as he had represented, how it came that so many of the Sandy Lake Indians, of whom he was the chief, had gone to Drummond Island?

Shingaba Wosin requested that another Chippewa interpreter might be employed, in which he was seconded by Kagzyosh (A bird in everlasting flight), Wayishkee, and Shewabekaion, chiefs of the home band. They did not wish me to put the present inlerpreter out of his place, bat hoped I would be able to employ another one, whom they conld better anderstand, and who could understand them better. They pointed ont a perton whom they would be better pleased with. But his qualifics tions extended only to a knowledge of the Chippewa and French languages; he was deficient in moral character and trustworthinens, and it was sufficiently apparent that the person thus recomuntended had solicited them to make this novel application.

28th. The wife of Metakossesgay (pare Tobacco) applied for food for her husband, whom she represented as being sick at his lodge, and unable to apply himself. The peculiar features and defective Chippewa pronunciation of this moman indicated her foreign origin. She is a Sioux by birth, having been taken captive by the Chippewas when quite young. A residence of probably thirty years has not been sufficient to give her a correct knowledge of the principles or pronunciation of the language. She often applies animate verbs and adjectives to inanimato
nooms, \&ce., a proof, perhape, that no such distinctions are known in her native tongue.

28th. Chacopbe, a chief of Snake River, intimated his wish to be beard. He said he had vigited the agency in the hope that some respect" would be shown the medal he carried. The government had thought him worthy of this honor, the traders had also thought him doserving of it ; and many of the young men of Suake River looked up to him to speal for them. "But what," he asked, "can I say? My father knows how we live, and what we want. We are always needy. My young men are expecting something. I do not speak for mybelf, hut I must ask my father to take compassion on those who have followed me, \&c. We expect from what our great father said to us at the treaty of Fond du Lac, that they would all be clothed yearly."

28th. Ahmakanonowa presented a note from Mr. Johnson, sub-agent at Lapointe, recommending him as "a peaceable and obedient Indian." He requested permission to be allowed to take a keg of whisky, inland, on bis return, and to have a permit for it in writing. I asked him the name of the trader who had sold bim the liquor, and who had aent him to mak this permit.

Wa roond's widow, requeated provisions, to enable her to return to her country. Granted.

30th. Chegod, a minor chief of Tacquimenon river, embraced the opportunity presented, by his applying for food for his family, to add some remarics on the subject of the school promised them at the signing of the treaty of Fond du Lac. He was desirous of sending three of his children. The conduct of this young man for eeveral years past, his sobriety, industry in bunting, punctuality in paying debts contracted with the traders, and his modest, and at the same time manly deportment, bave attracted general notice. He is neat in his dress, wearing a capot, like the Cenada French, is emulous of the good will of white men, and desirous to adopt, in part, their mode of living, and to have his children educated. I informed him, that the U.S. Senate, in ratifying this treaty, had struck out the article providing for a school.

31st. Shanegwunaibe, a visiting Indian from the sources of Monomone river of Green Bay, slated his object in making so circuitous a journey (he had come by way of Michilimackinac), to visit the agency. He had been induced, from what he had heard of the Lake Superior Indians, to expect that gemeral presents of clothing would be issued to ail the Chippewas.
"Nothing," observes the rub-agent at Lapointe, "but their Fretchedness, could ioduce the Indians to wander."

Aug. 3d. Gueule Plat returned from his visit to Micbilimackinac.

\footnotetext{
- This term was not meant to apply to personal respect, bat to presents of grods.
}

States that the egent at that port (Mr. Boyd) hed given tim a sheop, bat had referred him to me, when apeaking on the sabject of presents, \&ic., saying that he belonged to my ageacy.

Finding in this chief a degree of intelligence, united to habito of the strictent order and sobriety, and a vein of reflection which had enabled him to observe more than I thought he appeared aaxion to communicate, I invited him into my houee, and drew him into a conversation on the atate of the trade, and the condition of the Iodians at Leecb Lake, \&c. He said the prices of goods were high, that the traders were rigorous, and that there were some practices which be could wish to see abolished, not so much for his own salke," was for the sake of the Indians generally. That the traders found it for their interest to treat him and the priscipal chiefy well ; that be hanted diligently, and supplied himself with necesary articles. But the generality of the Indians were miserahly poor, and were severely dealt hy. He said, the last thing they had enjoined upon him, on learing Leech Iake, was to solicit from nae, another trader. He had not, however, deemed it proper to make the request in public council.

He slates that the Indians are compelled to sell their fors to one ason and to take what he pleases to give them in returt. That the trader fixes his own prices, both on the furs, and on the goods he gives in exchange. The Indians have no choice in the matter. And if it happens, as it did last apring (1828), that there is a deficiency in the outfor of goods, they are not permitted quietly to bring out their surplus furs, and seli them to whom they please. He gays that be saw a remurkable instance of this at Point aut Pins, on his way out, where young Holiday drew a dirk on an Indian on refusing to let him take a pack of furs from his canoe. He said, in speeking of this subject, "I wish my father to take away the sword that hangs over us, and let us bring down our furs, and sell tbem to whom we please."

He says that be killed last fall nearly one thoosand maskrats, thinteen bears, twenty martins, twelve fishers. Beaver he killed none, so they were all killed off some years ago. He says that fifty raty are exacted for cloth for a coat (this chief wears coata), the same for a three poins blanket, forty for a two and a half point blanket, one hurdred for a Mowtreal gun, one plus for a gill of powder, for a gill of shot, or for twentyfive bulleta ; thirty marling for a beaver trap, fifteen for a rat trap.

Speaking of the war which has been so long waged between the Chippewas and Sioux, to the mutual detrinent of both, he said, thet it had originated in the rival protensions of a Sioux and Chippewe chief, for a Sioux woman, and that various causes had since added fiel to the fime. He said that in this long wer, the Chippewas had been glimers of terriory,
that they were batder woodemen than the Sionx, and wereabla loatend thair ground. But that the fear of an enemy prevented the Chippewas from hunting some of the best beaver land, without imminent hazard. Ho bad himself, in the course of his life, been a member of iwenty-ive different war parties, and had escaped without even a wound, lhough, on one occasion, be with three companions, was compelled to cat his way through the enemy, two of whom were slan.

These remarks were made in privale conversation. Auxioun to mocure the influence and good will of a man so respectable, both for his standing and understanding, I had presented him, on his previous viait (July 19), with the President's large medal, accompanied by silver wristbands, gorget, \&e., silver hat-band, a hat for himself and son, sec. I now added full patterns of clothing for himself and family, kettea, traps, a fine rifle, ammunition, \&c., and observing his attachment for dress of European fashion, ordered an ample cloak of plaid, which would, in point of warmulh, make a good substitute for the blenkel. On e visit which be made to Fort Brady on the following day, Dr. Pitcher prasented his only son, a fine youth of sixteen, a gilt sword, and I believe some other presents were made by the officers of the 2d Regiment.

5th. Issued an invoice of goods, traps, kettles, \&ce., to the Indians, who were assembled in front of the office, and seated upon the green for the purpose of making a proper distribution. I took this occasion to remind them of the interest which their Great Father, the President, constantly took in their wellare, and of his ardent desire, that they might live in peace and friendship with each other, and with their ancient enemies the Sioux. That be was desirous to see them increase in numbers as well as prosperity, to cultivate the arts of peace, to participate in the benefits of instruction, and to abstsin from the use of ardent spirita, that they might continue to live upon the lands of their forefathers, and increase in all good knowledge. I told them they munt consider the presents that had now been distributed as an evidence of these feelings and sentiments on the part of the Preaident; who expected that they would be ready to hearken to his counsels, \&e.

I deemed this a suitable opportunity to reply to some remarisa that had fallen from several of the speakers, in the course of their summer visits, on the subject of the stipulations contained at the treaty of Fond du Lac, and informed them that I had put the substance of their remarks into the shape of a letter to the Department (ree official Letter, Aug. 2d, 1828), that this letter would be submitted to the Preaident and when I received a reply, it should be communicsted to them.

6th. Shingara Wossin and his band called to take leave previoua to their setting out on their fall bunts. He thanked me in behalf of an the Lpdian, for the presents distributed to them yesterdey.

Wafiesere (the first borm), a chief of the Home band, on calling to take leave for the season, stated that be had been disabled by sickness from killing many animats during the last year, that his family was large, and that he felt grateful for the charity ahown to his children, sc. This chief is a son of the celebrated war chief Waubojegg (the White Fisher), who died at Lapointe abvut thirty years ago, from whom he inherited a broad wampum helt and gorget, delirered to his grandfather (also a noted chief), by Sir William Johnson, on the tating of Fort Niagara, in 1759.

The allusion made to his family, recalled to my mind the fact, that he has had twelve children hy one wife, nine of whom are now living -a proof that a cold climate and hurdships are not alwaye adverse to the increase of the human species.

7th. Annamixies made a speech, in which he expressed himself pery favorahly of our goverament ; and said be should carry back a good report of his reception. He contrasted some things, very adroitly with the practices he had observed at Red River, Fort William, and Drummoond Island. Deeming it proper to secure the influence of a person who stands well with the Indians on that remote frontier, I presented him a medal of the 2 d class, accompanying it by some presents of clothing, \&c., and an address to be delivered to the Chippewas at the sources of the Mississippi, in which I referred to the friendly and humane diaposition of our government, ita desire that the Indians shoold live in peace, refrain from drink, \&c.

Tems Couvret, in a short speech, expressed himself favorably towards Annamikees, corroborating some statementa the latter hed made.

Chacopri came to make his farewell speech, being on the point of emharking. He recommended some of his followers to my notice, who were not present when the goods were distributed on the 5 th instant. He again referred to the wanta and wishes of the Indians of Snake river, who lived near the boundary lines, and were subject to the incursions of the Sioux. Says that the Sioux intrude beyond the line settled at the Prairie, \&c. Requesta permission to take inland, for his own use, two kega of whisky, which had been presented to him by Mr. Dingley and Mr. Warren. [This mode of evading the intercourse net, hy presenting or selling liquor, in a territory where the laws of Congress do not operate, shifting on the Indians the risk and responsibility of taking it inland, is a new phase of the trade, and evinces the moral ingenuity of the Fur Company, and their servants.]

8th. Grosse Guevib stated that, as he was nearly ready to return, he wished to say a few words, to which he hoped I would listen. He complained of the hardoess of the times, high prices of gooda, and poverty of the Indians, and boped that presents would be given to
them. - He alleged these causes for his visit, and that of the Sendy Lake Indians generally. Adverted to the outrage committed by the Sioux at St Peter's, and to the treaty of Praitie du Chicn, at which his fathera (alluding to Gen. Clarke and Gov. Cass) promised to purish the first aggressors. Requested permission to take inland some whiskypresecs this topic, and says, in reply to objections, that "Indians die whether they drink whisky or not." He presented a pipe in his own name, and another in the names of the two young chiefi, Wazhus Kuckoon (miskrat's liver,) and Nauganosh, who both received small medala at the treaty of Food du Lac.

8th. Breche, having announced his wish to speak to me on the 6 th ingtant, came into the office for that purpose. He took a view of the standing his family had maintained among the Sandy Lake Indians from an early day, and said that be had in his possession, until very lately, a Freoch flag, which had been presented to some of his ancestors, but it bad been taken to exhibit at Moatreal, by his son-in-law (Mr. Ermatinger, an English trader, recently retired from business). He had reneceived a muzzinyegay \(\dagger\) from Lieut Pike, on his visit to Sandy Lake, in 1806, but it bad been lost in a war excursion on the Missigsippi. He concluded by asking a permit to return, with some merchandise and liquor, upon the sale of which, and not on hanting, he depended for his support. \(\ddagger\) I took occasion to inform him, that I had been well acquainted with his alanding, character and sentimeuta, from the time of my arrival in the country in the capacily of an agent. That I knew him to be friendly to the traders who visited the Upper Missisippi, deasious to keep the Indians at peace, and not less desirous to keep up friendly relations with the authorities of both the British and American governments. But that I also very well knew that whatever political influence he exerted, was not exerted to instil into the minds of the Indians sentiments favorable to our syatem of government, or to make them feel the importance of making them atrictly comply with the American intercourse laws, \&c. I referred to the commencement of my acquaintance with him twenty days after my first landing at St. Mary's; and by narrating facts, and naming dates ond particulars, endeavored to convince him that I had not been an indifferent observer of what had passed, both cithin and without the Indian conntry. I also referred to recent events here, to which I attrihuted bis application to trade, which he had not thought proper, or deemed it neceasary to make in previous years. I cobcluded by telling him, that

\footnotetext{
- By visiting Drrmrnond Island, contrary to instructions, this chief and hir band had excluded themselves from the distribution made on the 5th Aug-
+ A paper-any written or printed dorument is so called.
4 This is one of the modern modes of getling goods into the country, in conIravantion of taw; Mr. Ermatinger being a forcigner, trades on the Canada side of the rivet.
}
he would see, that it wes impossible, in conformity with the principlea I acted upon, and the respect which I claimed of Indians for my coubsel, to grant his request.

11th. Guzule Plat came to take leave, preparatory to his retum He expressed his sense of the kindness and respect with which he had been treated, and intimated his intention of repeating his vivits to the agency, during the next season, should his health be spared. He said, in the course of conversation, that "there was one thing in which be had observed a great difference between the practices of this, and \(\mathrm{S}_{6}\). Peter's agency. There, whisky is given out in abondance-here, 1 see it is your practice to give none."

12th. Invested Oahinawa (the young mad), of the totem of the Loon of Leech Lake, with a medal.

15th. Issued provisions to the family of Kussepocoo, a Chipperyyan woman from Attrabasca, recently settled at St. Mary's. It geems the name by which this remote tribe is usually known, is of Chippewe origin (being a corruption of Ojeegevyan (a Fisber's skin), but they trace no affinity with the Chippewa stock, and the language is radically different, having very little analogy either in its structure or soonds. It is comparatively harsh and harren, and so defective and vague in its application, that it even seems qnestionable whether nonns and verbe have number.

18th. Visited by the Little Pine (Shingweakonce), the leading chief on the British shores of St. Mary's-a shrewd and polite man, who has united, at sundry periods, in himself, the ofices and infuecoee of a war clief, a priest or Jossakeed, and a civil ruler. The giving of public presents, on the 5 th, had evidently led to his visit, althongh be had not pursued the policy expected from him, so far as hin infineace reached among the Chippewas on the American shores of the Straita. He made a speech, well suited to his position, and glossed off with soves fine generalities, avoiding commitments on maiv points, and making them on minor ones, concluding with a string of wampum. I smoked and shook hands with him, and accepted his tendera of friendship, by re-pledging the pipe, but narrowed his visit to official propriaties, and refused his wampum.
22d. Magisaniewa, or the Wampum Hair, renewed his visit-gave me another opportanity to remember his humane act in the apring, and had his elaims on this acore allowed. The Indians never forget a good act done to them, and we should not permit them to surpass an in thir sespect.

Office of Indiai Agency,
Sault Ste-Marie, October 29th, 1828.
[Signed.] HENRY R. SCHOOLCRAFT, U. S. I. Agent.

\section*{THE MAGICIAN OF LAKE HURON.}
 otoray JORNSTON.

At the time that the Ottowas inhabited the Manatoline Islands, in Lake Huron, there was a famous magician living amongot them whose name was Masswäwënnini, or tbe Living Statue. It happened, by the fortane of war, that the Ottowe tribe were driven off that chain of islands by the Iroquois, and obliged to flee awny to the country lying between Lake Superior aod the Upper Mississippi, to the bents of a lake which is still called, by the French, and in memory of this migration, Lac Courtorielle, or tbe lake of the Cut-tars, a tern which is their nom de guerre for this tribe. But the magician Masswäwèinini remained behiod on the wide-stretching and picturesque Manatoulios, a group of islanda which had been deemed, from the earliest times, a favorite residence of the manitoes or spirits. His object was to act as a sentinel to his couotrymen, and keep a close watch on their enemies, the Iroquois, that he might give timely information of their mrovements. He had witb him two boys; with their aid he paddled stealthily around the shores, kept himself secreted in nooks and bays, and hauled up his canoe every night, into thick woods, and carefully obliterated his tracks upon the sand.

One day he rose very early, and started on a hunting excursion, learing tbe boys asleep, and limiting himself to the thick woods, lest be should be discovered. At length he came onexpectedly to the borders of an extensive open plain. After gazing around him, and seeing no one, he directed his steps across it, intending to strike the opposite side of it ; while travelling, he discovered a man of small atature, who appeared suddenly on the plain before him, and advanced to meet him. He wore a red feather on his head, and coning up with a familiar sir, accosted Massw当ëinini by name, and said gaily, "Where are you going ?" He then took out his smoking apparatus, and invited him to gmoke. "Pray," said he, while thus engaged, "wherein does your strength lie." "My strength," answered MasswEwëninini, " is similar to the human race, and common to the streggth given to them, and no stronger." "We must wrestle," said the man of the red feather. "If you should make me fall, you will say to me, I have thrown you, Wa gemena."

As soon as they had finished smoking and put up their pipe, the wreatling began. For a long time the strifo was doubtul. The strength' bo

Maspwäwěipini was every troment growing fainter. The man of the red feather, thoogh small of stature, proved himself very sctive, bat at length he was foiled and thrown to the ground. Immediately hie adveraary cried out, "I have thrown you: aca ge me na;" and in an inctant his antagonist had vanished. On looking to. the spot where he bad fallen, be discovered a crooked ear of mondamin, or Indian corn, lying on the ground, with the usual red hairy tassel at the top. While he wrageriing at this strange sight, and wondering what it could mean, a voice addressed bim from the ground. "Now," said the speaking ear, for the voice came from it, "divest me of my covering-leave nothing to hide my body from your eyes. You must then separate me into parts, pulling of my body from the apine upon which I grow. Throw me into differeat parts of the plain. Then break my spine and scatter it in small pieces near the edge of the woods, and return to visit the place, aflet one moon."
Masswä wë̈niniobeyed these directions, and immedialely get ont on his retum to bis lodge. On the way he killed a deer, and on reaching his canoe, he found the boys still asleep. He awoke them and told them to cook his venison, but be carefully concealed from them his adventure. At the expiration of the moon be again, alone, visited his wreatling ground, and to his surprise, found the plain filled with the apikea and blades of new grown corn. In the place where he bad thrown the piectes of cob, he found pumpkin vines growing in great luxuriance. He cooscealed this discovery also, carefully from the young lads, and after his return busied bimself as usual, in watching the movements of his exemies along the coasts of the inland. This he continued, till sucnmer drew near its close. He then directed his canoe to the coast of that part of the inland where be had wrestled with the Red Plume, drew up his canoe, bid the lads stay by it, and agan visited bis wrealing ground. He found the coro in full ear, and pumpkins of an immense aizo. He placked ears of corn, and gathered some of the pumplins, when a roice again addreased him from the cornfield. "Massw5wëinini, you have conquered me. Hed you not done so, your existence would hare been forfeited. Victory bas crowned your strength, and from benceforth you ahall never be in want of my body. It will be nourishment for the buman race." Thus his anceators received the gift of corn.
Masswëwëinini now returned to his canoe, and informed the young men of hia discovery, and showed them specimens. They were antooished and delighted with the novelty.

There were, in thone days, many wooderful things dons on theen inlands. One night, while Manswäwënini was lying down, he heard voices speaking, but be still kept his head covered, as if he had not heard them. One voice said, "Thin is Masswäwëinini, and we most get his heart." "In what way can we get it "" said another voice. "Yoa
must put your hand in his moath," replied the firat voice, "and draw it out that way." Masswëwënnini still kept quiet, and did not atir. Ho soon felt the hand of a person thrust in his mouth. When sofficiently far in, he bit off the fingers, and thus egcaped the danger. The voices then retired, and he was no further molested. On examining the fingern in the morning, what was his surprise to find them long wampum beads, which are held in such high estimation by all the Indian tribea. He had alept, was his custom, in the thick woods. On going out to the open shore, at a very early hour, he saw a canoe at a amall distance, temporarily drawn up on the beach; on coming closer, he found a man in the brows and another in the stern, with their arms and hands extended in a fixed position. One of them had lost its fingers: it was evidently the man who had attempted to thrust his arm down his throat. They were two Pukwudjininees, or fairies. But on looking closer, they were found to be traneformed into slatues of stone. He took these, stone images on shore, and set them up in the woods.

Their canoe was one of the most beautiful structures which it is possible to imagine, four fathoms in length, and filled with bags of treasures of every description and of the most exquisite workmanship. These bags were of different weight, according to their contents. He busied bimself in quickly carrying them into the woods, logether with the canoe, which he concealed in a cave. One of the fairy images then spoke to him and said: "In this manner, the Ottowa canoes will bereafter be loaded, when they pass along this coast, although your nation are driven away by their cruel enemies the Iroquois." The day now began to dawn fully, when be returned to his two young companions, who were still asleep. He awoke them, and exultingly bid them cook, for he had brought ahundance of meat and fish, and other viands, the gifte of the fairies.

After this display of good fortune, he bethought him of his aged father and mother, who were in exile at the Ottowa lake. To wish, and to accomplish his wish, were but the work of an instant with Maswäwë่亠ini.

One night as he lay awake, reflecting on their condition, far away from their native fields, and in exile, he resolved to visit them, and bring them back to bebold and to participate in his abundance. To a common traveller, it would be a journey of twenty or thirty days, but Masswäwc̈nnini was at their lodge hefore daylight. He found them asleep, and took them up softly in bis arms and flew away with them through the air, and brought them to his camp on the Menatolinen, ar Spirit's Islands. When they awoke, their astonishment was at its highest pitch; and was only equalled by their delight in finding themselven in their son's lodge, in their native country, and surrounded with abundence.
- Masswameinini went and built them a lodge, near the corn and wreatling plain. He then plucked some ears of the corn, and taking some of the pumpkins, brought them to his father and mother. He then told them how be had obtained the precious gift, by wrestling with a spirit in red plumes, and that there was a great abundance of it in his fields. He also told them of the precious canoe of the fairies, loaded with sacke of the most costly and valuable articles. But one thing seemed necessary to complete the happiness of his father, which he observed by seeing him repeatedly at night looking into his smoking pouch. He comprehended his meaning in a moment. "It is tobacco, my father, that you want. You shall also have this comfort in two days." "Bot where," replied the old man, "can you get it-away from all supplies, and surrounded by your enemies ?" "My enemies," he answered, " shall rapply it-I will go over to the Nedowas of the Bear totem, living 4 Penetanguishite."
The old man endeavored to dissuade him from the journey, tnowing their blood-thirsty character, hut in vain. Masswäw Einini determined immediately to go. It was now winter weather, the lake was frozen over, but he set out on the ice, and although it is forty leagues, he reached Penetangaishine the same evening. The Nadowas discerned him coming-they were amazed at the swiftuess of his motions, and thinking him somewhat supernatural, feared him, and invited him to rest in their lodges, but he thanked them, saying that he preferred making a frie near the shore. In the evening they visited him, and were anxious io know the object of his journey, at so inclement a season. He said it wan merely to get some tobacco for hir father. They immediately mede a contribution of the article and gave it to him. During the night they however laid a plot to kill him. Some of the old men rushed into his lodge, their leader crying out to him, "You are a dead man." "No, I am not," raid Masswäwënnini, "but yon are," accompanying his words with a blow of his tomahawk, which laid the Nudowe dead at his feet Another and another came, to supply the place of their fallen comrade, but he despatched them in like manner, as quickly as they came, until he bad killed six. He then took all the tobacco from their smoking ponches. By this'time, the day began to dawn, when he set out for his father's lodge, which he reached with incredible speed, and before twilight, spread out his trophies before the old man.

When spring returned, his cornfield grew up, without planting, or any care on his part, and thus the macize was introduced anong his people and their deacendants, who have ever been noted, and are at this day, for their fine cropa of this grain, and their industry in its cultivetion. It is from their cuatom of trading in this article, that this tribe are called Ottowas.

\section*{FATE OF THE RED RACE IN AMERICA:}

\section*{THE POLICY PURSUED TOWARDS THEM BY GOVERNMENT, iND THE PRESENT CONDITION OF THE TRIBES WHO GAYE REMOVED WEST OF THE MISBISSIPPI,}

The removal of the Indian Tribes within our State boundaries, to the weat of the Missisaippi, and their present condition and probable ultimate fate, have been the topic of such frequent speculation, misunderatanding, and may we not add, misrepresentation, within a few years past, both at home and abroad, that we suppose some notice of them, and particularly of the territory they occupy, and the result, thus far, of their experiment in self-government, drawn from authentic sources, may prove not unacceptable to the public.

The nomadic and hunter states of society never embraced within themselves the elements of perpetuity. They have ever existed, indeed, like a vacuum in the system of nature, which is at every moment in peril, and subject to be filled up and destroyed by the in-rushing of the surrounding element. Civilisation is that element, in relation to non-agricultural and barbaric tribes, and the only question with respect to their continuance as distinct communities bas been, how long they could resist its influence, and at what particular era this influence should change, improve, undermine, or destroy them. It is proved by history, that two essentially different states of society, with regard to art and civilisation, cannot both prosperously exist together, at the same time. The one which is in the ascendant will absorb and destroy the other. A woif and a lamb are not more antagonistical in the system of organic being, than civilisation and harbarism, in the great ethnological impulse of man's diffusion over the globe. In this impulse, barbarism may temporarily triumph, as we see it has done by many striking eramples in the history of Asia and Europe. But such triumphs have been attended with this remarkable result, that they have, in the end, reproduced the civilisation which they destroyed. Such, to quote no other example, was the effect of the prostration of the Roman type of civilisation by the warlike and predatory tribes of Northem Europe. Lettera and Christianity were both borse down, for a while, by this irreristible on-rush; but they were thereby only the core deeply implanted

\footnotetext{
- Democratic Review, 1844.
}
is the stratum of preparing civilisation; and in due time, like the gria that rols before it reproduces, sprang up with a vigor and freshness, which is calculated to be enduring, and to fill the globe.

Civilisation may be likened to an absorbent body, placed in contact with an anti-absorbent, for some of the properties of which it has strong affinities. It will draw these latter so completely out, that, to use a strong phrase, it may be said to eat them up. Civilisation is found to derive some of the means of its perfect development from letters and the arts, but it cannot permanently exist without the cultivation of the soil. It scems to have been the fundamental principle on which the species were originally created, that they should derive their sustenance and means of perpetuation from this industrial labor. Wherever agricultural tribes have placed themselves in juxtaposition to honers and erratic races, they have been found to withdraw from the latler the means of their support, by narrowing the limits of the forest and plains, upon the wild animals of which, both carnivorous and herbivorous, hanters subsist. When these have been destroyed, the grand resources of these hunters and pursuers have disappeared. Wars, the introduction of foreigo articles or habits of injurious tendency, mayaccelerate the period of their decline-a result which is still further helped forward by internal dissensions, and the want of that political foresight by which civa mations exist. But without these, and by the gradual process of the narrowing down of their hunting grounds, and the conversion of the dominions of the bow and arrow to those of the plough, 山is result must inevitably ensue. There is no principle of either permanency or prosperity in the savage slate.

It is a question of curious and philosophic intereat, however, to observe the varying and very unequal effects, which different types of civilisation have had upon the wild hordes of men with whom it has come into contact. And still more, perhaps, to trace the original efficiency, or effeminacy of the civil type, in the blood of predominating races, who have been characterized hy it. In some of the Europeas ulocks this type has remaincd nearly stationary since it reached the chivalric era. In others, it had assumed a deeply commercial tone, and confined itself greatly to the drawing forth, from the resources of new countries, those objects which invigorate trade. There is no stock, having claims to a generic nationality, in which the principle of progrese hes, from the outset, been so strongly marked, as in those hardy, brave and athletic tribes in the north of Europe, for whom the name of Teutons conveys, perhaps, a more comprehensive meaning, than the comparatively later one of Saxons. The object of this race appears continually to be, and to harc been, to do more than has previously beea done; to give diffusion and comprehension to designs of improvement, and thus, by perpetually putting forth dew efforts, on the globe, to canty
oftrin to inis higheat deating. The same impulsive appintions of the apirit of pregress, the same energetic onwardness of principle which overthren Rome, overthrew, at another period, the simple institutions of the woad-alained Britons; and, whatever other aspect it bears, we most attribute to the same national energy the modern introduction of Earopean civilisation into Asia.

When these principles come to be applied to America, and to be tested by ita native tribes, we shall clearly perceive their appropriate and distinetive effects. In South America, where the type of chivalry marked the discoverers, barbarism has lingered among the natives, without being destroyed, for three centuries In Canada, which drew its early oolonists exclusively from the feudal towns and seaports, whose inhabitants had it for a maxim, that they bad done all that was required of good citizens, when they had done all that had been previoully done, the native tribes have remained perfectly stationary. With the exception of slight changes in dress, and an absolute deprecistion in morala, they are essentially at this day what they were in the respective eras of Cartier and Champlain. In the native monarchies of Mexico and Peru, Spain overthrew the gross objects of idolalrous worship, and intercalated among these tribes the arts and some of the customs of the 16th century. With a very large proportion of the tribes but little was attempled boyond military subjugation, and lefs accomplished. The seaboard tribes received the ritual of the Romish church. Many of those in the interior, comprehending the higher ranges of the Andes and Cordilleras, remain to this day in the undisturbed practice of their ancient auperstitions and modes of subsistence. It is seen from recent discoveries, that there are vast portions of the interior of the country, unknown, unexplored and undescribed. We are just, indeed, beginning to comprebend the true character of the indigenous Indian civilisation of the era of the discovery. These remarks are sufficient to show how feebly the obligations of letters and Christianity heve been performed, with respect to the red men, by the colonists of those types of the early European civilisation, who reated themselves on feudal trnures, mlitary renown, and an ecclesingtical system of empty ceremoniea.

It was with very different plans and principles that North America was colonized. We consider the Pilgrins as the embodiment of the true ancient Teutonic type. Their Alaric and Brennus were foand in the pulpit and in the school-room. They came with high and severe potions of civil and religious liberty. It was their prime object to surtain themselves, not by conquest, but by caltivating the soil. To eacape an ecclesiastical tyrany at bome, they were willing to venture themselves in new climes. But they meant to triumph in the arts of peace. They embarked with the Bible as their shield and sword, and they laid its principles at the foondation of all their institutions, civil, literary, in-
dustrial,' and ecclesiastic. They were pious and industriots thenuedrea, and they designed to make the Indian tribes so. They bought thei hands and paid for them, and proceeded to establish friendly neighborhrods among the tribes. Religious truth, as it is declared in the Goopel, was the fundamental principle of all their acts. In its exposilion and daily use, they followed no interpretations of councila at variance with its plain import. This every one was at liberty to read.

Placed side by side with such an enlightened and parposed rece, what had the priests of the system of native rites and superstitions to expect ? There could be no compromise of rites-no partial confornity-bo giving up a part to retain the rest-as had been done in the plains of Central America, Mexico and Yucatad. No toleration of psewlo-paganian, ea had been done on the watera of the Orinoco, the Parana and the Parsguay. They must abandon the iyslem at once. The error wat grows and tolal. They must abjure it. They had mistaken darkneas for light; and they were now offered the light. They had worshipped Lucifer instead of Jmmanuel. Tbis the tribes who spread along the shores of the North Allantic were told, and nothing was beld back. They founded churches and established schools among them. They tranelated the entire Bible, and the version of David's Psalms, and the Hymns of Dr. Watts, into oue of their languages. Two types of the haman race, more fully and completely antagonistical, in all respects, never ceme in conlact on the globe. They were the alpha and onege of the ethoological chaid. If, therefure, the Red Race declined, and the white increased, it was because civilisation had more of the prisciples of endurance and progress than harbarism; because Christianity was superior to paganigm ; industry to idleness; agricultare to hanting; letter to hieroglyphics; truth to error. Here lie the true sectets of the Red Mea's decline.
There are hut three principal resuits which, we think, the civilized world could have anticipated for the race, at the era of the discovery. 1. They might be supposed to be subject to early extermination on the coasts, where they were found. A thousand things would lead to this, which need not be mentioned. Intemperance and idleness alone werr adequate causes. 2. Philenthropists and Christians might hope to reclaim them, either in their origiaal positions on the coasts, or in agricoultural communities in adjacent parts. B. Experience and forecost might indicate a third result, in which full success should attend neither of the foregoing plans, nor yet complete failure. There whe mothing, exactly, in the known history of mankind, to guide opinion. A mired condition of things wha the most probable resalt. And this, it might be anticipated, would be greatly modified by times and seasons, circumstances and localities, acting on particular tribes. Nothing leas could have been expected hut the decline and extinction of same tribe,

Whilst the remoral of othe 10 less exposed positions, would be found to tell upon their improvement. The effects of letters and Christianity would necessarily be slow; but they were effects, which the history of discovery and civilisation, in other parts of the world, proved to be effective and practical. What was this mixed condition to eventuate in ?-how long was it to continue? Were the tribes to exercise sovereign political jurisdiction over the tracts they lived on? Were they to submit to the civilized code, and if so, to the penal code only, or also to the civil? Or, if not, were they to exist by amalgamation with the European stocks, and thas contribute the elements of a new race? These, and many other questions, early arose, and were often not a little perplexing to magistrates, legislatures, and governors. It was evident the aboriginal race possessed distinctive general rights, hut these existed contemporaneousls, or intermixed with the rights of the digcoverers. How were these separate rights to be defined? How were the weak to be protected, and the strong to be restrained, at points beyond the ordinary pale of the civil law? If a red man killed a white, without the ordinary jurisdiction of the courts, could he be seized as a criminal ? And if so, were civil offences, committed without the jurisdiction of either tertitory, cogrizable in either, or neither? Could there he a supremacy within a supremacy? And what was the limit between State and United States laws? Such were among the topics entering into the Indian policy. It was altogether a mixed system, and like most mixed systems, it worked awk wardly, confusedly, and sometimes badly: Precedents were to be established for new cases, and these were perpetually subject to variation. Legislators, judges, and executive officera, were often in doubt, and it required the wisest, shrewdent, and best men io the land to resolve these doubls, and to lay down rules, or advice, for future proceeding in relation to the Red Race. It will be sufficient to bear cut the latter remark, to say, that among the sages who deemed this subject important, were a Roger Williams, a Penn, a Franklin, a Washington, a Jefferson, a Monroe, a Crawford, and a Calhoun.

It must needs have happened, that where the Saxon race went, the principles of law, justice, and freedom, must prevail. These pridciples, as they existed in England at the beginaing of the sixteenth contury, were trassferred to America, with the Cavaliera, the Pilgrims, and the Quakers, precisely, as to the two first topics, as they existed at bome. Private rights were as well secured, and public justice as well awarded here, as there. But they also brought over the aristocratic system, which wes upheld by the royal governors, who were the inmediate representatives of the crown. The doctrine was imprescriptible, that the fee of all public or unpatented lands was in the crown, and all inhabitants of the realm owed allegiance and fealty to the crown. This doctrine, when applied to the native tribes of America, left them naither
fee-simple in the soil, nor political nover \({ }^{\circ}\) pty over it. It cut them down to vassals, but, by a legal solecism, t.ey were regarded as a sort of free vassals. So long as the royal governments remained, they had the usufruct of the public domain-the right of fishing, and hunting, and planting upon it, and of doing certain other acts of occupancy; but this right ceased just as a0on, and as fast, as patents were granted, or the public exigency required the domain. The native chiefa were quieted with presents from the throne, through the local officers, and their ideas of independence and control were answered by the public councila, in which friendships were established, and the public tranquillity looked after. Private purchases were made from the outset, but the idea of a public treaty of purchase of the soil under the proprietary and royal governors, was not entertaiued before the era of William Penn.
It remained for the patriots of 1775, who set up the frame of our present government, by an appeal to arms, to award the aboriginal tribes the foll proprietary right to the soil they respectively occupied, and to guarantee to them its full and free use, until such right was relinquinhed by treaty stipulations. So far, they were acknowledged as sovereigns. This is the first step in their political exaltation, and dates, in our records, from the respective treaties of Fort Pitt, September 17, 1778, and of Fort Stanwix, of October 22, 1784. The latter was as early after the establishment of our independence, as these tribes-the Six nations, who, with the exception of the Oneidas, sided with the parent cpuntry-could be brought to listen to the terms of peace. They were followed by the Wyandots, Delawares, and Chippewas, and Ottowas, in January, 1785; by the Cherokees, in November of the same year; and by the Choctaws and Shawnees, in January, 1786. Other western nations followed in 1789; the Creeks did not treat till 1790. And from this era, the system has been continued up to the present moment. It may be affirmed, that there is not an acre of land of the public domain of the United States, sold at the land offices, from the days of General Washington, bat what has been acquired in this manner. War, in which we and they bave been frequently involved, since that period, has conveyed no territorial right. We have conquered them, on the field, not to usurp territory, but to place them in a condition to observe how much more their interests and permanent prosperity would be, and bave ever been, promoted hy the plough that the sword. And there has been a prompt recurrence, at every mutation from war to peace, punctually, to that ine sentiment embraced in the first article of the furat treaty ever made between the American government and the Indian tribes, namely, thot all offences and animosities "shall be mutually forgiven, and baried in deep oblifion, and never more be had in remembrance."

The first step to advance the aboriginal man to hia natural and just political rights, namely, the acknowledgenent of his right to the soil, we have mentioned ; but those that were to succeed it were more difficult and complex in their bearings. Congress, from the earliest traces of their action, as they appear in their journals and public acts, confined the operation of the civil code to the territory actually acquired by negotistion, and treaties duly ratified by the Senate, and proclaimed, agreeably to the Coostitution, by the President. So much of this public territory as fell within the respective State fines, fell, by the terms of our political compact, under State lazes, and the jurisdiction of the State courth; and as soon as new tracts of the Indian territory, thus within State boundarjes, were acquired, the State laws had an exact corresponding extension until the whole of such Iadian lands bad been acquired. This provided a definite and clear mode of action, and if it were sometimes the subject of doubt or confiction, such perplexity arose from the great extension of the country, its sparsely scitled condition, and the haste or ignorance of local magistrates. And these dificulties were invariably removed whenever the cases came into the Supreme Court of the United States.

Without regard to the area of the States, hut including and having respect only to the territories, and to the vast and unincorporated wilderness, called the "Indian country," Congress provided a special code of laws, and from the first, held orer this part of the Union, and holds over it now, full and complete jurisdiction. This code was designed chiefly to regulate the trade carried on at those remote points between the white and red men, to preserve the public tranquillity, and to provida for the adjudication of offences Citizens of the United States, carrying the passport, license, or authority of their government, are protected by their papers thus legally obtained; and the tribes are held answerable for their good treatment, and if violence occur, for their lives. No civil process, however, has efficacy in such positions; and there is no compulsory legal collection of dehts, were it indeed practicable, on the Indian territories. The customs and usages of the trade and intercourse, as established from early times, prevail there. These customs are chiefly founded on the patriarchal system, which was found in rogue on the settlement of the country, and they adrait of compensations and privileges founded on natural principles of equity and right. The Indian criminal code, whatever that is, also prevails thefe. The only exception to it arises from cases of Americans, maliciously killed within the "Indian country," the laws of Congress providing, that the aggressorz should be surrendered into the hands of justice, and tried by the neareat United States courts.

These preliminery facts will exhibit some of the leading featares of the mixed system alladed to. Ita workings were better calculated for
the eariy stages of eociety, while population was sparse and the two races, as bodies, kept fir apart, than for its maturer periods. As the irtervening lands became ceded, and sold, and nettled, and the tribes themselves began to put on aspects of civilisation, the discrepancies of the ayztems, and its want of homogeneounnass and harmony, became more appareat. Throughout the whole period of the administrations of Washington, and John Adams, and Jefferson, a period of twenty years, the low state of orr population, and the great extent and unreclaimed character of the public domain, left the Indians undisturbed, and no questions of mach importance occurred to tent the permanency of the aystem as regarda the welary of the Indians. Mr. Jefferson foresaw, however, the effect of encraachments beyond the Ohio, and with an enlightened regard for the race and their civilisation, prepared a new and consolidated code of all prior acts, with some salutary new provisions, which had the effect to ayatematize the trade and intercourse, and more fuliy to protect the righa of the Indians. This code served, with occasional amendments, through the succeeding administrations of Madison, Mouroe, and John Quincy Adans, jnto that of General Jackson, when, in 1834, the greatly advanced line of the frontiers, the multiplied population, and necessarily increased force of the Indian department, and the large amount of Indian donuities to be paid, called for its thorough revision, and a new genend enactment was made.

Previously, bowever, to this time, during the administration of Mr. Monroe, it was perceived that the Indian.tribes, as separate communitiea, living in, and surrounded by, people of Eluropesan descent, and gorerned by a widely different system of laws, arts, and cuatoras, could not be expected to arrive at a state of permanent prosperity while thas iocally situated. The tendency of the Sazon institutions, lews, and jurisprudence, was to sweep over them. The greater must needs ahsorb the less. And there appeared, on wise and mature reflection, so reawonable bope to the true friends of the native race, that they could sattain themselves in independency or success as foreign elements in the midst of the Slate communities. It was impossible that two syatems of governments, so diverae as the Indian and American, should co-exist on the amme territory. All history proved this. The moat rational bope of success for this race, the only one which indeed appeared practical on a scale commensurate with the object, was to remove them, with their own consent, to a position enlirely without the boundaries of the State jurisdictions, where they might assert their political sorereigray, and live and develope their true national character, under their own laws.

The impelling cause for the action of the government, daring Mr. Monroe's edministration, was the peculiar condition of certsin tribee, liping on their own original territorien, within the Slate bounderien, and
who were edverse to furlher cessions of such lerritory. The question assumed its principal interest in the State of Georgia, within which portions of the Creek and Chcrokee tribes were then living. About ten millions of acres of lands were thus io the occnpancy of these two tribeas. As the population of Georgia expanded and approached the Indian sertements, the evils of the mixed political syatem alluded to began atrongly to evince themselyes. In the progress of the dispersion of the homan race over the globe, there never was, perhaps, a more diverse legal, political, and moral amalganation attempted, than there was found to exiat, when, in this area, the desceadants from the old Saxons, north-men and Hugenots from Europe, came in contact with the descendants (we apeak of a theory) of the idle, pastoral, unphilosophic, non-inductive race of central Asia, living in the genial climate and sunny valleys of Georgia and Alabama.

The American government had embarrassed itelf by stipulating at an early day, with the State of Georgia, to extinguish the Indian title within her boundaries, at the earliest practicable period, when it could be done "peaceably and on reanonable conditions." The Indians, as they adranced in agriculture, became averse to sell. The Georgians, as they increased in numbers, became imporlunate for the territory to which they had, in this event, the reversionary right. The President was frequendly importuned by the State authorities. The Iadians were frequently brought to consider the subject, whigh was one that iocreased its importance with years.

We have deemed it proper to put this matter in its right atlitude in relation to the great question of Indian removal; and es furnishing, as it did, reasons for the early consideration and action of the government. It is not our intention to pursue the Georgia question disjunctively-we have neither tine nor space for it bere, and will only further premise, that it is susceptible of some very different views from those often premised of it." That it was one of the prominent consideralions which led the administration of Monroe to take up betimes tho general question of the Indian tribes, is well known and remembered, and apparent from a perusal of the public documents of the era.

Goverted by auch considerations, Mr. Monroe communicated a apecial mesagge to Congress on the 27th of January, 1325 , recommeading the removal of all the tribes within the States and Territories, and providing for their future "location and goverament." This is the official date and fourdation of the plan of removal, which has been \(s 0\) generally,

\footnotetext{
- We have only space to nay here, that the cession of the Georgia lands wan abbeequently made by the Lower Crests under the chieftaincy of General Milntoph, who was the first to affr bis eigoature to it For this act he paid the penalty of his
1 life; the Upper Crechs and their adherents, having ansemhled in arms, surroanded
 ed inmale.
}
and may we not add, so successfully and propitionsly to the beat interests of the tribes, carried into effect. "Being deeply impressed with the opinion," observes this venersted statesman, who has, years sinee, gove to join the patriot spirits who achieved our independence-" "that the removal of the Jodian tribes from the land which they now ocenpy , within the limits of the several States and Territorics, to the corontry lying westward and northward thereof, within our acknowledged boundaries, is of very high importance to the Union, and may be accomplished on conditions, and in a manner, to promote the interests and happiness of those tribes, the attention of the goveroment has been long drawn, with great solicitude, to the object.
"For the removal of the tribes within the limits of the State of Georgia, the motive has been peculiarly strong, arising from the compact with that State, whereby the United States are bound to extinguish the Indian title to the lands within it, whenever it may be done peaceably, and on reasonable conditions.
" In the fulgiment of this compact, I have thought that the United States should act with a generous spirit, that they should omit nothing which should comport with a liberal construction of the instrament, and likewise be in accordance with the just rights of those tribes. From the view which I have taken of the subject, I am satisfied that, in the discharge of these important duties, in regard to both the parties alluded to, the United States will have to ellounter no conflieting interests with either : on the contrary, that the removal of the tribes from the Territories wlich they inhabit, to that which was designated in the measage at the commencement of the session, which would accomplish the object for Georgia, under a well digested plan for their government and eivilisation, in a mode agreeable to themselves, would not only shield them from impending rain, but promote their welfare and happiuess. Erperience has clearly demonstrased that, in their present sate, it is imposible to incorporate them, in such masses, in any form whatever, into our sytem. It bas also domonstrated, with equal certainty, that without a timety anticipotion of, and provision against, the dangers to which they are expased, wnder caswes which it will be difficult, if not impossible, to control, their degradetion and externination will be inevitable."

We have underscored the last two sentences, because they express in forcible and just language, the experience of the American goverament, in relation to the subject, after an experiment of finy years, dating from 75, and lie, indeed, at the foundation of the present Indian policy. It is also the experience of sound and ealm observers, who have watched the operation of our laws and customs upon the isolated Indian communities in the States. Every year has exemplified the futility of ribing them up to the European standard in industry, in intelligence or character, while thus situated; nor, indeed, has it been practicables to shicld
them effectually againgt the combined effects of intemperance, personnt aloth, and of popular and valgar contumely.

Mr. Calhoun, whose report on the subject was transmitted to Con gress, with the message above named, communicates the details easential to the execution of the proposed plan. . He states the whole nomber of Indians to be removed from the States and Territories, excluding those located west and north of Lake Michigan and the Straits of St. Mary's, at 97,000 souls, who occupy about 77 millions of acres of land. The country proposed for their location is that atretching irmmediately west, beyond the boundaries of the States of Masoun and Agicansas, having the River Arkansas ruaning through its centre from west to east, the Missouri and Red rivers respectively as the northern boundary, and the vast grassy plains east of the Rocky Mountains, as its western limit.

The map which we publigh of thid territory, is drawn on the basis of one which was published by Congress in 1834, in illustration of the report of the committee on Indian affairs of May 30th of that session. It erobraces all the locations of tribes to that period.

The plan proposed the gratuitous grant of the country to the respective tribes, and their removal to it at goverament expense. It embraces the transference to it, of their schools established by religions societies, and mpported, in part, by the civilisation fund, and all their means of moral and religious culture. It is based on the pursuit of agriculture, the mechanic arts, and the raising of catle and stock. It invests the tribes with full power of making and executing all their laws and regulations, civil and criminal. It stipulates military protection, to keep the sarrounding tribes at peace. It leaves them their political sovereignty; being without the boundary of the States, under their own chiefs and local governors, with mach aids aq are necesory to enable the various tribes to amociate and set up the frame of an associated gavernment to be maneged by themselves, and as subsequenly proposed in Congrew, to be represented in that body whenever the syotem ahall be perfected \(s 0\) as to jastify this measure. It proposed, as the basis of removel, s molemn act of Congress, guaranteeing the country to them, and excloding its future incorporation into the States. A eecond loeation, in the northern latitudes, was proposed for the Indians west of Michigan, where further body of \(\mathbf{3 2 , 2 6 6}\) souls were eatimated to reside.

Such were the general principles of Mr. Monroe's plan, subbnitied in 1805, and subeequently adopted by Congress, in its essential features. It has now been in operation riciterer years, and it is proposed, in bringing this paper to a close, briefly to examine the coodition and prospects of the expatriated tribea, in the conntry to which they have boan tenasterred.

By a report from the proper depertment, trangitted to Congrese with
the President's message in 1836, the result of the first ten years' experiment is shown to have been the actual migration of 40,000 from their origioal seats, east, to the allotted Indian territory, west of the Mississippi. Of this number, 18,000 were Creeks, 15,000 Choctuws, 6,000 Cherokees, 2,000 Chippewas, Oitawas, and Pottowattomies, 1,300 Shawnees, 800 Delawares, 500 Quapaws, 400 Seminoles, 600 Kickupoos, 400 Senecas, and an average of, say 250 each, of Appalacbicolan, Weas, Piankashaws, Peorias and Kaskaskias. In this atatement, small tractions over or under, are omitted. A location and permanent home has been provided for seventeen tribes and parts of tribes; a number which, in the succeeding seren years, we speak from documents before us, bas been largely augmented. The whole body' of the Cherokees, of the Creeks, or Muscogees, of the Cbickasaws and Choctams, \& 8 , and also, with the exception of one principal band, of the Seminoles, have been removed. Portions of other tribes, not then full, have joined their kindred; and some whole tribes, who had not before come into the arrangement, and ceded their lands east, as the Miamas of the Wabash, and the Wyandots of Sarduskey, have since accepted locations in the Indian territory. The Chiclossaws are all located with their affliated conntrymen, the Choctaws; and numbers of the ancient Iroquois confederacy, the Six Nations of New York, as well as the ancient Mobegans and Munsees, have, within a few years, selected locations sonth of the Missouri. The eatire number of red men now concentrated on thowe plains and valleys, where winter scarcely exerts soy severity of power, may be set down at 77,000 souls, leaviag, from the official report of 1841, hut 21,774 of the original estimated number of 1825 , to be removed; exclurive of those weat of the streits of Michilimachinac and SL Mary's.
From the documenta accompanying the annual report transmitted to Congress by the President, in December, 1840, the amount of funde invested by the government in stocks, for the Indians, was \(\$ 2,580,000\), on which the ennual interest paid to them was \(\$ 131,05\). Twenty-foar of the tribes had permadently appropriated, hy treaty, \(\$ 00,730\) per annum, for the parpose of education. The number of achools maintmined, and the number of pupils actually laught, are not furnished. It is gratifying to know, from this source, that civilisation, agriculture, and the mechanic arts, are making a rapid progress, nnd that education and Christianity are walking hand-in-hand. Planting and raising cattle are adopted generally. Portions of the moot advanced tribes have devoted themselves to the mechanic arts, sapplying themselves, to a limited extont, with amiths, wheelwrights, carpenters, and joiners, and some other branches. Spinging and hand-loom weaving are practised to some extent. There are native merchanta, among the three principal sonthern tribes, who ship their own cotton and other producta to mariset, and sap-
ply their people, in return, with sach products of the Fast and West Indies, and other parts of the world, as they require. A large part of the contracts, particularly for Indian corn, required to subsist the United States troops in that quarter of the Union, is farnished by native contractors. Their legislation is performed in representative councils, and is well adapted to the actual and advancing state of society. Many of their leading ned are well educated; some of them classically; and the general mora! and intellectual tooe and habits of the tribcs, are cleariy and strikiogly on the advance. It requires, it is believed, but time and perseverance in civil associations, to lead them to the same results arrived at by other barbarous nations, and to demonstrate to them the value and importance of a general political confederation, founded on the principles of equal rights and equal representation, supported by publio virtue and intelligence.

Having sketched the cause of the decline of tbat portion of the North American Indians, who were seated along the Atlantic, and the plan proposed for cbecking it, we shall now, with the map and documentary evidence before us, devote a few moments to the present condition and prospects of the more prominent tribes.
1. The Choctaws, beginning at the extreme south of the teritory, are the first in position. They occupy the country above the State of Arkansas, extending from the Arkansas to the Red river, following up the Canadian branch of the former, comprising an area of about 100 milea in breadth, hy 200 in length. They are bounded by Texas south-west. The country is well adapted for grain and the raising of stock, in its middle and northern parts, and for cotton on the south. Many of the natives bave large fields, where, but a few years since, the forest was untouched. Sew mills, grist mills, and cotton gins, are either erecting or erected throughout the country. Salt is manufactured by an intelli-gent Choctaw. Iron ore has been found, and apecimens of gold have been picked up in various places.

This tribe is governed by a written constitution and laws. Their territory is divided into three districts, each of which elects, once in four years, a ruling chief, and ten representatives. The geperal council, thus constituted, and consisting of thirty councillora, meets annually, on the first Monday in October. Voters must be Cboclaws, of age, and residents of the districts. The three chiefs have a joint veto power on all laws passed; hut two-thirdy of the council may re-pass them after such rejection.

The coancil of thity appoint their own speaker and clerk, and leeop - journal. They meet in a large and commodious council-house, fitted up with seata for members and spectators, and committee rooms. Their eessions are, usually, about ten days in duration. They are paid two doilera per diem for their mervices, out of poblic funds.

In addition to this evidence of capacity for self-government, there are judicial districts established, the right of trial by jury is secured, and there is an appeal to the highest tribunal. All the males, of a special age, are subject to do military duty : for this purposs the territory is sabdivided into thirty two captaincies, the whole being pleced under the orders of a general. The council bas passed many good and wholesome laws; among them, one against internperance and the sale of ardent spirits. The collection of debts is at present not compulsory, being regulated by questions of credit, punctuality, and honor, which are to be adjusted between the buyer and seller. The country is too sparsely settled, and the popular odium agrinst incarceration too strong, to permit a resort to it. Thus, it will be seen, this tribe exbibit in their frame of government the elements of a representative republic, no a pure democracy, with perbaps sufficient conservative power to goand against sudden popular effervescence.

The Choctaws have twelve public schools, established by treaty stipulations with the United States. There are several missionaries amongst them, of the Preshyterian and Metbodist denominations, whose labors are reported by the public agents to be beneficial, and calcalated to advance their condition. There are four public blacksmith shopa, two of which are exclusively worked by the natives. The atrikera, or assistants, at ell the ahops, are natives. Shops have also been erected, in various parts of the astion, which are occupied only in the apring and nummer, in planting and crop time. The mechanica in these are natives, who are paid, not by the individuals requiring aid, but out of public fands. The nation has an academy located in Scott county, Kentucky, at which 125 students were taught in 1839 and 1840. This inslitation in nuw in the process of being eatablighed in their own territory. This tribe we learn by the Secretary of War's report, appropriated \(\$ 18,000\) of their annuities, in 1843, to educational purposes.
2. Chickasaws. This tribe is of the same lineage as the Choctaws; and, by a compact with the intter, they occupy the same territory, and live intermixed with them. It constitates a part of this compact, that the Chickasaws are to concentrate their population, and form a fourth election district, which shall be entilled to elect ten representatives, and three senatorial chiefs, to the national Council. The aggregate amount of the veated funds of this tribe, in 1840 , was \(\$ 515,23044\); of which \(\$ 146,000\) is devoted to orphans. The annaal intereat paid by the govcroment is \(\$ 27,06383\). They paricipate equally in the adrantugen of the Cboctaw academy, and have had many of their youlh educuted at that institution.
3. Next, in geographical position, to the unitod Chootewne and Chickcawa, are the Muskogees, who are more generally known under tho maone of Orake. They occupy a territary one hundred and fifty milen
in length, by ninety in breadth. Thery are boanded on the soath by the Canadian fork of the Arkansas, and by the district of the Seminoles, which lies between the main branch of this stream and its north fork. Their territory reaches to a point opposite the junction of the Neosho, . and is protracted thence north to the Cherokee boundary. It is a rich tract, well adapted to the growth of corn, vegetables, and eaculents, aod the rasing of stock. It is not as abundently watered by runoing otreama as some of the tracts, or rather, it is a characteristic of its straller atreams that they ran dry, or stand in pools, during the latter part of summer. In place of these, it has some good springs. The main and the north fort of the Canadian are exemptions from the effects of summer drouth. In point of zalubrity, the country is not inferior to other portions of the Indian territory.

The government of the Creeks is still easeatially the same which they exercised on the banks of the Chattahoochee and the plains of Georgia. They exist in chieflainships, each head of which has his own local juriodiction, civil and criminal. Each ruling chief has his village and his adherents; and the condition of things partakes of what we shall be underatood by desigating feadal trails. They have no written constitution; their laws are, however, now reduced in part to writing. General councils, or conventions, not exact in the period of their occurrence, consider and decide all general questions. At these, the chieftainshipg are all eatitled to representation. Local questions, of right and police, come before the local chiefs, and are settled according to usage. They adhere to the original mode of working conmon or town fields, at which it is the duty of all to assist, both in the original clearing and in the annual labor of planting and reaping. There are also individuals, possessing slaves, who manage pretty extensive plantations. More cord is raised by this tribe than by any other now located West. Over and above their own wants, they have for several years had a large amount for sale and exportation. Less attention has been paid to the raising of atock, for which, indeed, the country has been deemed less propitious; hut this hranch of industry bas of late years attracted more attention.

The Creeks had, for many years prior to their removal, been divided into upper and lower totons-a distioction which has been transferred to the Weat. Opothleyoholo is the chief of the Upper, and Roly McIntogh of the Lower Creeks. These two chieflainships embrace the lesser ones, and divide the nation into two paries. It was the Lower towns, headed by the father of the present chief (whose tragic death we have mentioned), that ceded the Georgian territory, and thus sided in the policy of that State. The condition in which this tribe existed, in portions of Georgia, Alabama, and Mississippi, was, in other respects, peculiar. In emerging, as they were well in the process of doing, from the
heater to the agricullural state, the ingtitution of alavery, hy which they were surrounded, and in which they participated, gave a peculiar development to their industry. Chiefs, who were averse to wort themselves, employed slaves, and thus the relation of plapter and slave was established long before the question of their removal occurred. The effects of this were to exalt a portion of the nation above, and to deprea others below, the average standing. The disparity which took place in laborious habits and in wealth, also impressed itself on edacation, dress, manners, and information generaliy. Although the idea of slavery was well known to the red race from the earliest times, and they all have a word for it, in their native vocabularies, and practised it on their prisoners, yet the result we are considering was accelerated by an admixture of European blood in their chiefains. Hence it is that this tribe, and one or two others in the south, have for years been able to put forth intelligent chiefs to transact their public business, who have astonished the circles at Washington. Yet, if they were followed to the huts of the common people, at home, there was a degree of igoorance and barbarity, even below the standard of our leading northern tribes. Two kinds of testimony, respecting the condition of the southetm tribes, both very different, and both true, could therefore be given.

The Creeks came west, soured and disappointed, and hut little disposed for the effort before them. They had suffered in various ways, and they bad left the southern slopes and sunuy valleys of the southert Alleganies with "a longing, lingering look." They had never manifested a general íterest in schools, and none whatever in religion. The latter is still the prevalent feeling. It is believed there is not a missionary bow tolerated among them. There is a more friendly feeling towards education. Neither had they made much advance in mechanic arts. The chiefs were too proud, the common people 100 indolent, to learn the use of the saw or the hammer. Some change, in this respect, ia thought to have ensued. Mechanics are employed for their benefit and at their charges, hy the government, which must introduce the elements of mechanical industry. They dress in a rather gaudy, but picturesque manger. They live in comiortable houses of squared or scored logs, fitted up with useful articles of furniture, and they employ beants of burthen and of pleasure. It is the evidence of the government agents, that the signs of advancing thrift and industry are among them. Time alone, it is believed, is necessary, with a perseverance in present efforts, to carry them onwards to civilisation and prosperity.*
4. Seminoles. This tribe is of the language and lineage of the Creeks. They are appropriately placed on a tract within the general
- This tribe has, the past year (1843), passed a law expelling all white men Fho play at eards, from the limite of the nation, whether they have ladian wives or not. "
ares of the latter, boonded on the south by the Canadian fort of the Arkenseas, and by the lands of the Choclaws and Chickasaws. The tract has an extent of seventy miles from east to weat, and is fully adequate to their wants. A blacksmith's sbop is maintained for them; they are furnished with agricultural iuplements, and bave been grataitously subaisted, as olber tribes, one year, at the public expense. It is thought to be unfavorable to their progress, that they bave been allowed to migrate with their slayes, who are averse to labor and erert a partlysing influence on their industry. This tribe is far bebind the other southern tribes in civilisation and manners. They occupied, while in Florida, a region truty tropical in its climate, and which yielded spontaneously no unimportant part of their subsistence, in the arrowroot and in sea fish. Their chief product thus far, in the weat, has been corn, They live under the authority of local chiefs, who, as in all their past hiatory, erercise influence in proportion to their talents and courage. Their withdrawal from scenes and situations which served as nurseries of idle, savage habits, and their association with the other leading tribes, who are now bent on supporting themselves exclusively by egriculture, have been favorable. They have beed at peace since their arrival on the waters of the Arkansas; and it is anticipated that they will, by example and emulation, assimilate themselves in industry with the preexisting tribes. It has already been demonstrated that they will surs tain themselves in their oew field of labor. But few of their nambers -from the last accounts not exceeding \(100^{\circ}\)-now remain in Florida.
5. Cherokees. This tribe is prominent arnong the native stocks in the United States, and is foremost in the efforts it has made to take rank among civilized nations. In this effort it has passed through some eevere and tragic ordeals from internal dissensions, from which it would eeem, that in proportion as the prize is brought within their grasp, are the trials multiplied which Jelay its seizure. And, notwithstanding its strong claims to consideration on this head, they bave, it must be admitted, much to attain. The original position of the Cherokees, in the valleys and the westert spurs of the Alleganies, and remote from the disturbing canses which agitated the otber tribes, was highly favorable to their increase and adrance. No tribe in North America hed remained so completely uodisturbed, hy red or white men, up to the year 1836. They were early, and to a considerable extent, cultivetors; and whatever they were in ancient times, they have been a nation at peace, for a long period. Soon efter the close of the late war of 1812, a portion of this tribe went over the Mississippi, and, by a compact with government, placed themselves between the waters of the White river and the Arkansas. This advance formed the nuelena

\footnotetext{
- Becretary of War's report, 1843.
}
of that political party, who have mingled in their recent mesembises under the name of Western Cherokees, and who deemed themselvet to be entitled to some rights and considerations above the Eactern Cherokees. The principal dissensons, however, grev out of the queation of the cesion of the territory enst of the Misaissippi. This Tas a broad question of aste or no sale, exigration or mon-emagration. At the head of the affimative party was Ridge; at the head of the Degative, Ross. The latter, in addition to bis being the leading chief and most prominent man, was in a large majority, and, for a lime, maccessfully resisted the measare. The former drew a namber of the best educated chiefs and men to his side. Arailing himseif of the temporary absence of his antagonist, Ross, from the coantry, he coded the conntry, and sealed the fate of bis tribe east of the Mirsiasippi. It was a minority treaty, but the consideration was ample; it secured large prospective adrantages, besidea a large and rich domain in the West. It was, therefore, sustained by the government ; the U.S. Senate ratified it, adding some farther immunities and further compensttion, at the instance of Ross. The tribe wed removed, but it went west with a deadly fend. In the end, Ridge, like Mclatosh, paid for his temerity with his life. A representative government was set up, consisting of a hoose of delegates or representatives, annually chosen by districts; a sebatorial council, with powers of revision or co-action, and an oxecutive elective head. A code of laws has been adopted, and a judiciary created to carry them iuto effect. This systern, which has been in operation somse six or seven years, has been fornd adequate to nostain itself through scenes of severe trial; and it mast be regarded a ons which, modified as it may be, is destived to endure.

The territory of the Cherokees is between that of the Creeks and Oages. It is ample heyond their wanta, fertile, and geneally well Fatered. The Arkansas crosses it centrally; it has the Neosho and the State of Arkansas as its eastern bonndary. It is well adspted to the cereal grains. Corn, wheat and oata succeed well, together with meloss and culiaary vegetables of all descriptions. The Cherskees have been long accustomed to husbandry. They own large stocks of hornea, cattle, hogs and sheep. They occupy substantial and comfortable houses. Many of their females spin and weave, and rumbers of their people are clothed in their own manufactures, Well improved firms extand through their settlements. A number of their merebanta are natives, who buy and sell produce, and import foreign merchandige. Heading and writing are common attaibinents. They heve schools and churches. They have mille for grinding grain. They manufactore salt to a limited extent. The country yields atone coal and gypsum. The prairiet, which ere interapersed through the tract, yield \& fire number range for cattle, and produce a species of grass, which, when propdry
oured, is little inferior to timothy. With e country which has the the alements of proaperity in itself, and an intelligent and inchustrioss poporletion, thin tribe must, ere long, present the gratifying spectacle of a civilized race.
6. The Osages. This tribe is indigenoas, and formerly owned a large part of the territory which is now assigned to others. Their habita and condition have been, however, but litlle benefited ty the use which they have made of their annuities. Great exertions bave been made by the local agenta to induce them to give ap their erratic mode of life, and become agriculturists. To this end stock and agricultaral implemente have been furnished them; and other facilities given, bat without any general effects. Among these may be named the building of mills, and the erection of well built cabins for their chiefs. There is no tribe to which the term predatory may be so appropriately applied as to the Osages. They have, from an early day, been plunderers on that frontier, among red and white men. Poasessing a large territory, formerly well supplied with the deer, elk and buffalo, powerful in numbers, conrageous in spint, and enjoying one of the finest climates, these early predatory habits have been transmitted to the present day. They are loth to relinquish this wild license of the prairies-the so-called freedom of the roving Indian. But it is a species of treedom which the eettlement of Missouri and Arkansas, and the in-gathering of the semicivilized tribes from the sonth and the prorth, has greatly restricted. Game has become comparatively scarce. The day of the banter is well nigh past in those longitudes. When to this is added the example of the expatriated lodians, in tillage and grazing, their field laborn in fancing and erecting bouses, their improved modea of dress, their achools, and their advanced state of goverament and laws, the hope may be indulged that the Osages will also be atimulated to enter for the prize of civilisation.

Suoh are the six principal tribes who form the nuclens, or, to nse s military phrase, the right wing of the expatriated aboriginal popalation, as the bands are arranged in their order from south to north, in the tron-Ozark or Indian territory. It would afford us pleasure to devote some separate considerations to each of the remaining nineteen tribes and half triben, or remnants and pioneers of tribes, who make up this impoeing and intereating colony, where, for the firat time aince the settlement of the Continent, the Iedian race is presented in an independent, compact, and prosperous condition. But it would maniferly entead this article beyond its juat limits, and we mnat therefore generalize our romaining nolices.

We stid, however, adhere to a geographical method. The Senecaa from Sanduaty, and the mixed Senecas and Shawnees, are nitagted northeast of the Cherokees, and between the latter and the western
boundary of Missonri. They possess a hundred thousand ecres of choice lenda. The Sanduskies number 251 soula ; the mixed band, 222 . They are represented as farmers and atock-raisers, frugal, industrious, and leas addicted to intemperance than their neighbors. They caltivated, in 1839, from two hundred and fifty to three hundred acrea of corn. They have a blacksmith's shop, under treaty stipulations, and possess good mocks of borsea, eattle, and hogs. The Quapaws adjoin the Senecas and Shamuees on the north, and, as the latter, have their lands fronting on the Neosho. This band farmerly owned and ceded the south banks of the Arkasaas from its mouth as high as the Canadian fork. They are indolent, much addicted to the use of ardent spirits, and depressed is numbera. They bave a tract of 96,000 acres. They cultivate, generolly, about one hundred acrea of corn, in a slovenly manner. Part of their numbers are seated on the waters of Red River, and the Indian predilection for rowing is nourished ty the frequent habit of passing to and fro. This erratic habit is an unerring teat of the hunter slate.

The Piankashaws and Weas are of the Miami stock, and came from the walers of the Wabash. They are located on 255 sections, jmmediatoly west of the western boandary of Missouri, and about 40 miles sonth of the Konza. Their population is 384, of which 222 are Weas. Immediately west of them are the Peorias and Kaskaskias of the Illinoias facrily. They number 132, and possess 180 sections, which given an average of more than a square mile to each soul. Still west of these, are the Ottowas of Ohio, about 200 win number, and above them, a small band of 61 of the Chippewas of Swan Creek and Black Fiver in Michigin. These localions are all on the sources of the Osage fiver. The landa are fine, partly woods and partly prairie, and are easily cultivated. These six fragmentary bands are not dissimilar in their habits of living and the state of their advance in agriculture. They subsist themselres by raising corn and cattle and hogs. They evince an advancing condtion, and are surrounded by circumstances eminently favorable to it.

The Shawnees are placed at the junction of the Konza with the Missoari, extending south and west. They number a little short of 1500 , and own a territory of ten thousand square miles, or \(6,400,000\) acres. They are coltivators and graziers in an advanced etate of improvement Hunting may be occasionally resorted to as a sport or amusement, but it has, years since, been abandoned as a source of subsistence. Indeed, the failure of the game in that region would have rendered the lafter imperative, had not their improved habits of industry led to it. This tribe have essentially conquered their aversion to labor. They drive oxen and horses trained to the plough. They aplit rails and build fences. They erect substantial cabins and barns. They have old corn in their cribe from year to year. They own good saddle-horven and saddlea, and
ther articlea of caparison, and a traveller or vinitor will find a good meal, a clean bed, and kind trealment in their settlements.

Next in pasition to the Shawneas are the Delawaren, the descendants of the ancient Lenno Lenapees of Pennsylvadia. Allies and kindred in their ancient posilion, they are atill in juxtapoaition in their new. Their tract begins at the junction of the Konza and Mimouri on the north, and afler ranning up the former to the Konza reserve, exteds north and west so ts to embrace it on the north. It conteing about 2450 square miles, or \(2,208,000\) acres. They number, at the last dates to which we have referred, 626 souls, and are on the increase. In point of habita, induatry, and improvement, they are perhape not inferior to any of the northern stocks. Shielded from intemperance by their position, out of the Slate limita, where they are exclusively under the influonce and protection of Congress laws, this tribe, together with the entire circle of Indian communities on that frontier, has been for some yenrs in a favourable position for recovering and developing their true energiea. They have, within a few years, received into their protection a amall band (182) of the Moncays, and a smaller one, of 74, of the Stockbridgea : the latter, we need bardly inform the intelligent reader, are descendenta of the ancient Mobegans, and the former of the Minsi and Minnisinke, who, at the ere of the colonization of "Nova Belgica" and New York, were respectively located on the east and the west banks of the Hudson. The Stockbridges are civilized; the Munsees leas so, but industrious. Both are poor, and without funda.

Ithmediately succeediag the Delawares are the Kickapoos, an erratic race, who, onder various names, in connection with the Foxes and Saca, have, in good keeping with one of their many names," alipped over balf the continent, to the manifest disoomfort of both German and American philologists and ethnographers, who, in searching for the so-called " Mascotina," have followed, so far as their results are concerned, an ignis fatum. The Kickapoos have 12,000 equare miles, or 768,000 acres. It is a choice, rich tract, and they are disposed, with the example of the Delewares and Sbawnees, to profit by it. They raise corn and catule, hoges and horses, and are prosperous. Their numbers, in 1840, were 470. There is a tract of 200 square miles, on the Grest and Little Namaha, assigbed to the metifs, or descendants of mixed blood, of the Iowas, Otoes, and Missouris. These separate the removed and semicivilized tribes, south and west of the Missouri, from the wild indige-nes-we mean the Otoes, the Pawnees, the Orahaws, and the Siour, who extend over vast tracts, and exist without any sengible improvement in their condition. The aame remark may be applied to the Kon2n, who are, however, bemmed in between the Delawares and the

Shawnoes, except on their western borders. It is to part of our porpane to conaider these tribes, an, over and above the inflaence of contiguona examples, they constitute no part of the evidence affecting the general question of the plan of removal.

That this evidence, as now briefty sketched, is fiverable, and indeed highly favorable, to the geoeral condition and proaperity of the removed tribes, is, we apprebend, clearly manifest. Not only have they been placed beyond the wasting influence of causes which oppressed them, within the circle of the Stale commanities; but they have rectived in exchange for their eastern lands, a territory which, as a whole, is highly fertile and saluhrious. It is a tertitory which has required little camparative labor to cultivate, made up as it is of mixed forests and prairies. It is also, viewed in extenso, well watered, having those noble streams, the Red River, the Arkansas, the Konza, the Platte, and the Missonri, with their tributaries, running through it. The range which it affords for cattle and atock, and the abondance of wild hay, of a nutritious quality, has proved very favorable to an incipient agricultoral population, and greatly mitigated the ordinary labors of finming in northers climates. There are no latitudes in North America more favorable to the growth of corn. The cotton plant has been introduced by the Choctaws and Chickasaws, on the banks of Red river. It is a region aboonding in salt springs and gypsum beds, both which must hereafter be folly developed, and will prove highly advantageous. It is above the finst or principal rapids of the great atreams running down the platean of the Rocky Moantains, and consequently affords sites for water-mille, which are scarco and almoot unknown on the lower Arkansus. There is, indeed, a combination of circumstances, which are calculated to fivor the General Government plan, and foster the Indians in a general attempt at civilisation and self-government. And we look with interest, and not withoot anxiety, at the result of the experiment.
We are aware that there are trials before them, arising from great diversity of feelings and opinions, and states of civilisation. Some of the tribes are powerful, advanced, and wealthy; some feeble and poor. Education has very unequally affected them. Laws are in their embryo state. Tbe Gospel has been but partially introduced. In clothing the native councils with some of the powers of a congress, and regulating their action by constitutional fixity, there is great care and deliberation required, not, at orce, to grasp too much. There is perhaps yet greatet danger in enlarging the anthority of the chiefs and sagamores into something lite presidential dimensions. The natives have great powers of imitation; and it is to be feared that they will content themselves by imitating things which they do not fully understand or appreciste. The national character of the Indians is eminently suspicious. There is a foar to truat others, even themselves. Delegated power is narrowly
watched, and often begradged when given. The acta of their pablic men are uniformly impugned. The thought seems hardly to be entertained by the common Indians, that an officer may be guided by righs and bonest motives. The principle of suspicion has, so to say, eaten out the Indian heart. The jealousy with which be has watched the white man, in all periods of his history, ia but of a piece with that with which he wetches his chiefa, his neighbors, and bis very family. Exaltation of feeling, liberality of sentiment, justness of reasoning, a spirit of concesaion, and that noble faith and trust which arise from purity and virtue, are the characteristics of civilisation; and we should not be disappointed if they do not, all at once, grow and flourish in these nagcent communities. Still, our hopes predominate over our fears. Where so much has been accomplished as we see by the Cherokees, the Choctaws, and Chickasaws, and oar most adranced northern tribes, we expect mare. From the tree that bears bloseoms, we expect fruit.

We have no expectation, however, that without some principles of general political association, the tribes can permanently adrance. To assume the character and receive the respect of a commonwealth, they mart have the political bonds of a commonwealth. Our Indian tribes have never possessed any of these bonds. They are indeed the apparent remnants of old races, which have leen shivered tnto fragments, and never found the capacity to re-unite. The conslant tendency of all thinger in a gtate of nature, has been to divide. The very immensity of the continent, its varied fertility and resources, and its grand and wild featurea, led to this. Hitherto, the removed tribes in the West have opposed an anociated government. They hove stoutly and eifectually resisted and rejected thia part of the government scheme. They fear, the agents say, it is some plan to bring them under the civil yoke. Time, reflection, and education must tend to correct this. More than all, their civi dissensions must tend to show the necessity of a more enlarged and general frame of government, in which some individual rights mant be yielded to the public, to secure the enjoyment of the rest. We think there is some evidence of the acknowledgment of this want, in their occasional general councila, at which all the tribes have been invited to be present. During the last year (1843) such a convocation was held at Tehlequah, the seat of the Cherokee government. At this, there were delegatea present from the Creeks, Chickasaws, Delawares, Shawnees, Piankn. shaws, Weas, Osages, Senecas, Stockbridges, Otowas, Chippewa, Pearias, Potiowatomies, and Seminoles. The result of these deliberstions, we are informed, was a compact in which it was agreed:-
1. To maintan peace end friendghip anoong each other.
2. To abstaid from the law of retaliation for offences.
3. To provide for improvements in agriculture, the arts, and mavofrotares.
4. To prowide against any cession of their territory, in any form.
5. To punish crimes, committed by one tribe, in the bounds of snother.
6. To provide for a general citizenship among the contracting parties.
7. To suppress the use or introduction of ardent spirits.

These are very mixed principles, coutaining no basis of a government; yet, futile as they are, we apprehend they contain no effective power for their enforcement. A law without a penalty is like a rope of sand. Any of these parties might nullify either of these acts, by neglecting to enforce it. It is, we apprehend, the mere expression of the popular will, in a conncil, without any binding obligation of the whole, or a majority of the tribes, to compel obedience from, the delinquent members. It may, however, lead to further deliberations; and we cannot but regard the movement as one which betokens political forethought and purpose.
Our greatest apprehensions, we must confess, before closing this paper, arise from the peculiar geographical position of the Indian territory with relation to our own. And this could not, perhaps, have been anticipated twenty yeara ago, when the plan was formed. Our population is on the broad move west. Nothing, it is evident, will now repress them this side of the Pacific. The snowy heights of the Rocky Mountains are already scaled; and we but apply the results of the past to the futare, in saying that the path which has been trod by a few, will be trod by many. Now, the removed tribes are precisely in the centre of this path. From the mouth of the Platte, or the Konza, the great highway to the Oregon must ran weet. Whether this new tide of emigration will be succesafal or unsuccessful, will those who compose it spare to trample on the red man? Will they suddenly become kind to him, to whom they have been unkind? Will they cease to desire the lands which their children want? Will they consent to see the nation separated by an indian state? Will they award honons, nay, justice, to that atate? Twenty years will answer these questions.

Choctaws.-An appropriation of \(\$ 113,000\) has been made by Congress for the removal and subsistence of the Choctaws now in Mississippi. There are upwards of six thousand in our state, comprising about eleven hundred families. These are under Colonels Johnson and Fisber. The half of the money due the Indians, and to be paid alter their landing in their new homes in the West, is to be funded. This will effectually prevent all speculation, and enable the Indians to obtain and hold what is due them. Those now in the state are guarded againat all coarcive measures for their remoral, and left free to go Weast or remain in their bomes in Mississippi.-Sowthan Reformer.

\section*{Value of indian property in michigan.}

Micuilimaciinac, Nov. 28th, 1837.
Judar McDonald and Captain Clark, appraisers under the Sth article of the treaty with the Ottowas and Chippewas of March 28th, 1636, presented their report of the appraisement of Indian improvements, between Grand River and this place, made during the summer and autumn. The abstract indicates the following facta:

Whole number of improvements, 485.
Number of villages, 22.
Nunber of houses of all classes, wood, log, and bark, 609.
Aggregate value of houres, \(\$ 23,310\).
Number of acres cultivated, 2,477 , valued at \(\$ 17,423\).
Number of acres improved, at prior periods, but now lying wate, \(\mathbf{6 , 0 9 8}\).
Value of the waste lands, thus improved, \(\$ 18,344\).
Number of apple trees, 3,212 , valued at \(\$ 5,161\).
Number of mills and baros, 4 , valued at \(\$ 2,100\).
Number of churches, 10 , valued at \(\$ 2,600\).
Total valuation of improvements, \(\$ 74,99800\).
Total population of the 22 villages, \&e., 3,257 souls.

Whre \(^{2}\) the foundation of the flag-staff of the old French fort at \(\mathrm{O}_{3}\) wego was removed, during the recent improvements-say 1836 to ' 40 , there was found at the bottom, a flat piece of sandstone, with this inscription :

GLIUNA. 1727.
This was the actual date, as found by historical reference, of the first fort built at Oawego. The above fact was communicated to me in 1842, during a visit to the place, by Mr. McNeil, the engineer employed in opening the streeta, at the time named. He showed me the atone, with the ingcription. Was Gluuta a geographical name ?

Sakdebey.-This word is of Wyandot origin. It is derived, according to William Walker, from San-doos-tee, and means, "at the cold water." The terms, Upper and Lower Cold Water, were descriptive names, of long standing, for the two plack, on Sandusky bay, now called Upper and Lower Sandunky.

Death of Gen. Willay Clabr.-It is with great regret that we ennounce the decense of this veteran. He expired in St. Louis on the lat inslant, aged about seventy years, having been gradually declining ander the operation of age and disease for the last two or three years. Few men in the Northwest were more generally known, or more sincerely reapected, than General Clahy. He had been prominently and constantly before the public for more than thirty years, and it is believed his integrity and honor were never impeached. When but serenteen jeans of age, he accompabied his brother, General Grorge Rogens Clate, in his celebrated and daring expedition acrass Illinois ; and es early as 1790 was in the service of the Government es confidential Indian agent. His connection with the Indians, in various capacilies, continued till bis death, at which time he was Superintendent of Indian Affairs at St. Loxis. For many years, and up to the period when Missouri became a State, ho was Governor of the Terrilory. In conjunction with Captain Merrawithis Lewis, he performed the celebrated journey to the mouth of the Columbia River, and was cossequently one of the first of our citisens that ever crossed the Rockry Mountains. No white man ever pooseased as much influence with the Northwestern Indians, by whom the was universally respected and confided in. In his death the Indien Dopartment has sustained a loss which can scarcely be repaired, and with him perished a fund of information, in regard to our relations with the aborigines, which can never be supplied from any other source.-Giobe, Sopt. 15th, 1838.

Whesling.-This terta is derived from the local form of the Delaware word for the human head, weeting, that is to say, Place of the head. Its origin was this : a white man haring heen killed by the Indians at the mouth of the creek, now called Wheeling, which enters the Ohio at this place, his head was set up on a pole, in tervorem to the emigrants. Head, in Delaware is coel, or as it is written, according to the foreign system of rowel sounds, wil.

Claferace.-This is not an Indian name. It is derived from the Dutch word clove, a gorge, or side valley, and rack, a reach of the river. This cbaracter of the east banks of the Hudson, is observable at Hudson, the ofd Claverack landing-where prominent points of land and inletr or bays of water give a serrated appearance to the shore. In early Dutch days, the skippers had divided the whole river into racke, or reaches, giving each a distinctive name, as appears by ancient maps.

[^9]:    Hn giving the particle wa, the various meanings of "fliting," "waving," and "dancing," the Indian idiom is fully prewerved. The final particle eed, in the torm Fite tai see, is from the generic rool abee, meaning a lifing creature, or created form, Dof man By prefixing $A$ hw to the root, we have the whole elase of quadrapeds, and by pen, the whole clas of birtis, \&cc. The Odjibwa Algonquin term for a candle, wis . Loon ain je gun, is literally rendered from its elements-" bright-white-flamedinstrament." It is by the very concrete character of these compounds that oo much meaning realts from a fow wonde, and mo considerable a latitude in trandation is given to Inding words generally.
    [ + Fire-fly, fire- Ay ! bright litte thing, Light me to bed, and my mond I will sing. Give me your light, as youl fly o'er my bead, That I may merrily fo to my bed.
    Give the your light ober the gree an you creep,
    That I may joyiduly go to ray sleepCome jittle fire-fy -come little bearCome : and I'l make you to-morrow a feat, Conse little cabdie that flien an I sing, Bright little fairy-bug-nighe'a little king; Come, and I'll dumee an you guide met along, Conos, and I'l pay yoo, my bug, with a mag.]

[^10]:    *Sheggovian, a widow, and mowigh, smonething naty.

[^11]:    *The Uuited Stater government, the very next year, 1819, enat out Col Long to the Yellow Stue.
